That part of the spectrum is virtually all 'country option' so what it may be here, and it looks like an American radio from the freqs, will not generally apply in Australia. As I recall, that radio programs thru the mike plug so I assume you have access to the software and interface to program it.

The best I can do for you is refer you to http://www.vkham.com which while an Amateur site out of Broken Hill (vk is the Australian amateur prefix followed by a state number - Victoria is 3) that may have links to what you need or at least access to a local who can help.

Australia does have 40 channels in UHF on 25 kHz channels from 476.425 thru 477.400 with 1-8 and 31-38 paired for repeaters, 11 the calling channel and 40 the travel channel. In the US in non-urban areas you just blew up TV channel 15 to give you an idea of what I mean by country option frequency assignment.

Ask your spiritual advisor about PL or CTCSS which is a sub-audible tone system common in the US and which the radio will offer you programming options for; no idea if it is used in Oz. From the channel spacing, 5 kHz deviation looks to be normal.

Antennas for this band are all of about 15 cm for a quarter wave whip(preferable for repeaters) and even a colinear for the flatlands won't get over a meter. See what your CB dealer has to say.

Other services are a matter of regulation so I might suggest the Australian version of our Federal Communications Commission whatever that might be.

Sorry I couldn't be of more help but a local can do a lot more.

Dick NBK

Ouch!! This may not be as easy as I thought!! I was worried about the code, but. Just took QRZ.COM's practice test. 62% and don't ask me how. Use the minny moe theory allot. Can pass the Tech and Gen at 80% or above every time. Have notice that they repeat allot of question on that site though. After yalls suggestion to go ahead and take the extra anyway I have decide to go ahead and pass all three at one time. Any suggestion on code and extra written? Test is next Sat. Think I can do it?

2850. Re: Need help tuning SWR

Newsgroup: rec.radio.cb
Date: 2002-03-03 03:49:57 UTC
From: Lars Dennert <lars@larsdennert.com>
Message-ID: <F3hg8.31020$0C1.2545770@newsread1.prod.itd.earthlink.net>
Source record: 117061

15 years ago I used to be into CB's and I never could remember anything about the coax length other than don't leave it coiled. Why would they have units with no coax like portables, right?

Anyway I think the antenna is the problem. To Richard: Thanks for the step back and look advice. The front fender is the best of bad places on my vehicle. Granted the center of the roof would be best. The CB only has to reach a couple of miles to stay in touch with other four wheeling buddies. I took the spike out of the top of the antenna and put in a long peice of solid copper wire. Instantly my RF power jumped up.

I swapped the antenna for a telescoping center loaded unit that came with my now blown portable and the signal out was strong. The shorty Radio Shack antenna just wouldn't extend enough. I hate to pull the dash apart (again) to hook up the SWR meter and check it, but I'm pretty confident from the CB indicator that the SWR has significantly improved. When I was testing the SWR, the reading changed in exactly the same was as the CB indicated output as I made adjustments. Maybe the CB Cobra 18WXSTII something or another has a "SWR" meter of sorts built in.

Thanks for the continued help!

ok... where to start.. I unhooked my coax from the radio and ran a continuity check between the center and the shield. With my ohm meter set at 20k I came up with 9.87 ohms. Then i unhooked from my antenna and tested the same thing but got nothing.. other than that the coax checked out fine(center had continuity with .02 ohms and shield had continuity with .05 ohms). Then i screwed the coax back in to the antenna but i only plugged it in to the radio without the shield touching and my swr was about 1.2, but with the shield screwed to the radio it was over 3..... I grounded the pole my antenna is on to the ground wire running down my roof. But that didnt bring my swr down. What do you think could be wrong????? Thank you
Buck

I am getting sick to death of seeing this posting and think you should
all get on with your life.

As per this person be worried about his $65 and getting his radio I
don't blam him for a minute as money these days is hard to come by.

Like the old saying goes Buyer Beware....

Well, Google can't find any message posted by an author called "Radio
Ham" before 1998.

I suggest you're not being entirely truthful.

Usenet allows one to maintain a certain amount of anonymity. It's quite
possible that he has been posting since 1994, but not necessarliy under the
pseudonym of "Radio Ham" all that time.

True. However, it still somewhat invalidates his claim that "merely
looking at my postings will satisfy your meaningless challenge" when
he doesn't tell you who he *was*, doesn't it?

(I'll drop this now, what with me being a brain-dead CB'er and all.)

I've looked at your posted header info, and I don't see any
connection between the three. Just because several folks are
running an old version of Netscape and Win2K, you think they
are one and the same.

Did you stay home on Saturday night? Lack of a life? Too bad.

2865. This midwife delivers (OT)...

Newsgroup: rec.radio.cb
Date: 2002-03-03 13:25:07 UTC
From: Brainbuster <brain@buster.com>
Message-ID: <a5t9b1$b7a$1@newsg2.svr.pol.co.uk>
Source record: 117089

A young lady in the maternity ward just prior to labor is asked by the midwife if she would like her husband to be present at the birth.

"I'm afraid I don't have a husband" she replies.
"O.K. do you have a boyfriend?" asks the Midwife.
"No, no boyfriend either."

"Do you have a partner then?"
"No, I'm unattached, I'll be having my baby on my own."

After the birth the midwife again speaks to the young woman.
"You have a healthy bouncing baby girl, but I must warn you before you see her that the baby is black"

"Well," replies the girl. "I was very down on my luck, with no money and nowhere to live, and so I accepted a job in a Porno movie. The lead man was black."

"Oh, I'm very sorry," says the midwife, "that's really none of my business and I'm sorry that I have to ask you these awkward questions but I must also tell you that the baby has blonde hair."

"Well yes," the girl again replies, "you see I desperately needed the money and there was this Swedish guy also involved in the movie, what else could I do?"

"Oh, I'm sorry," the midwife repeats, "that's really none of my business and I hate to pry further but your baby has slanted eyes."

"Well yes," continues the girl, "I was incredibly hard up and there was a little Chinese man also in the movie, I really had no choice."

At this the midwife again apologises collects the baby and presents her to the girl, who immediately proceeds to give baby a slap on the bum. The baby starts crying and the mother exclaims, "Thank God for that!"

"What do you mean?" says the midwife, shocked.

"WHEW!" says the girl extremely relieved...
"I had this horrible feeling that it was going to bark!"

2866. New viruses discovered (OT)...

Newsgroup: rec.radio.cb
Date: 2002-03-03 13:25:09 UTC
From: Brainbuster <brain@buster.com>
Message-ID: <a5t9b2$b7a$2@newsg2.svr.pol.co.uk>
Source record: 117090

DANGER: new viruses discovered!:

Congressional Virus v 2.0 :
Runs every program on the hard drive simultaneously,
but doesn't allow the user to accomplish anything.

Tipper Gore Virus :
When you attempt to play any sound file, it pops up a
warning window stating that some lyrics may be
unsuitable for children.

Government Ecomomist Virus :
Nothing works, but all your diagnostic software says
everything is fine.

New World Order Virus :
Probably harmless, but it makes a lot of people really
mad just thinking about it.

Warren Commission Virus :
Won't allow you to open your files for 75 years.

David Duke Virus :
Makes your screen go completely white.

Pat Buchanan Virus :
Shifts all your output to the extreme right of your screen.

Texas Virus :
Makes sure it's bigger than any other file.

Adam And Eve Virus :
Takes a couple of bytes out of your Apple.

Warren Beatty Virus :
Constantly tries to prove it's virility by attaching itself
to younger or newer files.

Airline Virus :
You're in Dallas, but your data is in Singapore.

Freudian Virus :
Your computer becomes obsessed with marrying
its own motherboard.

PBS Virus :
Your PC stops what it's doing every few minutes to ask for money.

Kevorkian Virus :
Helps your computer shut down whenever it wants to.

Healthcare Virus :
Tests your system for a day, finds nothing wrong,
and sends a you a bill for $4,500.

LAPD Virus :
It claims it feels threatened by the other files on your
PC and erases them in "self-defence".

Michael Jackson Virus :
Hard to identify because it is constantly altering its appearance.
This Virus won't harm your PC, but it will trash your car.

And one for Dave to watch out for...
Billy Graham Virus :
When you save a file, it prints, "I am saved!" to the screen.

A man is stood in court as the charges were read out...

"On the charge of sexual assault, how do you plead?".
The defendant coughs and replies "Guilty, your Honour".

"On the charge rape, how do you plead?"
Again, the defendant coughs and replies "Guilty, your Honour".

"On the charge of unlawful intercourse with a 15 year old girl, how do you
plead?"
Once more, the defendant coughs and replies "Guilty, your Honour".

15 more similar charges were read out and each time, the defendant coughed
and replied "Guilty, your Honour".

When the defendant sat down, his lawyer leaned towards him and said " That's
a nasty cough you have... you should try sucking on a 'Fishermans Friend'. "
The defendant replies...

"F**k off, i'm in enough trouble already!!"

I is wondering wot you am not sure about.

A while back, there was a report on the news over here claiming that even
the queen no longer speaks "the queens English".
But then she only speaks once a year (Christmas day), the rest of the
time she just does that strange wave... like she's starting an old car
with a crank (no, I don't mean her hubby).

The UK government is planning some new rules for those that want to
come to the UK.
1. They must be able to speak English.
2. There will be an "American style" ceremony where they will pledge
allegiance.

About time. Why should we all have to learn every other language and print
leaflets, booklets, signs, etc. in every language known to mankind... at our
cost.
How many of them are willing to kiss our backsides, like we have to theirs?
I would not even consider moving to a country if I could not speak their
language, did not accept their way of life or did not accept their laws.

Some may see it as racist, but it's just common sense, and basic maths... why
should the majority of people have to learn every country's language and
customs just because one or two are too damn lazy to learn the language and
customs of the country they wish to live in?

But I cannot agree with kicking out those that have already been accepted,
they are now citizens. Nor do I believe in blaming them for accepting what
we offer, if you must blame someone, blame our governments who make
our countries sound so perfect and keep encouraging the rest of the
world to flood in.

The UK has problems with unemployment, people living in accommodation
not fit to keep an animal in, homelessness, and poverty... yet we still
project the image that the streets are "paved with gold" so more people
flood in. They don't show the people living in cardboard boxes and shop
doorways on the postcards!!

> >
> > You are the one complaining about fake names, not me.
===

I noticed that, once again, Sparky snipped the bits that didn't suit him, or
he had trouble understanding, like the quote that shows his buddy Aaron
moaning about people "not identifying themselves".

<quote name ="Aaron H. Voobner">
Illegal CBers would never come forward to take
responsibility, much less identify themselves.
</quote>

I have no problem with the use of "handles" or "nic-names", but if the
person who posted the above is using one (as his defence team now
suggest), then he is a hypocrite.

One rule for them, another for everyone else.
But others don't have to break the "akc rules" to be accused and called
"Keyclowns", just disagree with their tactics and that's a "crime".
You can even openly state that you use a legal radio and antenna,
with no amplifiers and advise those who ask that they should improve
their antenna rather than use an amp... but if you refuse to lecture
and use their terrorist type methods to fill the ng with tripe, then you
are a "Keyclown".

If disagreeing with the "akc" false accusations, sexual insults, foul
language, general trolling, etc makes someone a "Keyclown", then I
admit to it... Guilty as charged by the "akc" Kangaroo court.
If allowing others to make their own choice, then offering help
regardless of the choice they make and the equipment they use
makes someone a "Keyclown", then I admit to that too.

Good thing the REAL law is rather different from their idea of it.

If using legal equipment makes you go as crazy as the
"akc" mob, then I am off to buy the biggest
mother****er amp I can find.

===
> > "Of course, running away from the challenge is
> > indicative of someone who can't debate the point,
> > or is WRONG." ....Toll_Free
===

Or an indication that I have a life outside of this newsgroup, and more important things to do than be on here all day, every day... unlike the "akc" mob.
Also, it could be an indication that I have debated, even quoted previous posts... but the other person shuts his eyes (or gazes at the stars for a while) and snips them in the hope that people will not see how stupid his reply is. Nobody can debate with such a person...
You can lead a fool to wisdom but you can't make him think.

At least when I say I need to go off-line for a while, it's for real.

Thanks, Ill look into it

thanks a lot for your help

Anyone know where i can get a wiring diagram for this?

It used to be used in a security patrol company car.

I also need to know where to get the aerial for this, preferably the one
which sticks inside the window.

Is it possible to convert this to use the standard CB chat?

Thanks

Chicane..

You didn't say how you checked the swr, but having only one side of the coax attached to any meter isn't going to tell you anything since the 'return route' is disconnected so to speak. The meter is measuring reflected rf power. Check the swr at channel 1, channel 20 and channel 40. See if it doesn't change from the low end of the band to the high end. It is very likely the antenna length needs to be adjusted or that there is a dirty or corroded connection somewhere up there that is creating added resistance. Clean all connections. Higher frequencies need shorter antenna lengths, so given that, see if you can adjust the length. Avoid cutting anything unless you actually know what you are doing.

Hello Dick:

Last year while visiting NY and Washington DC on business for a few days, my plane was delayed due to a electrical problem. Watching out the window I could tell our flight was in trouble of making schedule, while observing the maintenance crew go thru their 3 stooges act, trying to fix a flashlight and then the Jet, I knew we where all in for some kind of a delay.

Maintenance crews where pointing in different directions, and it appeared that there was 4 more Jet fixer type of guys than needed.

The airline gave us all tickets for a free dinner at the local sandwich shop, that was very considerate, and just next door to the boarding gate, but also offered a front row seat to observe the maintenance crew try to repair the Jet.

To make a long story short, the air lines had just received a new Jet from a Canadian aircraft manufacture, the flight was only delayed a few hours, but I was only going up the road to NY, but others had connecting flights overseas, that where missed, tilt!

Yes I would have needed a few stiff drinkey poo's to get on board after witnessing all the "Heah Moe, ... Heah Larry" antics.

I offered my services to the Stewardess to assist the electrical maintenance effort, but just got a "Get Lost" look, and simi pleasant "We have it handled sir" reply.

Maybe I shouldn't have told her I could fix flashlights and was a bitchen guy?

Ask Radio Ham what name he used to post under in the time frame he
mentioned. I bet you won't get an answer.

In the small number of his messages posted in 1995, all replies to
other postings were either bottom-posted or had his answers
interleaved with the remarks he was addressing. Interesting, what?

Source record: 117084

Hello Guy: Yeah we all had a blast!

I can remember hauling off large pieces of equipment from the TRW Swap Meet, and playing with them after getting home.

I got pulled over in Down Town Los Angles once with a car full of radio equipment, in the front and back seat. The officer asked just where did I steel all the radio equipment. I told I had just come from the TRW Swap Meet and needed to rush home to get all this gear working. He got a kick out of that I believe and let me go, I was speeding Big Time.

We use to go up to Mount Lukens, Condor, Tujunga, and a few other Mountain Tops and talk all night and into the earl mornings, till sunrise.

I went with a few of the "Crazy Eight CB Club" guys who brought 5/8 ground plane antennas, generators for their Linear Amplifiers, and we had a ball.

Had a nice BBQ while over looking the hole San Fernando Valley and the Los Angles area, we could also see Catalonia Island, as well as the Channel Islands.

We could talk into Mexico, all the way past Bakesfield, and out to sea for at least a 100 miles. What a bitchen location. A lot of boats used CB back then, and we talked to them also.

Years before that, we use to 4 wheel drive up to the mountain tops and advertise the Local CB Breaks, on all the popular channels, and again had a blast! Many of the guys who showed up at the breaks wanted to meet the guy who he could hear from San Diego to Bakersfield.

Not everyone had a 4 wheel drive to get up the very rough roads. So this thinned out the crowd a bit.

I get a kick out of the antics of 435. When the 435 repeater goes down, all the other Hi Hi OM, repeaters get attacked. Even through I am in the Desert, I can hear most all the Big Time Los Angles repeaters, I just can't get into them. Its good thing to have the 435 repeater. Scott won't last too much longer, they never do.

I have a few of the "All time Great 435 QSO's" CD's and Cassette Tapes. There was even a record made, but its rare and hard to find.

> with 9.87 ohms.

When you use the 20K resistance scale, small values of resistance will
not read real accurately. Use the R X 1 scale, for those low resistance
measurements, such as in coax testing. Wiggle the coax when measuring
continuity and checking for shorts.

> Then i unhooked from my antenna and tested the same thing but
> got nothing.. other than that the coax checked out fine(center had continuity

Its possible the antenna has continuity, or a DC path between the center
and shield, and in some antennas this is normal. And for others it
indictaes a short somewhere.

> with .02 ohms and shield had continuity with .05 ohms). Then i screwed the coax

Hello Train: Happy Birthday!

Age is a way of thinking and acting on things, that before in youth may have caused concern.

When I put on my Ray Band "Blues Brothers" Sun Glass's, I can hear Led Zeppelin in the background. Bitchen!!!

We're am not getting older, We're are getting better. Rock on dude!

When I key down with my 8 pill, and I can hear loud feedback from some lowered Chevy playing "Thump de de thump" music, and the guys in the lowered Chevy pull over to see whats wrong, I know I have made a difference, its a great feeling!

So? All you've proved is there are a few people around this
town on this NG. Why do you think I'm "Scott"? How do you
know I'm not "Michael Caplan"? How do we know you're "George"?

I'm going back out now, just stopped in for a few moments, to see
just how little you have to do. Sorry to hear about the ball AND chain.

"Deb or Davie"!! LOL!!!

It also sux to be "George" with so much time on his hands.

I guess he thinks I'm "Scott" My mom calls me "Dave". I don't get it.

UHF (the 476-477 CB) yes, 27 MHz no. Thru-the-glass aerials more or less
work at this freq but a hood mount or raingutter mount (cars still have
them???) work better.

hi Jay.

"shooting skip" on CB radio means attempting communication with people who are operating similar radios very far away from you - usually with alot of help from the earth's ionosphere!

while such communication on CB is explicity forbidden by the FCC (they set a 153 mile limit on CB communications sometime in the 1970's i believe), many people choose to ignore this rule and try exclusively for the longest distance contact possible.

the "numbers" are usually a reference to membership in a CB "club" in the area, with the most common meaning of a number like "797" being "797th member in the local CB radio club".

there is also a national club known as the "Single Sideband Club" or SSB Club that issues callsigns based on your membership position in the club.

try this website and forum for more down-to-earth information on CB topics:

2910. IMAX 2000 or MaCo V58? (...or any other omnis?)

Newsgroup: rec.radio.cb

Hello all,

It's been awhile since I've posted on USENET. I hope you've all been doing well. Me? Work, work, and more work! I am finally going to put up a CB omni and can't decide whether or not to put up an IMAX 2000. I've owned the MaCo before and it performed...well, it performed like a 5/8 wave ground plane. I've heard really good things about the IMAX but I've also heard that it has a reputation for also radiating unwanted spurious emissions &/or harmonics a bit too efficiently. Yes, the old "splatter stick" allegation.

Now, I'll admit that the premise that an antenna can be responsible for any TVI &/or RFI goes against all reason. But I figure I'd ask the group for their opinions nonetheless. I've also had the old Antron 99 and never experienced any TVI &/or RFI related problems. Some opinions &/or experiences please? Take care and 73.

Mark

And there is the story of the new insurance claim guy who stopped off in a rural town to see the company's attorney in several cases. After each one, the rep asked the lawyer about the case and received the same reply, "We have a good case but remember the vagaries of the law, son."

This had gone on all morning and finally the lawyer told him he would treat for lunch. On the way they passed the county courthouse where the lawyer noted that there were two courtrooms. "Yup, remember old Sam Watkins was in both of the courts at the same time. His wife was suing for divorce on grounds of impotence and his girlfriend had a paternity suit against him. You know, son, he lost them both and that is what I mean by the vagaries of the law"

Outstanding explanation! I thought it was100 mile limit. I have been known to be wrong at times (wife says all the time) At times if I'm shooting skip you may hear me saying 724, this is my area code. Propagation happens some times without help also. On a clear night with the right conditions you may be able to talk hundreds of miles away.

I'm sure you DO love it when hams jam each other and create chaos,
Jay. The question is WHY you love it so much.

And there is the story of the new insurance claim guy who stopped off in a rural town to see the company's attorney in several cases. After each one, the rep asked the lawyer about the case and received the same reply, "We have a good case but remember the vagaries of the law, son."

This had gone on all morning and finally the lawyer told him he would treat for lunch. On the way they passed the county courthouse where the lawyer noted that there were two courtrooms. "Yup, remember old Sam Watkins was in both of the courts at the same time. His wife was suing for divorce on grounds of impotence and his girlfriend had a paternity suit against him. You know, son, he lost them both and that is what I mean by the vagaries of the law"

J

ENFORCEMENT: CB AMP PICTURES BRING STATION INSPECTION

A Northern California ham has had a visit from the FCC. This, after allegedly posting pictures on a website that purport to show his 10 kilowatt linear amplifier operating on CB Channel 6.

Agents from the Heyward, California office visited the ham on February 5th. At that time not only his Amateur Radio station, but all radio equipment was inspected.

The FCC says that a Notice of Violation will be issued. Meantime, the regulatory agency says that all of the antennas have been taken down and that no other details will be released at this time.

There is something about having the graduates sing Land of Hope and Glory when they fire up Elgar's Pomp and Circumstance #1 that appeals to my sense of the absurd. At most college graduations the appropriate ceremony would be to have the Grand Poobah steal your wallet as he handed you the diploma.

Perhaps the height of the absurd was reached by the Orange Order in Poland before they got out of the SSR game when they would gather and march to the zoo to sing Marxist/Leninist songs to the monkeys. This same group once evaded the police by opening a free truckload of sanitary napkins (not plentiful in Soviet times) losing the police in a stampede of charging women. That is artistry, man.

A lot of this 'patriotic' stuff reminds me of the Great Loyalty Oath Crusade out of Catch-22 which came to an abrupt end when Major deCoverley intoned 'Gimme Eat, Give Everybody Eat'.
Damnation, Under God, in a Dirigible. Some fathead is bound to invent an opportunity for God Save the Queen.

As I attend more funerals than granulations these days I rarely get the opportunity and it is not considered to be in great taste as Mark Twain once noted to 'express knowlege that taffy is being passed around'. When the God Squad insists on inserting some prayer in a graduation it would be mildly hilarious to have a squad start speaking in tongues and reduce it

to a shambles. Or simply sing quietly,' What a friend we have in Jesus, Christ Almighty What a Pal'

Beats hell out of pies in the face.

Try http://www.techren.net/mccall who babble vaguely about having one.

My sister went to school with Bill Fries who invented and was C. W. McCall
and despised country music. You get a bit of early Chip Davis in his
music including a few girlfriends on Wolfcreek Pass.

Whose retirement party is this for??

No doubt of the money but double nickles had more to do with CB growth.
It all got started when Old Home Bakery out of Sioux City hired his
one-man ad agency to sell bread in Omaha so he did a series of commercials
featuring C W McCall, and a waitress named Mavis at the Old Home Filler-up
and Keep on a-Truckin Cafe. The first time I saw one, my jaw literally
dropped as I was not living in Omaha at the time. At the time Midland CBs
were in Kansas and hired him to do their ads and he fell in with Chip
Davis of Mannheim Steamroller fame (you have heard him, you may not have
known it, every Christmas) and some of the less memorable songs of all
time - Wolf Creek Pass - came out of that collaboration. He had to psyche
himself up big time to do C&W.

Last I heard Bill was mayor in Ouray, Colorado at the foot of the San
Juans but I suspect he has moved on.

Well, I amn't sure, but I think I was moulded in a preference for the
Queen's English. BTW - amn't is a proper contraction. You are not may
properly be contracted as you aren't or you're not. He or she is not may be
contracted as he isn't or he's not, or she isn't or she's not. Try that
with I am not. Do not pass go, do not collect $200.00.

Be nice to Phillip. He may well be the coolest guy in the place. From a purely American perspective his conflicts with news guys are legendary and when the ABC guy pulled a Sam Donaldson and bellowed a question only to have his passport handed to him, you could see old Phil's hand in there.

When one of the princelings sent a reporter's camera thru the goal at a polo match you could see that Phillip taught them well.

There was a story circulating some years ago that one of the princelings was on a carrier and the Captain had a scramblephone to report to Buckingham Palace on his doings. Seems the other pilots took him to an obscure place and beat hell out of him. When the captain reported this, the voice on the other end reputedly said, "Good". Somehow that sounds like Phillip as well.

Do you think the RN might be available to shell Washington again? We have finally closed Fortress Monroe Virginia (only US military installation with a moat) so the way is clear.

Dick NBK

No good reason not to, nowhere is it written that the services are
mutually exclusive. Cheapest way to get a bong around here is to stand on
I-80 and wait for it to be tossed out of a van being stopped by an NHP
patrol car.

AM on the freeband?? Glorioski Buffalo Bob.

Definition of the toilet bowl
If 10,000 CB'ers all have brain damage
then only 1000 know what day of the week it is
& only 100 can tie thier own shoes
& only 10 can talk without drooling
This is a great example of why the bowl is for the weak minded!

Yep have been since 1980. I toured with a Jazz / Blues band called
Flash Point for a year or two. While in NYC last fall I got to sit in
with a band at the Blue Note in the village. Music is how I deal with
my frustrations and anger. If it wasn't for being able to beat the
hell out of drums, some people would most likely be in the hospital
heheheh.

The ONLY thing this has to do with CB is that the CB band is where it
happened in the frequency spectrum. Just another BAD HAM doing stupid shit
and getting busted for it.

Note that you still avoided answering the very direct question, which,
in it's own way, tells enough already.

>
> If you interpret that as an insult, that's your problem.
>
> -The problem(s) are all yours, Dave. This apparent one has to do with

Try to tell a nut that he's nuts and he'll swear you're crazy. You
really do need to look in the mirror a bit more often, especially with
regard to what's considered "hypocricy".

>
> Illegal operators are inconsiderate to other people on the band.

>

> -Tht's like asking if someone was against sunshine. What kind of
> question is that?

A very direct one. One that a "Yes" or "No" answer will suffice.

> I willl state unequivocally for you that I don't condone rude, boorish behavior,
> anywhere. Or splattering the spectrum, or interfering with others. etc.

Wow! Finally, an answer to my question. Then if you truly feel this way,
then how can you support the position of many other people who flaunt
their butchered up radios and high powered setups, which regularly
interfere with other people, like a badge of honor?

> But see, Dave, you already know this,

Do I? How could I, you never make a concise direct point. You babble and
obfuscate with the skill of a politician. You remind me of Clinton
trying to ascertain what the definition of "IF" is.

> But judging by the way you fight tooth and nail and say usenet is no
> comparison, I wonder if you are capable of returning an answer....so, we
> can all draw an inference that you DO condone that type behavior on
> usenet, hmmm?

I avoided the USENET issue simply because it is not related to the
problems of illegal radio operators and their seeming indifference for,
and interference to, the other users of the band.

But since you finally (I think) answered my question, I'll endulge
yours. I am against any activity that violates the intent of a set of
rules or regulations. People who violate the spirit of USENET deserve
the same contempt as those who interfere with the users on CB (or Ham).

without showing your hypocrisy, Dave. Smarten up.

Mr Pot, meet Mr. Kettle.

> I did, and it still says nothing other than you're inability to answer a
> simple basic question without attemting (However unsuccessfully) to
> steer the core issue into an unrelated area.
> I'll say it again. I don't care what people do on USENET or any other
> hobby right now.
>
> -Stop being so selfish and look beyond yourself. It isn't about YOU.
> Many others ARE concerned about it, just because you aren't doesn't mean
> the rest aren't.

That's all well and good, but that's ANOTHER topic, not this one. This
one concerns behavior on RADIO. IF you want to debate USENET abusers, go
to alt.ubuse.USENET and start your own thread there.

> -Now you are trying to dictate what another does. See Dave, you have a
> power issue,lack of control, you feel helpless over others and it
> apparently bothers you to some degree.

Inconsiderate behavior does bother me. Why should the actions of a relatively few selfish people be allowed to ruin the fun for the rest of the users? To some degree I am helpless to do much about it, other than in my own immediate area. I am counting the days to when the skip cycle ends, so that I don't have to hear the B.S. from every other mud hole in this country.

> I did you the courtesy of
> answering your bogus question, indulge me and answer mine, or are you

I see that you can't recognize an example of the type of "upstanding" behavior that passes for CB traffic these days. Something that is most definitely "on topic"

>
> Deliberate overpowering other people's conversations without due
> consieration is also acceptable behavior?
>
> -You have done just that each time usenet behavior was presented for you
> to comment on.

How can one "overpower" someone on USENET? And you wonder why I want to know if you're on drugs?

> C'mon, you can do better than that. You're starting to grab straws now.
>
> -I'd rather debate your flawed interpretations of rude and inconsiderate
> actions and whatever else you deem it, when applied to usenet.

Maybe if I took mind altering drugs, I'd make more sense to you. But then I'd lose my perception of reality as well.

>
> I'm sure you would as it steers you away from the main issue, and takes
> the heat (somewhat) off of you. But I'm not biting.
>

> -True to fashion, you suffer from delusions of grandeur as well.

Interesting choice of words, from someone who seems to live in a
different world, where being rude and inconsiderate are acceptable, and
arbitrarily breaking rules is encouraged.

> Which reminds me yet again, Are you on drugs? The world waits with
> baited breath for the answer.
>
> -Delusional, Dave, double d, kinda has a ring to it, no?

The apple never falls far from the tree. One of us definitely IS
delusional. But there are 12 step programs to help recover from these
maladies. Like I said before, try to tell a nut that he's nuts, and
he'll swear you're crazy.

> But I assure you, I have no interest in playing silly forged post and
> troll games.
>
> -Who mentioned anything concerning forges? Your uncanny inability to
> remain close to topic belies your other talents.

You seem to think that anyone who doesn't share your ...er "unique" view
of the world, and is vocal in telling you about it, is yet another
"forge" of N8 Doug, or Leland. You once accused me of being a
"multi-NIC".

Paranoia is a common affliction when someone is high on something.

> You can argue legality, and your "right" to ignore a rule, based on some
> misguided sense of "consciencious objection",
>
> -Conscientious objection applies only to the military.
>
> Note the "" around the term. It implies a figurative interpretation.
> Nonetheless, the point is valid.
>
> -I won't educate you concerning the term.

That's good, because you completely missed the point and any "education"
that you might have would be skewed beyond relevance.

> -Never claimed I did. What I do hold, is I have as much right to break
> the rules as you do to enforce them.

Tell that to the judge.

>
> especially when it disrupts other people that are attemping to follow
> the rules.
>
> -Again, this is more window dressing and innuendo from the trollup camp.
> I never claimed such.

But your actions speak volumes. Why insist that you have the "right" to break the rules of society, if you don't intend to do it?

> Certain laws may be outdated, but courtesy never is.
>
> -Your definitions have been questionable

By you maybe, but not to people who still have some common courtesy, and aren't on some controlled substance.

Well once again Twisted you have very amply demonstrated your total lack of reading comprehension skills. Figures since you're technically illiterate anyway. Nobody has proposed that a Freebander put a beacon on 10m. What a dumb Putz. The discussion was about monitoring a "Ham 10m beacon" to gain propagation information about the 11m band since the two are so close in frequency, by a 600 KHz or so.

Now that is really funny Tim. So you don't mind being associated with the ideas that sprew forth from Dave-Debbie's keyboard?

> now i know this concept is hard for you because nobody ever agrees with you

Hey Tim it's in fact hard for you to swallow the fact that people really do agree with me. I know it bugs you to no end when that happens.

Yeah, I don't recall him denying it at the time either. Tim can't tell a forged post from the real deal. He has accused me of forging posts, and from my end here I know for an absolute fact what I post so I know he's full of it because I never have done so. However Tim can't figure out if a post is a forgery or not, and neither can his buddy Twisted from my point of view. Since Tim, or Twisted can't tell a real post from me, and one forged with my name etc., neither one of them has any creditability to make a claim that the Twisted "saucer man" and "jock strap" post" is a fake. Of course Twisted would deny it. He's embarrassed he ever wrote it, and will do or say anything, even lie about it, to make it go away. And of course Tim is clueless, so he just parrots whatever Twisted says.

I wonder what would happen if say a ham did put a beacon on 10 meters and one on 11 meters. Both running at the same power output into the same type of antenna, up the same height, and from the
same location. Then we could really see if the bands was open at the same time. I would think that with the MUF moving up or down that there would be some lag between the two. You might be able to hear one before or after the other. A simple half watt to 1 watt beacon could be made really easy and cheap. This would make for a great experiment.

The exams are designed so that different areas get covered on one exam. For example FCC regulations, station operations, electronic theory, RF safety etc. The group of questions, for each area, is pulled from the general question pool. Study the questions for the area you feel most comfortable with until you get it down perfect. The rest you can try guessing at. The Extra exam combines elements from the old Advance and Extra Class tickets to make the new exam. Many Hams say the old Advance written exam was the hardest exam out of them all to take. Good luck.

I hate to disagree with you Aaron. You should check out the FT-817 group on Yahoo. There are a large number of Hams who want to know where they can find a nice 50 to 100 watt H.F. amp to use with the 817, which by the way is an all band all mode QRP rig made Yaesu. These Hams may operate the rig as a "Base" when home and operate QRP when portable. Some may just want an occasional boost, but don't need the burden of a built in high power amplifier. Seems like many Hams have opted for the amps made by Tokyo High Power for the above reason. Since the company does not sell equipment in the USA several Hams have come up with various ways to import the amps in to the USA.

http://www.yaesu.com/amateur/ft817.html
http://www.qsl.net/ku4qd/thp/

I'm sure somebody wants to know why not buy a rig like the IC-706 or FT-100 for portable work, and just turn the power down. Well that does work however the current drain is still around 2 amps even on RX. When you're operating on battery power that makes a big difference. Also when you have to "backpack" everything in to the woods you don't want to carry a huge RV battery just to operate for a day. Now a QRP rig with an external amp is different. When you don't need the high output power you switch off the amp. The reason why this is different than the case above has to do with the idle current being conducted by the power transistors in the amp, necessary for linear operation. The idle current can range from a few hundred milliamps to several amps in a large amplifier. The idle current flows whenever the amplifier is turned on, even if you're not transmitting. Thus an external amplifier helps a QRP operator to better manage the total current draw of his portable station to maximize his operating time by turning off sources of current draw that are not needed. When using rigs like the IC-706 or FT-100 you don't have the option of turning off the main power amplifier section to conserve on the current draw.

From: nojunkmail_n3cvj@worldlynx.net (Dave Hall)
Twistedhed wrote:
I asked (axed?) you if you were on drugs. A legitimate question. One in which you have neglected to answer.

-Everyone is on drugs, Dave, whether it's Lelnad for his high blood pressure or someone with their coffee or chocolate habit. Do try to stay on topic, once again old boy.

Note that you still avoided answering the very direct question, which, in it's own way, tells enough already.

-If that were true, you wouldn't be obsessing on it, now would you? <g>

If you interpret that as an insult, that's your problem.

-The problem(s) are all yours, Dave. This apparent one has to do with you delving into my personal life and off subject and topic. You are a hypocrite from the word go, Dave.

Try to tell a nut that he's nuts and he'll swear you're crazy. You really do need to look in the mirror a bit more often, especially with regard to what's considered "hypocricy".

-My level of comfortability with myself apparently bothers you, as does my belief in God. THAT, speaks plenty and tells us all we need to know.

Illegal operators are inconsiderate to other people on the band.

-LMAO. Your eyes are brown, Dave.

None are so blind as those who refuse to see.
If you condone illegal operation, by default, you are also condoning inconsiderate behavior.

-Then you condone usenet rule breaking....oh, but by default of course.

Another attempt at not answering a direct question.

-I have indeed answered I do not condone "inconsiderate" behavior. Your comprehension deficit is manifesting. You still havent mentioned what type linear you would recommend. It appears it is YOU that avoids answering the questions....

That's not what I've been trying to illustrate. You try to make the case that since "some person" breaks "some law" that it's ok for you (or other CBers) to be rude and inconsiderate to other CBers.

-Not true. You made the analogy when you were asked to apply your own moral logic.I never claimed it was "ok" to do what you suggest.

So you are against rude and inconsiderate behavior on the CB?

-Tht's like asking if someone was against sunshine. What kind of question is that?

A very direct one. One that a "Yes" or "No" answer will suffice.

I willl state unequivocally for you that I don't condone rude, boorish behavior, anywhere. Or splattering the spectrum, or interfering with others. etc.

Wow! Finally, an answer to my question.

_Now, let's see if you will return my kindness and be so considerate, or are just trolling.
Number 1: What type linear is it that you recommend?..and no. 2 : When your logic concerning behavior is applied to usenet, (After all, behavior is a SOCIALLY ((your words)) accepted standard) how is it you fail to see those that have pandered to you during this thread are doing a disservice by intentionally trying to denigrate others and continually violating usenet protocol?

Then if you truly feel this way, then how can you support the position of many other people who flaunt their butchered up radios and high powered setups, which regularly interfere with other people, like a badge of honor?

-See, I never did that , Dave, and this tactic you have now lowered yourself to is the same one Lelnad uses, one of fraudulent accusations with not an ounce of truth.
.
But see, Dave, you already know this,

Do I?

-Of course you do, you are now a bonafide troll. Congratulations on your new staus and acceptance by my other followers. Contact Lelnad for the newsletter.

How could I, you never make a concise direct point. You babble and obfuscate with the skill of a politician. You remind me of Clinton trying to ascertain what the definition of "IF" is.

-You have way too much time on your hands, son.

But judging by the way you fight tooth and nail and say usenet is no comparison, I wonder if you are capable of returning an answer....so, we can all draw an inference that you DO condone that type behavior on usenet, hmmm?

I avoided the USENET issue simply because it is not related to the problems of illegal radio operators and their seeming indifference for, and interference to, the other users of the band.

But since you finally (I think) answered my question, I'll endulge yours. I am against any activity that violates the intent of a set of rules or regulations. People who violate the spirit of USENET deserve the same contempt as those who interfere with the users on CB (or Ham).

-Yet you have demonstrated a favorable pandering to these types. Interesting.

  without showing your hypocrisy, Dave. Smarten up.

Mr Pot, meet Mr. Kettle.

I did, and it still says nothing other than you're inability to answer a simple basic question without attemting (However unsuccessfully) to steer the core issue into an unrelated area. I'll say it again. I don't care what people do on USENET or any other hobby right now.

-Stop being so selfish and look beyond yourself. It isn't about YOU. Many others ARE concerned about it, just because you aren't doesn't mean the rest aren't.

That's all well and good, but that's ANOTHER topic, not this one.

-Such as drugs, which you tried to steer the conversation to, among the myriad of other attempts you failed with.

This one concerns behavior on RADIO.

-But your "human social acceptable standards" doesnt? Please. it applies to all facets of life, you just had a slight problem admitting it and seeing that it does indeed relate to usenet.

IF you want to debate USENET abusers, go to alt.ubuse.USENET and start your own thread there.

-Now you are trying to dictate what another does. See Dave, you have a power issue,lack of control, you feel helpless over others and it apparently bothers you to some degree.

Inconsiderate behavior does bother me.

_Well, my chum, if asking your opinion of a standard that you brought up is taken as "inconsiderate" by you, it is a great presentation of a severe case of anal retentiveness.

Why should the actions of a relatively few selfish people be allowed to ruin the fun for the rest of the users?

_That indeed can be applied to usenet. Your refusal to acknowledge it lends more credibility to the opposite of whatever it is your cause without reason is.

To some degree I am helpless to do much about it, other than in my own immediate area. I am counting the days to when the skip cycle ends, so that I don't have to hear the B.S. from every other mud hole in this country.

I did you the courtesy of
answering your bogus question, indulge me and answer mine, or are you
that rude, inconsiderate and confused of other's that you refuse to
comment on usenet?

See above
The definition of rude, inconsiderate (and the rest of the adjectives
that describe outlaw CBer's attitudes toward the rest of the operators
they aren't "buds" with) is pretty much universal.
-I',m certain among the company you keep, it may very well be,
"universal", but you professing to speak for the people around the world
is comical so and far removed from the truth that it is lost upon you.

Telling someone to go "shit in his hat" is considered acceptable
civilized behavior somewhere in the world?

-Whaaaa? You are off topic again, beginning to use profanity, and appear
to be posting in direct relation to your emotive responses.

I see that you can't recognize an example of the type of "upstanding"
behavior that passes for CB traffic these days.

-As I reiterate, your tactic of pointing to another's behavior to
justify your own is a failure and true to the troublemakers among us.

Something that is most definitely "on topic"

-No, it wasn't until now when you brought it up.. You appear to have
several MO's and plenty to say, but demonstrate a slight problem with
conveying exactly what you mean.

Deliberate overpowering other people's conversations without due
consieration is also acceptable behavior?

-You have done just that each time usenet behavior was presented for you
to comment on.
How can one "overpower" someone on USENET?

-Flood.

And you wonder why I want to know if you're on drugs?
-No, I don't wonder at all..I realize it is your inability to debate the
issue so you must resort to whatever you feel will aid your agenda.

C'mon, you can do better than that. You're starting to grab straws now.

-I'd rather debate your flawed interpretations of rude and inconsiderate
actions and whatever else you deem it, when applied to usenet.

Maybe if I took mind altering drugs, I'd make more sense to you. But
then I'd lose my perception of reality as well.

I'm sure you would as it steers you away from the main issue, and takes
the heat (somewhat) off of you. But I'm not biting.

_Where did THAT come from?

-True to fashion, you suffer from delusions of grandeur as well.

Interesting choice of words, from someone who seems to live in a
different world, where being rude and inconsiderate are acceptable,

-You and the dog pound continually repeating it won't make it any more
so. Lelnad has been trying for years and look at how he is looked upon
now.

and arbitrarily breaking rules is encouraged.

Which reminds me yet again, Are you on drugs? The world waits with
baited breath for the answer.

-Delusional, Dave, double d, kinda has a ring to it, no?

The apple never falls far from the tree.

-Are you saying your mother or father was delusional as well?

One of us definitely IS delusional. But there are 12 step programs to
help recover from these maladies. Like I said before, try to tell a nut
that he's nuts, and he'll swear you're crazy.

-I dunno, I'm not qualified to tell someone that and neither are you,
but you appear to enjoy engaging in such behavior.

  But I assure you, I have no interest in playing silly forged post
and troll games.

-Who mentioned anything concerning forges? Your uncanny inability to
remain close to topic belies your other talents.

You seem to think that anyone who doesn't share your ...er "unique" view
of the world, and is vocal in telling you about it, is yet another
"forge" of N8 Doug, or Leland.

-It usually is, but you are just another "fan" that is a Johnny
come-lately.

You once accused me of being a "multi-NIC".
Paranoia is a common affliction when someone is high on something.

-Wow. Count your unfounded accusations and you should be investigated by
the DEA, going on that logic.

You can argue legality, and your "right" to ignore a rule, based on some
misguided sense of "consciencious objection",

-Conscientious objection applies only to the military.

Note the "" around the term. It implies a figurative interpretation.
Nonetheless, the point is valid.

-I won't educate you concerning the term.

That's good, because you completely missed the point and any "education" that you might have would be skewed beyond relevance.

-You erred on the point and now are expressing anger over my calling attention to it. Get used to it.

-Never claimed I did. What I do hold, is I have as much right to break the rules as you do to enforce them.

Tell that to the judge.

-The judge isn't crying me rivers concerning it, you are.

especially when it disrupts other people that are attemping to follow the rules.

-Again, this is more window dressing and innuendo from the trollup camp. I never claimed such.

But your actions speak volumes.

-What "actions"? You know nothing of my actions other than what I allow, so you lie and accuse like the rest of the few dogs that I kick around on a regular basis. Get used to that to.

Why insist that you have the "right" to break the rules of society, if you don't intend to do it?

-If you wish to debate the etiquette of "society" and overconcern yourself with what I think, take it to email or find a proper forum. Better yet, concern yourself less with what other's believe.

Certain laws may be outdated, but courtesy never is.

-Your definitions have been questionable

By you maybe, but not to people who still have some common courtesy, and aren't on some controlled substance.

Dave

-Your innuendo and inferences are on par with just what we have all come to expect from you. You have not disappointed. Enjoy.

I kinda figgered you'd have them blasted deer flies down there,
too---the kind with the wierd
looking wings. I swear, you cannot kill the devils unless you are
willing to knock yourself out
as well! Smack one of 'em hard enough to leave your hand print on your
leg, and the ******
'll just fly off like nothing happened! Oh, they have this crazy sort of
grass down there I had never seen before.
When I first walked out into the yard, I kept tripping over something,
but
at first, I couldn't see what it was. Then I looked closely, and there
was this wierd "grass" that
grew outta the ground in one place, sprouted shoots of leaves(?), or
whatever, then grew BACK into the ground a few feet farther along. This
"runner", or whatever it was, was what I
kept hooking my feet in.

-Yea, our wonderful crabgrass that feels like wax.

Then I looked down again and discovered to my horror that my feet
and ankles were covered to blackness with huge mosquitoes. Da heck wid
dat!! But, I had
to endure for 4 years until I could escape from there. I venture down
there, oh, once every 8 years or so to visit. Shows you how anxious I am
to go down there.

-They either love it or hate it..I actually wish more shared your
sentiments..it's getting too crowded for my likings...yankees movin'
here more each day.....which one would think would be GOOD, but they are
coming here flat ass broke from their former states. The yankess come
here and try to do things the way "we did it up north" and when the
piper needs paid, we hear, "Those damn Floridians." Gotta love it.

I never thought to get autographs or keepsakes from Jimmy (Catfish). I
mean, he was around
so much during high school, I don't think any of us that knew him really
thought about it.

-Matt Geiger (Retired Basketball Pro and from right up the road over
yonder)) went all through school with my buddy's son and it's pretty
much the same with him. And speaking of Matt, he just had a Bison escape
from his ranch and take to the wilderness area on the opposite side of
my town. He was finally subdued after a night in the swamps, unharmed.

However, Helen signed my Senior year annual as Helen Overton Hunter, so
I *did* get some-

thing, although it wasn't meant as a souvenir---we were just kids about to launch out into the world to "conquer" it, signing annuals, saying goodbye, and just being friends. So, in spite of
the fact that Catfish was a budding baseball star, we just didn't think of him that way. It was
like, "Hey, Jim, nice to see you", and "Hey Jerry, what's been going on?"--stuff like that. And
Hertford is just such a small town out in the middle of the eastern flatlands, everybody just knew everybody.

-Same here, only not as much anymore. I can count over two dozen condo COMMUNITIES that have went up around me in the past few years.

After almost 20 years, I went down there for a visit (1987) and walked into a country store. The girl behind the counter had been in about the 9th grade when I graduated.
She just said, "Hey, Jerry, how ya doin" like I had never left! She probably didn't even KNOW I left. LOL!

What's up stranger?

Hmm, The MACO "Alpha" V58 was my second base antenna. I personally liked the antenna. I enjoyed great performance, both on transmit and receive. The one peeve I have is the poor quality of the hardware. If you go with the V58, you'll want...no, NEED to swap all the hardware with stainless steel examples. Replace every last u-bolt, clamp, nut, bolt, and washer. Drop a "hood" on the solder side of the SO239 "chassis" connector and apply the sealant of your choice where the wire exits the hood. I think you'll be happy with it.

If you decide to go the IMAX-2000 route, call me first and you can have mine...real cheap. It's NIB and collecting dust in my basement. I never got the opportunity to erect it so I can't advise you re. the RFI/TVI issue. I don't think an antenna can really be the cause of RFI/TVI. (But I've certainly been wrong before...more times than I'd care to remember.) It certainly looks to be built well though.

I do have a question that I think Jay might be able to answer. MACO offers a V5000, which is the 5000 watt handling version of the V58. I called Majestic and was told that the ONLY difference between the two was a teflon insulator between the base tube and the first radiating element tube as opposed to the standard plastic piece. For this the price raises from approx. $60 to $100 plus. Have you ever seen one of these, Jay? If so, is the teflon piece molded any better than the

plastic one? For the record: Yes, Aaron; 12 watts on CB and 1500 on 10.

No problem with a disagreement. My point was that Ten Tec does not
sell their amps to 'solve' the low output 'problem' of their QRP rigs.

The person who buys a 5-watt qrp ham rig does not immediately start
fretting about not having enough rf power (LOL).

Thanks for all the encouragement from everyone!! I am sure I will get the written elements by next weekend, but I just can't seem to make myself study the code. For some reason I just can't make it exciting like the written. I think I am going to have to get a receiver only and listen maybe that will put the fire under me. Hate to spend the money on just a receiver though when I know soon I will need a trans to.

Pick up a SW radio, that will allow you to listen to HF w/o the cost
of an expensive reciever.

IF you want to debate USENET abusers, go to alt.ubuse.USENET and start
your own thread there.

-Now you are trying to dictate what another does. See Dave, you have a
power issue,lack of control, you feel helpless over others and it
apparently bothers you to some degree.

-Whaaaa? You are off topic again, beginning to use profanity, and appear
to be posting in direct relation to your emotive responses.

How can one "overpower" someone on USENET?

-Flood.

Another lame excuse who is flooding the NG ? If you don't like the posts
don't read em. But Ill ask again where are all the flood posts on the NG?
What year did they happene? Still reverting back to childhood days Twitsy?

-You and the dog pound continually repeating it won't make it any more
so. Lelnad has been trying for years and look at how he is looked upon
now.

Just because you say it doesnt make it so, Speaking for everyone agin
twisty? .You are looked down upon as being a blabbering incomprehensive
buffon who cannot put 2 intelligent sentences together.

-Never claimed I did. What I do hold, is I have as much right to break
the rules as you do to enforce them.

You have no rights when it comes to breaking FCC Rules. Cite an example of
these rights you Claim. Do you know anything about Dave perhaps he works for
the FCC. Again Just because old Twitsy say it doesnt make it so
+

-Your innuendo and inferences are on par with just what we have all come
to expect from you. You have not disappointed. Enjoy.

And your idiotic "Just because you say it doesnt make it so" posts have not
dissapointed anyone either. Do you now speak for everyone? I am wondering
who are you refering to "We" have all come to expect" . Nah your not
qualified to speak for anyone.

Problem: No ground plane. Make a 1/2 wave dipole and then add 3 more ground radials to the shield spaced at 90 degree angles to the other ground radials, and try to dangle the ground radials at a 45 degree angle. The length of the wire for one of these radials is about 108 inches. This will be resonant at CB frequencies. How well you get the ground radials to the preferred 45 degree dangle will determine your SWR. 45 degree angle, 50 ohm antenna. 90 degree angle, 30 ohm antenna. 30 ohms will be about 1.6 SWR. The SWR is a ratio showing the amount of mismatch between the coax and the antenna. Resonance will be more efficient then 1:1. Coax length does NOT matter.

Well you seem to be able to get coax outside which is half the battle and avoids having to run it out the porchlite anyway. I am going to assume that you have the inevitable 8' deck about 8' below your upstairs 8'deck. which means you can run a loop. It is easier on 10 meters with a 32 foot length where CB is 36 feet so bend it back along your upstairs deck to take up the slack. Hide the coax along the rail, feed without a balun but seal the hell out of the coax and blast away. A metal rail is a bit of a bother but not a bad one. Select a wire that hides good.

Not a fantastic solution but not a bad one under the circumstances.

And whoever told you coax length was significant to SWR make him eat the present antenna.

Dick NBK

Oops I did want to add this transmission line attenuation improves the SWR of a load or antenna. For example, a transmitting antenna with a SWR of 10:1 (poor) and a line loss of 6 dB would measure 1.5:1 (okay) if measured at the transmitter. Other than that coax length doesn't affect SWR after the antenna is tuned and checked at the feedpoint.

You didnt answer the question, Toll Free has a ham license. He also admits to running Major Power on 11 meters and he makes no bones about it perhaps he was the ham who got popped? But the question remains what would you call him a Ham or a Cber surely you can answer this question with out the two step back shuffle.

As the terms are not mutually exclusive you can use neither or both. You simply framed the question wrong.

Personally, sounds like we have an idiot who, posessing an Amateur license, did something incredibly stupid on or near CB frequencies. So it would seem that we have a few good adjectives and qualifiers but only one real noun, Idiot.

Given that he is out posting it, we might also add ego-driven, loudmouth idiot.

Check the Rain Report Sunday.

Want to buy a used but in VERY good to EXCELLENT condition faceplate assembly for an older PRO-48 crystal scanner by RadShack.Will also consider one from a PRO-47 (will work but PREFER the 48 one.)
Will also consider buying entire NON-WORKING PRO-48 with good to A-1 cosmetics if you have one that's broken.
Please Email me directly with what you have and price in first Email. ALL replies answered.
Many Thanks for any help U can provide !

Bullshit. One of the great enduring myths of CB and it is 100% condensed kraut.

Well, maybe not 100%:

1. Sheer copper losses in very hi-loss situations will make your SWR look better than it really is.

2. If you are using a tuner, having it at a voltage or current node with a really crappy SWR can either exceed the range of the tuner or cause some really interesting arcing and smoking. But velocity factor applies so nine-foot increments are almost guaranteed to be the wrong length.

3. If you have a crappy ground at the mobile antenna or a really bad decoupling problem coax length may make a diff in the level of rf in the shack. There are a lot of better ways to handle common mode currents.

Give you the patch cord tho, they are notorious.

You don't see a damn thing. None of u know the circumstances behind the sale of the radio, but that hasn't stopped u making outrageous judgments about people you have never even met. The man has his radio - let it go. (Either that or I strongly suggest you take up a more rewarding hobby). You all have WAY too much time on your hands.

I would run an ohms check to make sure your cable is not shorted
between the center and the ground(shiled with the coax disconnected.
If that is ok then i would check the center to center of each end of
the cable with an ohm meter to make sure you have continuity. if that
is fine then you might either need a bigger outside antenna or move
the antenna away from you more.

Hello Bert:

The Teflon Insulator is the only difference in the V5000 as compared to the MaCo V5/8, that I have seen. Go out and price a stick of Teflon round material, which is probably around 5 dollars a inch, plus machining costs, and the Teflon Insulator comes out big time expensive.

The Teflon Insulator has a much higher voltage breakdown rating than the Plastic Insulator. So I am sure it will handle more power.

However other considerations must be taken into account. The bottom 5 inches on the vertical element are inside this insulator, and the insulator is inside the base assembly tubing, that is at ground potential, resulting in a lot of Capacitance, which is loss, big time. This is why the Interceptor 10K uses a Elevated Vertical Element design to reduce the loss's in the base assembly.

The vertical element inside the Insulator, that is inside the Base Assembly Mounting Tubing, regardless if its Plastic or Teflon, will in time collect residues that are conductive. Morning Dew, rain, wind with dust and dirt particles, will collect. In time the close proximity of the vertical element, Insulator, and base assembly will break down and offer a path for the high voltage to arc over at some point in time with high power. Because energy is travelling thru the Insulator, because its a Dielectric of a Capacitor, will make the condition worse.

Andrews web site has a photo showing a Insulator at a high power transmitting antenna, that arced over and was damaged because deposits collected on the insulator and caused the arc over, destroying the transmitting antennas insulator. There is a time maintenance requirement to clean the Insulator at lease every 30 days for most high power transmitting antennas base insulators.

When you get up to the 5 to 10 KW power levels, its a different world.

The SO-239 connector, being sealed is a good call. I use Black Silicon RTV Rubber.

Sealing the base assembly with the Black Silicon RTV Rubber, to keep out contaminates is also a good call.

Jay in the Mojave

CW is just another language to learn. After you have learned to recognize the letters at an incredibly slow speed, get a tape or cd with random characters at varying but faster and faster speeds. Do at all costs avoid learning the stuff by counting the dits and dots. That truly is suicide and will result in ultimate failure. You have to learn the sound the letter makes, and frankly that is hard if it is slow code. It's very do-able though. Think in terms of learning conversational French or German and you'll do fine. 15 minutes in the morning, 15 minutes in the evening, and if you have a player in the car, copy code going to work or running an errand. At 5 wpm, the code is dumbed down enough that even Trigger could tap it out with his hoof.

Tim & Twisted have carved a path of forgeries and deception together.
They are in so deep they can't get out even if they wanted to. Note
that the "saucer man" posts reek of a pothead at the keyboard. At
least Tim admits his drug dependency, but poor Twisted is still in
denial.

Myth. Think about it a bit. If the length were critical, then you would
have to specify the type of coax - as they have different velocity factors.

Changing the length of coax may provide a better match for the radio, but
it will NOT affect the SWR.

Fix your antenna length.

If you don't pass the code, you won't be able to take the higher level
exams. At least, not officially.

Forget the written part for now, and concentrate on the code. Even if that
were all you passed, you would have a year to pass the theory parts, without
having to retake the code test.

Buy a transceiver, if you can find one. There is no law against it. If it
is from a ham, and he is leery about selling it to an unlicensed person, at
least show him that you are working on the code and demonstrate that you
have some of the questions memorized. He might change his mind.

Source record: 117389

I have read all the posts on SWR. Let me first say I am not an expert!!!

From what I have read.

some people think low SWR means a match between trans. and antenna.

some people think that high SWR means high standing wave.

Here is my opinion from what I have read and believe.

If your SWR is high on channel 40 and low on channel 1 your antenna is to long for all around C.B.

If your SWR is high on channel 1 and low on channel 40 your antenna is to short for all around C.B.

If you have high SWR due to antenna mismatch. (i.e. 50 ohm trans. and 30 ohm antenna) coax length will make a difference only if you are using 75 ohm (T.V.) coax.

If your are trying to cophase then coax length make all the difference in the world no matter what ohm coax you use, because you must feed cophased antennas "in phase" for the to work under most circumstances.

If you have a 50 ohm trans. and a 50 ohm antenna coax length is not going to change SWR, only antenna length will help.

someone correct me if I am wrong!

now I have question

while checking SWR on my radio I noticed

1. while the signal (carrier) is modulated SWR is higher (AM)

So the question is

How do you know where to check SWR, at carrier watt or at full mod watt?

What a poster

for the most part I can say he/she/it is an ass.

but I must also say he/she/it has made one reply to a post of mine that was not assholeish.

Aaron I must say you still have a chance to prove yourself worthy in my book.

So here is my challenge to Aaron. MAKE YOUR NEXT FEW POSTS WORTHY TO SOMEONE.

1. i.e. explain a question, rather than calling the person who asked it stupid. some of us are truly here to learn!!

2. explain something that has not been explained purely so us who know nothing can learn.

3. BE NICE.

I realize I may have started something I can't finish, but I am just trying to make this NG (rec.radio.cb) more knowledgeable for all, and I think you (Aaron have allot to be shared.

Trust me I will "pick" on others as time goes on. trying to learn all I can, but you can be assured the one that I think knows the least will be "picked" on last.

Here's my opinion on the D104 controversy, FWIW.

If you look at the ads they say that Astatic will stop producing THE
SILVER EAGLE and the last SILVER EAGLE will roll off production lines
in a few months so get your SILVER EAGLE while you still can because
THE SILVER EAGLE won't be manufactured again.

Astatic mentions nothing about discontinuing the other models of D104
that lack a cheesy-looking eagle stamped on the back of the mic head.

In working condition $200-$250. Exceptional condition with absolutely no
cosmetic blemishes $300.

Ok SMOKUMS take the antron 99 to get the best match they think you should
run 50 feet Wilson 1k runs 18feet so yes the length of the coax does matter
but you can run it anyway you feel.

I gotta agree with you, Aaron. Do you remember the gray base model
with the p.t.t. & the g.t.t.? It looked like a gray base silver eagle
with a standard D-104 head. I have the "special" (black base) with a
standard head swapped for the black head. It was the closest I could
come. The gray hammerlin (Spelling?) paint they used in the past was
far nicer than the dull stuff they currently apply. The old paint had
a real lustre to it. The name plates had a more quality look to them
rather than the current "cheesy" sticker. <Petty rant mode off.>

Now a Turner SSB+2...now we're talking! ;-)

Lucy fer what? Sheesh, you certainly are a well balanced individual. Got a chip on both shoulders. Why don't YOU let it go, instead of shooting from the lip every time someone else adds their two bob's worth. Just remember lady, if you put out tenders, you're bound to get quotes!

Sigh. You are, of course, completely correct. I like to compare my
"discussion" with Twisty with landing a large fighting fish. You let out
a little line, let him twist and fight, and wear himself out, and then
you reel it in. Then when it's all said and done you find out that the
fish is a 3 eyed mutation, you no longer have any interest in it.

The Power of the Almighty Chief Petty Officer:

As a crowded airliner is about to take-off, the peace is suddenly shattered by a five-year-old boy who picks that moment to throw a wild temper tantrum. No matter what his frustrated, embarrassed mother does to try to calm him down, the boy continues to scream furiously and kick the seats around him.

Suddenly, from the rear of the plane, an older man in the uniform of a
US Navy Chief begins to make his way up the aisle. Stopping the frustrated mother's upraised hand, the white haired, courtly, soft-spoken Chief leans down and, motioning toward his collar, whispers something into the boy's ear.

Instantly, the boy calms down, gently takes his mother's hand, and quietlyfastens his seat belt. All the other passengers burst into spontaneous applause.

As the Chief slowly makes his way back to his seat, one of the cabin attendants touches his sleeve. "Excuse me Chief", she asks quietly, "could I ask you what magic words you used on that little boy?"

The Chief smiled serenely and gently confides, "I showed him my anchors, service stripes, and battle ribbons, and then explained to him that they entitled me to throw one passenger out of the plane."

It illustrates my point that you cannot answer a question that you are uncomfortable with. You know that an honest answer may dimish your "group standing" . Do you align yourself with the "cool" dopers, or do you align yourself with the "normal" people? It's far better for you to not answer and leave everyone guessing. But like I said, your lack of candor shows your inner insecurity.

> Try to tell a nut that he's nuts and he'll swear you're crazy. You

If you were so comfortable with yourself, you wouldn't be so hesitant to answer a question of whether you use mind altering drugs.

> -Then you condone usenet rule breaking....oh, but by default of course.
>

> answering the questions....

What type of linear? When was I EVER asked that question? And to be honest, I am not the person to ask that question as I don't use them with any regularity, at least not on H.F.. On VHF, the T.E. systems units work very well for most moderate power applications. Units from R.F. Concepts are also of good quality.

> violating usenet protocol?

What are you saying here? Who is "pandering" to me?

As for "denigrating" others, there is this small thing called the first amendment, which gives people the right to express their opinion. If the "dog pound" as you refer to them(which, by the way, is somewhat "denigrating" on your part), want to express their opinion, that is their right, as long as they do not hamper other people from expressing theirs (non interference). Much like radio.
I don't think there are any USENET rules that prohibit anyone from expressing opinions. There are rules that address people that become disruptive. Those people should be taken out of the mix, just like their equivilent disruptive outlaw CBers.

> with not an ounce of truth.

The truth is out there. You have made many posts that basically flaunt your stance on illegal operation. Your opposition to those that are attempting to "clean up" the mess only add to that.

> But see, Dave, you already know this,
>
> Do I?
>
> -Of course you do, you are now a bonafide troll. Congratulations on your

Troll? I am hardly someone that posts the text equivilent of a molotov cocktail, into a newsgroup for the sole purpose of causing a disruption or flame war. If you cannot take the heat from a debate, then maybe you should not engage in them.

>

>
> -Yet you have demonstrated a favorable pandering to these types.
> Interesting.

How so? Are you implying that I (or no one else) am not allowed to agree with someone that disagrees with you? I may agree with the premise that the CB (and ham) bands need to be cleaned up from the blatent illegal activity. That does not mean that I agree with forged posts, letter bombs and "kiddie tactics" like saying "XYZ blows goats".

You nave no evidence (other than your own mind) that Aaron, Leland, Sparky or any other vocal opponent of blatent illegal activity, had anything to do with the USENET rule infractions and flood posts.

>
> That's all well and good, but that's ANOTHER topic, not this one.
>
> -Such as drugs, which you tried to steer the conversation to, among the

Drug use may expain your somewhat warped sense of reality and your strange debating tactics.

>
> This one concerns behavior on RADIO.
>
> -But your "human social acceptable standards" doesnt? Please. it applies
> to all facets of life, you just had a slight problem admitting it and
> seeing that it does indeed relate to usenet.

Yes it does, but that's not the topic we're discussing.

> Why should the actions of a relatively few selfish people be allowed to
> ruin the fun for the rest of the users?
>
> _That indeed can be applied to usenet. Your refusal to acknowledge it
> lends more credibility to the opposite of whatever it is your cause
> without reason is.

NO ONE can prevent someone else from using usenet. You have the choice
to read or not read a flamer's posts. That choice does not exist on the
radio, where one or two "linear jockies" can wipe out a 5 mile radius
area of people, who have no other choice but "turning it to the left".
That is why your continued insistance on comparing CB to USENET is
flawed. The two are like apples and oranges. The only similarities are
that they are both public forums.

>
> Telling someone to go "shit in his hat" is considered acceptable

>
> -As I reiterate, your tactic of pointing to another's behavior to
> justify your own is a failure and true to the troublemakers among us.

So, you assert that I am not allowed to bring forth examples of the type
of behavior that is so prevelant on the CB band, in order to illustrate
a point? Now who's the one dictating rules?

>
> Something that is most definitely "on topic"
>
> -No, it wasn't until now when you brought it up.. You appear to have
> several MO's and plenty to say, but demonstrate a slight problem with
> conveying exactly what you mean.

I think most people, who aren't on drugs, and have some sense of
objectivity, would have no trouble understanding and following my train
of thought. You, it seems, are the only one with a problem in that
regard.

>
> Deliberate overpowering other people's conversations without due
> consieration is also acceptable behavior?
>
> -You have done just that each time usenet behavior was presented for you
> to comment on.
> How can one "overpower" someone on USENET?
>
> -Flood.

You still have the choice to ignore those posts. Killfiles are wonderful
for those sorts of things. Flood postings still cannot prevent you from
posting something, so the comparison to being overpowered on the radio,
is just not valid.

> I'm sure you would as it steers you away from the main issue, and takes

>
> -You and the dog pound continually repeating it won't make it any more
> so. Lelnad has been trying for years and look at how he is looked upon
> now.

It depends on who you ask. I'm sure you're not looked upon with all that
much favorability either. Winning a popularity contest is not nearly as
important as the truth. And the truth is that you are a sociopath. You
reject traditional rules of proper behavior in favor of an anarchistic
view that you are free to break rules as you see fit.

> One of us definitely IS delusional. But there are 12 step programs to
> help recover from these maladies. Like I said before, try to tell a nut
> that he's nuts, and he'll swear you're crazy.
>
> -I dunno, I'm not qualified to tell someone that and neither are you,
> but you appear to enjoy engaging in such behavior.

If it walks like a duck, looks like a duck, and quacks like a duck,
chances are it's a duck. You've expressed most of the classic symptoms
of anti-social behavior. A google search of some of your "wilder" posts
will verify that. I can guarantee that a search of my posts will not
show a similar pattern.

> You seem to think that anyone who doesn't share your ...er "unique" view

> "forge" of N8 Doug, or Leland.
>
> -It usually is, but you are just another "fan" that is a Johnny

> come-lately.

Says you. Another example of your delusional paranoia, and inflated
self-worth.

> -Never claimed I did. What I do hold, is I have as much right to break
> the rules as you do to enforce them.
>
> Tell that to the judge.
>
> -The judge isn't crying me rivers concerning it, you are.

Sooner or later, your sociopathic behavior will land you in trouble with
the law. At that time you will have the opportunity to "tell it to the
judge". I'm sure he will be moved by your insistance that you have the
right to break laws as you see fit.

>
> especially when it disrupts other people that are attemping to follow
> the rules.

> But your actions speak volumes.
>
> -What "actions"? You know nothing of my actions other than what I allow,
> so you lie and accuse like the rest of the few dogs that I kick around
> on a regular basis. Get used to that to.

You don't kick around anyone. You're like the poster boy for illegal
radio ops. Anytime someone wants to see an example of the type of people
that make up illegal operators, and their twisted sociopathic mindset,
someone baits you with some topic, and sits back and watches you make a
ass out of yourself, thereby making their case without having to do
anything. We laugh at people like you. But it does provide a chilling
insight into what is becoming increasing wrong with society in general.

I do enjoy a civilized debate over points of logic. But you cannot seem
to follow that train, and get confused rather easily. As others have
reminded me, I think this has gone on long enough. I've had my fun
fighting the fish. Time to play catch and release...

Uh..... He was operating on the CB band. That, by definition, makes him
a "CBer".
The fact that he was ALSO a ham is irrelevant.

Doc, The bottom of my Antron is 50' I have need 65 feet to reach my radio
am I shit out of luck or will I have to move my radio to within 50' of my
antenna.

I have the same problem in my car I mount the Wilson antenna and now I have
15' extra feet of coax, what should I do.

Oh yeah, and don't forget about how the CIA makes money running those guerilla peanut farms in that un-charted isle in the middle of the pacific ocean. (yeah right) That's where the entrance to their secret lair buried miles beneath the earths crust. (saw it on the sightings TV program - it's true!) That's where their thought control transmitter is. (i got my protective helmet! NOT!) You can protect yourself from these "powerfull radiations" by spreading peanut butter onto a sheet of aluminum foil and then affixing it to your scalp peanut butter side down. (don't forget to take a picture and post it! We want proof!) Yes, peanut butter... What do you think the CIA needs with all of those trained gorillas farming the peanuts! (saw it - hard copy - Michael Jackson) They need to protect themselves from their own transmitter!

If you'll excuse me, I need to go catch the 11:30 interstellar pan-galactica flight to planet Zirkon, as long as I'm there I'll look up Dave or Debby to see if they're out to lunch.

Art Bell anyone???!

Yes, Ice, you have the right to use your fillfile and block my posts
or any posts you don't agree with. Unlike the poor 'non-competition'
folks on CB - who have no such choice. They must endure splatter from
your "stupid bowl" gang or be denied the use of their radios. What
about them? Are they are out of luck and have no rights?

>Definition of the SuperBowl
>If 10,000 CB'er's are on the SuperBowl

Now that you got the cable modem you can hop on Yahoo Messenger and take full advantage of voice conferencing... Webcam's, everything... Love it... I still have yet to come across a machine that won't run it. Even an old P133 non-MMX runs it just fine.

NAT firewalls aren't a problem either. Like the Linksys, Cable / DSL routers...

Tim why did Train have a hard time answering? He is not a ham if he talks on CB he is a Cber, if he choses to break the cb rules he is a law breaker, when he in on Amateur freqs he is a ham. Remember CB is the stepping stone to amateur radio, this has been confirmed by many in this ng so we can assume he is a cber at heart who went out and got a ticket didn't like the aspect of legal radio comms and went back to illegal hi-power cb.

Train, this is just like Toll Free, or Jay or any of the other Illegal
op's getting busted, he has a ham license but is a CB operator. Why do
you want to make it sound like he was not a CBer.
If you have to ask.............

I have no use for most ham operators and enjoy pointing out that these
are BAD HAMS getting busted and NOT CB people.

Uh..... He was operating on the CB band. That, by definition, makes him
a "CBer".
The fact that he was ALSO a ham is irrelevant.
Dave
"Sandbagger"
-
My, my Dave, you have many axes to grind. Here you present your anger
(yet again) over the wording used, but notice where you are directing
your tirades...to the messenger, and not even the correct one...your
dilemma is with Amateur Radio newsline, they are the ones that called
him a hammie. Why? 'Cause he is.
Your faux pas is a direct result of you bitching just to bitch...your
new collar fits well.

3126. Re: SWR

Newsgroup: rec.radio.cb
Date: 2002-03-05 15:25:56 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3C84E380.A6F44816@icok.net>
Source record: 117438

Smokin Cash,
First, SWR is not affected by power level. SWR is
a 'ratio' of forward power to reflected power. If the
forward power increases, the reflected power also goes
up, and the 'ratio' stays the same.
An SWR meter is not linear over a wide range of
power levels, that's why it has a 'calibration' knob on
it. Some SWR meters don't have a calibration feature
and that means one of two things, the meter only measures
over a fixed power range, or, it has an auto-calibration
circuit built into it (and is usually a more expensive
meter).
When measuring SWR you should do so at a constant
power level. The power level should also be fairly low so
that if the SWR is high you don't 'stress' the transmitter
by operating it into a high SWR.

As far as the conclusions you've made about SWR/coax/etc,
each is probably correct in some particular circumstances,
but not all circumstances. The 'trick' is knowing when/what
those circumstances are. That comes with understanding what
impedance is, and a few other things. That 'understanding'
only comes with lots of reading and thinking. Have fun...
'Doc

Twistedhed wrote:
-Everyone is on drugs, Dave, whether it's Lelnad for his high blood pressure or someone with their coffee or chocolate habit. Do try to stay on topic, once again old boy.

Note that you still avoided answering the very direct question, which, in it's own way, tells enough already.

-If that were true, you wouldn't be obsessing on it, now would you? <g>

It illustrates my point that you cannot answer a question that you are uncomfortable with.

-Your interprepretations always have been flawed, Dave.

You know that an honest answer may dimish your "group standing" .

-And if you paid attention, you would know I care not one iota what another thnks or feels of me. If I did, I certainly wouldn't be replying to you.

Do you align yourself with the "cool" dopers, or do you align yourself with the "normal" people? It's far better for you to not answer and leave everyone guessing.

-Really? I never minded how another thought, but thank you for sharing yet another character trait you share with my fan club. "If you don't answer me with a yes or no answer only, you're guilty" is a tattoo on 'Nads carpeted back. He waqnted it on the front but the giant "T" was in the way.

But like I said, your lack of candor shows your inner insecurity.

-Yea, that must be it, after all, I don't believe that one has been tried before...LMAO!

Try to tell a nut that he's nuts and he'll swear you're crazy. You really do need to look in the mirror a bit more often, especially with regard to what's considered "hypocricy".

-My level of comfortability with myself apparently bothers you, as does my belief in God. THAT, speaks plenty and tells us all we need to know.

If you were so comfortable with yourself, you wouldn't be so hesitant to answer a question of whether you use mind altering drugs.

-Au contraire..I am quite comfortable with all in my life. Your laughable attempts at prophecy only add to those indiscretions which I

manipulated you into committing.

-Then you condone usenet rule breaking....oh, but by default of course.

Another attempt at not answering a direct question.

-I have indeed answered I do not condone "inconsiderate" behavior. Your comprehension deficit is manifesting. You still havent mentioned what type linear you would recommend. It appears it is YOU that avoids answering the questions....

What type of linear? When was I EVER asked that question?

-I told you. You are unteachable and unreachable and frankly, I find it mildy entertaining, like Lelnad, N8 and
the rest of the troll brigades were......once.

And to be honest, I am not the person to ask that question

-If you comment on them, you open yourself to anything we choose to ask.

as I don't use them with any regularity, at least not on H.F.. On VHF, the T.E. systems units work very well for most moderate power applications. Units from R.F. Concepts are also of good quality.
So you are against rude and inconsiderate behavior on the CB?

-Tht's like asking if someone was against sunshine. What kind of question is that?

A very direct one. One that a "Yes" or "No" answer will suffice.

-(Chuckle) Go to google and type in this group and do a search on "a simple yes or no." LMAO! All from the trollup camp. WAIT! You been a secxret member all along, haven't you, Dave? Just took some correct button pushing for your true hypocrisy to shine.

I willl state unequivocally for you that I don't condone rude, boorish behavior, anywhere. Or splattering the spectrum, or interfering with others. etc.
Wow! Finally, an answer to my question.

_Now, let's see if you will return my kindness and be so considerate, or are just trolling.
Number 1: What type linear is it that you recommend?..and no. 2 : When your logic concerning behavior is applied to usenet, (After all, behavior is a SOCIALLY ((your words)) accepted standard) how is it you fail to see those that have pandered to you during this thread are doing a disservice by intentionally trying to denigrate others and continually violating usenet protocol?

What are you saying here? Who is "pandering" to me?

-The same person you are pandering to. Problems again?

As for "denigrating" others, there is this small thing called the first amendment, which gives people the right to express their opinion.

-Same as on the radio. No law against rude behavior.

If the "dog pound" as you refer to them(which, by the way, is somewhat "denigrating" on your part),

-If it walks like a duck.....

want to express their opinion, that is their right, as long as they do not hamper other people from expressing theirs (non interference). Much like radio.

-Another self-contradiction, but thanks for seeing it my way.

I don't think there are any USENET rules that prohibit anyone from expressing opinions.
There are rules that address people that become disruptive. Those people should be taken out of the mix, just like their equivilent disruptive outlaw CBers.

Then if you truly feel this way, then how can you support the position of many other people who flaunt their butchered up radios and high powered setups, which regularly interfere with other people, like a badge of honor?

-See, I never did that , Dave, and this tactic you have now lowered yourself to is the same one Lelnad uses, one of fraudulent accusations with not an ounce of truth.

The truth is out there. You have made many posts that basically flaunt your stance on illegal operation.

-Instead of flying your flags of confusion, why not ask me instead of accusing?
You just did a serious back pedal, to which we will address in a second, but first, please clarify your accusations concerning me condoning the support of butchered up radios and high powered setups like you claimed. My stance is indeed in contrast with yours, but not for the lies you and your newfound troll friends claim.

Your opposition to those that are attempting to "clean up" the mess only add to that.

-So, can the same be said about this forum, Dave? See, it's not up to you or anyone else to "clean" up another's area. If you blindly stick your hand under my door, don't be suprised when you pull back and wonder where your fingers went.

But see, Dave, you already know this,
Do I?

-Of course you do, you are now a bonafide troll. Congratulations on your new staus and acceptance by my other followers. Contact Lelnad for the newsletter.

Troll? I am hardly someone that posts the text equivilent of a molotov cocktail, into a newsgroup for the sole purpose of causing a disruption or flame war.

-Sure you are. Your exact postings are the definition of troll posts.... IE: Can't stay on topic, insults, turns topics to avoid answers, turns topics to one of a personal nature with the person they are debating.... You are guilty of all of the above, and in such a relatively short time span, as well. Quack!

If you cannot take the heat from a debate, then maybe you should not engage in them.

_If only you were not a hypocrite, you may hear what you are offering. You COULDN'T take the heat, "Dave", so you lowered yourself to the above actions.

  How could I, you never make a concise direct point. You babble and obfuscate with the skill of a politician. You remind me of Clinton trying to ascertain what the definition of "IF" is.

-You have way too much time on your hands, son.

Nonetheless, an accurate description of your "debate" tactics.

-A colorful personal description, no doubt, but the fact remains, you do not know the first enagement rule of debate and have aptly demonstrated such here. Note where your topic is now.,,,you have a problem with my methods....I guess I would too if I acted the fool and someone shed a castlight on me.

But judging by the way you fight tooth and nail and say usenet is no comparison, I wonder if you are capable of returning an answer....so, we can all draw an inference that you DO condone that type behavior on usenet, hmmm?
I avoided the USENET issue simply because it is not related to the problems of illegal radio operators and their seeming indifference for, and interference to, the other users of the band.
But since you finally (I think) answered my question, I'll endulge yours. I am against any activity that violates the intent of a set of rules or regulations. People who violate the spirit of USENET deserve the same contempt as those who interfere with the users on CB (or Ham).

-Yet you have demonstrated a favorable pandering to these types. Interesting.

How so?

-Look up "pander" and see if you can figure it out.

Are you implying

-I imply nothing, I come out and say it.

that I (or no one else) am not allowed to agree with someone that disagrees with you? I may agree with the premise that the CB (and ham)

bands need to be cleaned up from the blatent illegal activity.

-Big deal. So "may" I.

That does not mean that I agree with forged posts, letter bombs and "kiddie tactics" like saying "XYZ blows goats".

_now, that wasn't painful and it didn't hurt, huh?

You nave no evidence

-Duh. Of course, you must add the mandatory disclaimer.

(other than your own mind)

-Really? I don't post in the hammie rooms, yet there are several hammies in those forumsthat told Lelnad to stop forging and to dry up. So, you really ought to gain some knowledge of the situation before damaging yourself further.

that Aaron, Leland, Sparky or any other vocal opponent of blatent illegal activity, had anything to do with the USENET rule infractions and flood posts.

-Sure I do. You see anymore copyright violations? That's what I thought. Lelnad also implied a subtle threat and he was warned, not to mention the volume of places he USED to post from...oh yea....work (chuckle). Georgie was spanked from several access sites, but as you say, another subject.

That's all well and good, but that's ANOTHER topic, not this one.

-Correct, it is, but you really should apply it evenly if you are applying it at all. Note you conveniently left out the "rude" part when speaking of your new family

-Such as drugs, which you tried to steer the conversation to, among the myriad of other attempts you failed with.

Drug use may expain your somewhat warped sense of reality and your strange debating tactics.

-Only young whippersnappers like you are into drugs, or old burnouts. I don;t smoke, nor do I drink or partake in illegal substances.

This one concerns behavior on RADIO.

-Let me guess? Drugs are responsible? (Chuckle)Why not align yourself with doing something about drugs, since you mentioned them no less then 12 times in your posts, you obviously feel they are an issue. Oh that's right, you would actually have to face someone to do that. Spoken like a true kennel dweller.

-But your "human social acceptable standards" doesnt? Please. it applies to all facets of life, you just had a slight problem admitting it and seeing that it does indeed relate to usenet.

Yes it does, but that's not the topic we're discussing.

-Sure we are. You brought up "societal standards." That would apply to society and all it''s comprised of, not just what fits your argument at the time of convnience.

  Why should the actions of a relatively few selfish people be allowed to ruin the fun for the rest of the users?

_That indeed can be applied to usenet. Your refusal to acknowledge it lends more credibility to the opposite of whatever it is your cause without reason is.

NO ONE can prevent someone else from using usenet.

-Not true. Ask how many have been sent viruses or bugs on here. But you can jump right in and play lawyer for the kennel before they are even accused, justlike you did above. Guilty consciences indeed.

You have the choice to read or not read a flamer's posts.

-Not if someone sent you a virus, or flooded the ng taking up massive bandwidth.

That choice does not exist on the radio, where one or two "linear jockies" can wipe out a 5 mile radius area of people, who have no other choice but "turning it to the left".

-Sure it does. Change the freq or shut it off. No one is making you use it or listen to it.

That is why your continued insistance on comparing CB to USENET is flawed.

-No, that is why your attempts at saying there is no corelation is erroneous.

The two are like apples and oranges. The only similarities are that they are both public forums.
-Comprised of human emotions and opinions and subjugated to societies actions. And both are ruled by the same governing body. Much more in common than what you fail to recognize.

Telling someone to go "shit in his hat" is considered acceptable civilized behavior somewhere in the world?

-Whaaaa? You are off topic again, beginning to
use profanity, and appear to be posting in direct relation to your emotive responses.

I see that you can't recognize an example of the type of "upstanding" behavior that passes for CB traffic these days.

-As I reiterate, your tactic of pointing to another's behavior to justify your own is a failure and true to the troublemakers among us.
So, you assert that I am not allowed to bring forth examples of the type

of behavior that is so prevelant on the CB band, in order to illustrate a point? Now who's the one dictating rules?

-Not at all. I merely pointed out that chiding to another's trangression as a way of justifying your own juvenile behavior is neither productive nor conducive to anything remotely related to the topic and that you have used this tactic many times already, each a failure.

Something that is most definitely "on topic"

-No, it wasn't until now when you brought it up.. You appear to have several MO's and plenty to say, but demonstrate a slight problem with conveying exactly what you mean.

I think most people, who aren't on drugs, and have some sense of objectivity,

-This may explain one of your dilemmas.

would have no trouble understanding and following my train of thought. You, it seems, are the only one with a problem in that regard.

-I don't have a problem..you do with my "actions" that you know nothing of, remember? Or did you err when you claimed that, also?

Deliberate overpowering other people's conversations without due consieration is also acceptable behavior?

-You have done just that each time usenet behavior was presented for you to comment on.
How can one "overpower" someone on USENET?

-Flood.

You still have the choice to ignore those posts.

_As do you on the radio.

Killfiles are wonderful for those sorts of things.

-So is the "on" and 'off' switch.

Flood postings still cannot prevent you from posting something,

-Sure they can. One with not a whole lot of memory in the first place can be bogged down downloading all the wasted bandwidth. Get it together, man. Wanna try webtv? No problems there, dude.

so the comparison to being overpowered on the radio, is just not valid.

-Sure it is. Now that I have presented it to you, you can either choose to understand or play ostrich.

I'm sure you would as it steers you away from the main issue, and takes the heat (somewhat) off of you. But I'm not biting.

_Where did THAT come from?

-True to fashion, you suffer from delusions of grandeur as well.

Interesting choice of words, from someone who seems to live in a
different world, where being rude and inconsiderate are acceptable,

-You and the dog pound continually repeating it won't make it any more
so. Lelnad has been trying for years and look at how he is looked upon
now.

It depends on who you ask. I'm sure you're not looked upon with all that
much favorability either.

-The difference is, Lelnad, as are you, is overly concerned with what
everyone else thinks about him, and with other's own personal behaviors,
actions, and beliefs and what one does. I, on the other hand, care about
as much as another's opinion about as much as I am concerned with last
year's weather.
It affects your camp in a manner that it can never affect me.

Winning a popularity contest is not nearly as important as the truth.

-And your simple mention of such an idea proves me correct, yet again.

And the truth is that you are a sociopath.

-Ahhh, the anger, the uncontrollable rage, followed by the insult, the
calling of a name, clearly the last bastion stand before conceding you
have lost all.

You reject traditional rules of proper behavior

-Not at all. I reject what you say are traditional rules.

in favor of an anarchistic view that you are free to break rules as you
see fit.

-Ahh, the "a" word. Another that comes from only the trolllup camp.
.
One of us definitely IS delusional. But there are 12 step programs to
help recover from these maladies. Like I said before, try to tell a nut
that he's nuts, and he'll swear you're crazy.

-I dunno, I'm not qualified to tell someone that and neither are you,
but you appear to enjoy engaging in such behavior.

If it walks like a duck, looks like a duck, and quacks like a duck,
chances are it's a duck.

-I've claimed that.

You've expressed most of the classic symptoms of anti-social behavior.

_This isn't about me, but you struggling to make it so is classic comic
relief.

A google search of some of your "wilder" posts will verify that. I can guarantee that a search of my posts will not show a similar pattern.

-That is because you are too much of a coward to debate without insults and more than likely, one email name.

You seem to think that anyone who doesn't share your ...er "unique" view of the world, and is vocal in telling you about it, is yet another "forge" of N8 Doug, or Leland.

-It usually is, but you are just another "fan" that is a Johnny come-lately.

Says you. Another example of your delusional paranoia, and inflated self-worth.

-No, says you. You came running when the kennel camp called and positioned yourself inline with their favorite techniques. You have reduced yourself to their level, although I was beginning to look forward to doing it myself as I managed with N8, but you did it for me.

-Never claimed I did. What I do hold, is I have as much right to break the rules as you do to enforce them.

Tell that to the judge.

-The judge isn't crying me rivers concerning it, you are.

Sooner or later, your sociopathic behavior

_Ah, beacuse I disagree with you and express an opinion different than yours and point out your transgressions, you suddenly attempt to make the post about me, even going so far as pathetically begging for a google search. Failure is nothing new to you, is it?

will land you in trouble with the law. At that time you will have the opportunity to "tell it to the judge". I'm sure he will be moved by your insistance that you have the right to break laws as you see fit.

_I do nothing that will land me in front of a judge, despite your wild claims and lies and absurd accusations.

especially when it disrupts other people that are attemping to follow the rules.

-Again, this is more window dressing and innuendo from the trollup camp. I never claimed such.

But your actions speak volumes.

-What "actions"? You know nothing of my actions other than what I allow, so you lie and accuse like the rest of the few dogs that I kick around on a regular basis. Get used to that to.

You don't kick around anyone. You're like the poster boy for illegal radio ops.

-There you go again. Your ignorance is getting to be comic fodder for us. Again, you know nothing and attempt to play sage and seer.

Anytime someone wants to see an example of the type of people that make up illegal operators, and their twisted sociopathic mindset, someone baits you with some topic,

-Well, when someone wants an opinion, one would usually post. In the case you speak of, I guess that "someone" would be you. I already said you were a troll, now you admit to baiting. See, I was correct....again.

and sits back and watches you make a ass

-OOOO, you are really upset, aren't ya' "davey'?

out of yourself, thereby making their case without having to do anything. We laugh at people like you.

-Yes, you are now part of the "we" contingency of Lelnad and the lioness and N8. You wear it well. I am pleased to have escorted you to your seat.

But it does provide a chilling insight into what is becoming increasing wrong with society in general.
I do enjoy a civilized debate over points of logic. But you cannot seem to follow that train, and get confused rather easily. As others have reminded me, I think this has gone on long enough. I've had my fun fighting the fish. Time to play catch and release...
Dave
"Sandbagger"

-Why, certainly. Concedement accepted.

One good thing about a three-holer is that everyone knows why they are in that meeting.

It goes back to the days of open-wire feeders and link coupling to a MOPA. The line had an SWR that would gag a goat but the copper loss is so low no one cared. But at various points along a feedline at half-wave intervals you do encounter voltage and current nodes that are inconvenient as hell to couple to. In effect, you can tap down the feedline to get any impedence that winds your clock just as you can with a loading coil. Cecil Moore (CAM on rec.radio.amateur.policy) had a system where he could switch in feedline lengths to get a match to a 50 ohm transceiver using ferrite beads as a balun.

It probably is a decent if obscure idea to use coax length that is not a voltage node in case your antenna is damaged by a lo-flying UFO; your finals might survive even if you don't. A good shut-down circuit ends that problem.

I can remember some ARRL pub that gave a recipe for a paraffin mess to boil wooden spacers in to make your own feeders. Thems was the days.

Train, this is just like Toll Free, or Jay or any of the other Illegal
op's getting busted, he has a ham license but is a CB operator. Why do
you want to make it sound like he was not a CBer.
If you have to ask.............

I have no use for most ham operators and enjoy pointing out that these
are BAD HAMS getting busted and NOT CB people.

Uh..... He was operating on the CB band. That, by definition, makes him
a "CBer".
The fact that he was ALSO a ham is irrelevant.
Dave
"Sandbagger"

3135. Cable Internet: Health issue?

Newsgroup: rec.radio.cb
Date: 2002-03-05 19:47:48 UTC
From: virtualcpu@yahoo.com
Message-ID: <dddd510.0203051147.5578c49a@posting.google.com>
Source record: 117447
Cross-posted to: rec.radio.cb,misc.health.alternative,alt.health,sci.med,comp.dcom.modems.cable

Hello all,

I am planning to subscribe a cable Internet service for surfing to the Internet. However, I realized that my cable outlet is a bit far from my computer. After I measured, I probably need a 40 feet coaxial cable to connect to them. And in order to get connected on both, I have to put the cable along with the wall in order to reach the outlet. However, the cable almost surround my bed (three side of my bed). I am hestitated whether it will raise the health issue or not. If I placed the cable like what I decribed above, will it raise a health hazard issue? I am concerning this issue. Could anyone has any comments/opinions? Any comments/opinions are welcome!

Thanks in advance for your help!!

Sincerely,

Vince

Not to reopen old wounds, but ... a low SWR does mean you have a good match - between whatever is connected on both ends of the SWR meter. If your coax is lossy, the SWR will read lower than reality (assuming you check SWR between the coax and the radio). If you fed a mile of RG-58U and left it open at the antenna end, you'd likely see a 1 to 1 SWR at the radio - due to coax losses (the small signal at the far end would disappear after being reflected and travelling all the way back to the radio). You can use coax as a matching section between the radio and a load of, say, 25 ohms. You might achieve a 1:1 SWR, yet the actual SWR in the matching section would remain high. Interesting stuff. If it works, don't worry about it.

Coaxial cable, by definition, has a circular shield that surrounds the wire
that actually carries the signal. So it's well shielded and very non lossy.
Plus, the signal strength on cable is very small. Your basic AC electricity
is emitting tons more radiation than the cable ever will.

If using 6U or 11U cable, you can assume that you may lose 1.5dBmV in signal strength for every 150 foot of cable. not really an issue in your case.

I did answer the question. You just didn't like the way I answered it
asshole!
He is not a ham if he talks on
> CB he is a Cber,

Your words, not mine!

if he choses to break the cb rules he is a law breaker,

King George had the same thing to say about some guy named Washington other
than the radio thing.
> when he in on Amateur freqs he is a ham.
Remember CB is the stepping stone
> to amateur radio, this has been confirmed by many in this ng

Certainly NOT by me. I started in ham and went to CB. I went back and forth
a few times.

so we can
> assume

First of all asshole it is YOU doing the "assuming" not a collective "we".

he is a cber at heart who went out and got a ticket

Wrong! Try for door number 3.

didn't like the
> aspect of legal radio comms

No1 I have SPECIFICLY stated in the past it was more because of the assholes
on the bands than my distaste for "legal" operation.
Fuck you,
Train

and went back to illegal hi-power cb.

The signal is contained within the cable shield. There's no health hazard.

That loss is due to the dialectric, not leakage from the cable.

Wear aluminum foil pajamas and you'll be fine. ;-)

But seriously, cable is shielded. It leaks very little. Besides,
they'll probably have to install a new outlet with a new connection to
the main line coming into your house/apartment. Cable modems are very
sensitive to signal loss and often can't just be plugged into the
existing outlet you use for television.

3147. the pigs (OT)

Newsgroup: rec.radio.cb
Date: 2002-03-05 21:35:18 UTC
From: arcweb@bnnorth.net
Message-ID: <3c85397c.8596473@news.bright.net>
Source record: 117459

A farmer had five female pigs and as times were hard, he decided to take them to the county fair and sell them. While at the fair, he met another farmer who owned five male pigs. After talking a bit, they decided to mate the pigs and split everything 50/50.

As the farmers lived 60 miles from each other, they agreed to meet half-way and find a field in which to mate their pigs.

The first morning the farmer with the female pigs got up at 5 am, loaded the pigs into the family station wagon, and drove the 30 miles. While the pigs were mating he asked the other farmer, "How will I know; if they're pregnant?"

The other farmer replied, "Tomorrow morning, if they're in the grass grazing, then they're pregnant. If they're in the mud, then they're not."

The next morning they were rolling in the mud, so the farmer called the other farmer, hosed his pigs off; loaded them into the family station wagon and drove off to try again.

The following morning, it was mud again !! This continued for a week until one morning the farmer was so tired he couldn't get out of bed. He called out to his wife, "Honey, please look outside and tell me if the pigs are in the mud or in the field."

"Well, neither," yelled his wife. "They're all in the station wagon, and one of them is honking the horn.

This is a nice clean example of the Yaesu FT-101B.This
multi-mode(AM,SSB,LSB,CW)transceiver operates at an input of 260 watts
SSB,180 watts CW and 80 watts AM.The unit is fully transistorized with the
exception of the transmitter driver and linear amplifier circuits which use
3 readily available tubes.This "hybrid" rig delivers the audio quality and
punch you can only get with tubes.All receiver circuits are plug-in modules
to simplify repair and maintenance.Has a built in power supply and a fan to
cool the final amplifier.Works great.Comes with a hand mike (not original)
and the owners manual.

Definition of IceCold
If all CB'ers have the right to use a CB channel
Why does IceCold say only 10 should have exclusive use of it?
This is a great example of why IceCold is a selfish moron!

> If I placed the cable like what I decribed above, will it raise a
> health hazard issue?

Yes, there is a health hazard issue. With the cable surrounding only three sides of your bed, snakes can enter the unprotected side and possibly bite you. To remedy the situation, simply route the cable around your bed on the fourth side to complete the loop, sort of like what cowboys do in the desert with their lariats around their bedrolls. Following this tried and true tradition will keep your bed snake free....ignore this advice at your own peril, may God have mercy on your soul.

I have a nice D201 works fine. Has had preamp and
high/low power mod done. Inside and tubes looks good. I do have a
picture. I may have the paperwork on it will have to look around for it.
It is clean and not all scratched up . Lettering nice on the front.
would like 275.00 plus shipping.

The supposed professional who started all the concerns about the low-level electrical exposures being a health hazard, and all his research, has been totally discredited. No real study has found any link to any health issue from the typical electrical and magnetic fields found in a home. Only powerful field strengths, associated with transmitters, microwaves, and similar high power devices seem to cause problems.

The coaxial cable is the best shielded electrical cable in popular use. Emissions are extremely miniscule and you have nothing to worry about. The common CRT monitor is more of an emission problem with that powerful electron gun pointed right at your face.

Hi Chris,

I knew it sounds silly. The reason I would like to ask to confirm
because it (the cable) is right beside my bed. I wouldn't care if it
is a bit far from it. Since I don't know much about it, I would like
to ask your guys and confirm. Just be safe... :)

*****************************************
* HELP STOP HUMAN CLONING !!!
* * * * * * * * * * * * * * * * * *
```

3/5/02

Dear Friend,

I have just signed this petition to
ban human cloning, and is asking you to sign as well.

CLICK HERE TO STAND AGAINST HUMAN CLONING:

http://grassfire.net/93/petition.asp?PID=1813189

A biotechnology company has announced that it has
successfully produced the first human clone. A vote in the
Senate looms and we have just DAYS to win the battle to block
human cloning. That is why the Center for Reclaiming America
has launched this nationwide petition drive.

Our staff has already been in contact with leaders in the
Senate and we want to send 100,000 petitions to Congress in
the next two weeks. A vote is possible BEFORE EASTER!

This is a watershed issue for the human race! Please click
here for more information on the outrageous practice of human
cloning and to sign the petition. It takes just a few minutes
to take a stand against human cloning:

http://grassfire.net/93/petition.asp?PID=1813189

Then, once you sign, I need your help to rally tens of
thousands of concerned citizens to take a stand. Thank you
for your help!

Janet Folger
National Director
CENTER FOR RECLAIMING AMERICA

P.S. You can help us win this battle to ban the horrific
practice of human cloning. We need 25,000 people to stand against
human cloning in the next 5 days! Please help!

P.P.S. This summer, we rallied over 100,000 people to stand against stem cell research and our petitions had a major impact in Washington, D.C.! Now, we must stand against human cloning. Please sign and then rally your friends...

+ +

3175. Which Base antenna is better?

Newsgroup: rec.radio.cb
Date: 2002-03-06 03:58:18 UTC
From: lowrida24@aol.com
Message-ID: <20020305225818.19713.00001844@mb-fs.aol.com>
Source record: 117487

I am wanting to buy a base antenna. I have 3 options. I heard the old aluminum penetrators are the best ever made. I have heard the I-max 2000 is supposed to be good, but i had an antrona and wasnt impressed which is made by the same company. The last is Shakespeare ABS-1600. It is supposed to have a gain of 12.5 which is the highest I have seen. E-mail me your opions on which one i should take. Thanks!!!

Those are merely commercial standards for selling accessories and so forth. The numbers have nothing to do with the reality of antenna feedline issues. Length of coax DOES NOT matter.

Some undoubtedly are. Others are Hams who got their electronics training
from a study guide.

There are many CBers that know that coax length requirements are mostly
myth. Many of them even know when coax length does matter.

Had? Cecil still uses it on a daily basis. But he does not do that to
get a 50 ohm match - just a match that is "good enough". The primary
purpose is to change the nodes at the feedpoint of the antenna, to get
the feedpoint impedance into a useful range.

Both these are true IF the antenna is 50 ohms at resonance.

> If you have high SWR due to antenna mismatch. (i.e. 50 ohm trans. and 30 ohm
> antenna) coax length will make a difference only if you are using 75 ohm
> (T.V.) coax.

The transmitter impedance is immaterial. Only the coax impedance and the
antenna impedance matter.

> If your are trying to cophase then coax length make all the difference in
> the world no matter what ohm coax you use, because you must feed cophased
> antennas "in phase" for the to work under most circumstances.

It depends on the pattern you are attempting to obtain. Even then, the
coax length depends on the spacing between the antennas.

> If you have a 50 ohm trans. and a 50 ohm antenna coax length is not going to
> change SWR, only antenna length will help.

Again, the transmitter impedance is immaterial.

> while checking SWR on my radio I noticed

> 1. while the signal (carrier) is modulated SWR is higher (AM)

Why this would occur depends on the meter. If it is one that you switch
between forward and reflected power - it is going to happen every time,
unless you recalibrate for the modulated signal level.
level.

> So the question is

> How do you know where to check SWR, at carrier watt or at full mod watt?

Just check the carrier. Modulation can only make the measurement less
accurate.

Add a coupler and an additional length of coax. Or, better yet, buy new
coax.

> I have the same problem in my car I mount the Wilson antenna and now I have
> 15' extra feet of coax, what should I do.

Just coil up the excess coax. It won't hurt anything, contrary to common
belief. There will be a "slight" additional signal strength loss due to
the longer coax - but very slight. The coiling won't change the signal
strength at all.

The only health issue your routing raises is the possibility of tripping over
the cable. Why do you think the cable has the signal running through the
center of shielded cable?

That 12.5 db gain was referenced against a rubber duck, wrapped with a
wet string, and encased in lead.

For an omnidirectional antenna to achieve a true 12.5 db gain (Over an
accepted reference such as a dipole), would require a multi colinear
design which would make the antenna length unpractical. As a comparison,
a colinear antenna with 7 dbd gain at 220 Mhz, stands at about 10 feet,
while a quarter wavelength is about 1 foot. A quarterwave at CB
frequencies is about 9 feet, you do the math.

The best gain that you will probably find from an omnidirectional CB
antenna is about 3 to 4 dbd gain (or about 6dbi).

The penetrators worked well due to their proper RF coupling network, and
angle of radiation. They are most definitely head and shoulders above
the performance of the "radial-less" stick antennas like the A99. TVI
will be less also.

If you can find an older 70's vintage 5/8th's GP antenna, it's worth the
time and effort to "clean it up" and use it.

Dave
"Sandbagger"

If you realy think that if some lab want to clone a human, that a few silly laws in the USA will stop them, your dreaming. They just move outside the boarders and take their millions of $$$ to a county who will not mind at all and do it anyway. Face the facts, it's going to happen and you can't do a thing to stop it.

I own an Imax 2000 and I love it. It's worked fantastic with contacts all over the world.

I read an article on the net a while back, before deciding on the Imax 2000. The author compared the A-99 and the Imax 2000 by having them on opposite ends of his ranch house, at the same level. He fed them into one radio and used an antenna switch. He consistantly received better radio reports and received stations better on the Imax. Granted, this isn't the most scientific method of comparing antennas, but it gives you a rough idea. I also read a lot of opinions on the net.

The Imax is a 5/8 wave (at 24 feet tall) and the A-99 is only a 1/4 wave. The A-99 is much cheaper (about $39 at Copper Electronics), but the Imax is worth the $79 that it sells for at Copper. To get decent performance from the A-99, you need to buy the radial kit, which brings the cost close to that of the Imax.

What would be the difficulty in this?
-
When you consider that you have people like Tim, who use modified Ham
gear to freeband on 11m,
more and more Hams are paying attention to whom they sell equipment too
now days.
-
-Great. Most don't buy used junk and second hand-me-downs from people
like you anyway, unless it's an old styled linear that we fancy.
We go straight to the source, just like you.
My Ten-Tec came from straight from the dealer, a rather large dealer. No
call sign even mentioned.
-
I think it was mention here before that several Hams have observed
others refusing to sell H.F. gear to anybody that can't produce a valid
Ham ticket.
-
-Yea, it was also observed here that you offered to blow a VE for an
upgrade, so how much weight does it carry, simply based on "because it
was observed here?"
-
Many of the local Ham fests now have a policy that a ticket winner, if
not a licensed Ham, will not get the radio, just the cash equivalent.
-
-Great. About time you started hassling each other. After all, you cause
the most problems, even Riley admits this, and most cbers looking for
stuff aren't going to attend your parking lot circle jerk meets.
-
Sooner or later this type of behavior could filter down to even the
outlet channel for new equipment. No Ham license no sale of H.F.
transmitter.
--
Yep, and sooner or later your carotid could blow.

I am wanting to buy a base antenna. I have 3 options. I heard the old aluminum penetrators are the best ever made. I have heard the I-max 2000 is supposed to be good, but i had an antrona and wasnt impressed which is made by the same company. The last is Shakespeare ABS-1600. It is supposed to have a gain of 12.5 which is the highest I have seen. E-mail me your opions on which one i should take. Thanks!!!

Most Hams keep a copy of our license in our wallet at all times anyway. No more of a bother than a cop asking to see your driver's license. You do have one don't you Twisted, or did it get revoked for being mentally unstable?

>Yep, and sooner or later your carotid could blow.

Trying to use a new word again Twisted? Better go look it up the dictionary so you can learn to use it properly in a sentence.

> the subject was always > Beacon Experiment on 11 Meters !

The point always was if there is a 10m beacon, or data available from
previous 10m activity, that putting a 11m beacon in to operation could be a
waste of time and effort. Of course there is issue of the legality of
operating a 11m beacon too. It's a very small island, and the local
government may not be so forgiving about people operating transmitters on
unauthorized frequencies.

A
> simple half watt to 1 watt beacon could be made really easy and cheap.
This
> would make for a great experiment.

I would say you would observe just what you stated. Since the 10m band is much larger than the 11m band, the effect would be more pronounced by locating a beacon at both the top and bottom of the band. The would give a frequency separation of about 1.7 MHz.

well i use a shakespeare and i get gret results out of it and i have heared mnay good things about the imax so i dont think you'd be going wrong with either antenna they are both good base antennas (just my opinion)....yeh metal is probably the best way to go but if you dont want to spend more money for a good metal type then those two are the best way to go

Although the CP400 is trashed, I've bid on it with the hopes of using it
for a parts rig.

I used to service CPI Radios back when the Factory was still in business.
A great radio, but way over built. That and the expansion to 40 channels
followed by the flood of "dot.com CB Companies" started the death knell
for CPI.

cheers

Yeah. Nice try VoobBoob...

Posting some address of some HAM, then claiming they've "relocated", is not proof that that's someone's callsign.

Why don't you spend some time outlying the logic (or lack thereof) of your argument. That ought to keep you busy for the next two years or so, while you figure out that just because someone tattooed that callsign to the inside of your rectum, and just because you see it there on a daily basis, doesn't make it belong to someone else.

You really are a fool. Somehow you have deducted that tnom and Tim Nebo are the same. I usually just let a fool like yourself continue to put his foot in his mouth. And going by your last post you are doing very well at this.

But in this case I am going to help you look like an even bigger fool Bigger than even you can accomplish by yourself.

****
A quote from you:

"You sissy keyclowns always moanin about hiding behind aliases, etc. Heheheh."

Aliases.....Yes, I tnom have always used an alias. This has always been the case. I have always been up front about this. Using an alias is no different than using an unlisted number. It only becomes sinister with actions, not use.

Your attempt to tieTim Nebo to Mucks.net has no connection to me. REMEMBER you yourself admitted that I use an alias. So how can you assume that tnom@mucks.net is some guy called tnom from mucks net? How can you even assume that tnom is from mucks.net?

Better go back to the drawing board. You've gotten an F for failure to prove anything.

snip
>>
>> The above is all useless garbage. You insinuate that tnom and Tim Nebo

You *know* it's his callsign. And those who know him *know* its his callsign. What I can't figure out is why a ham like you would run to defend a guy like Toll/Shane (a guy who proudly boasts of bootlegging and running extremely high power on ham and CB for the fun of it).

But if you want to play silly games and pretend that his call is not KD6VXI, then I would suggest you email him and ask him yourself. Will he deny it? Perhaps. Then again, Toll/Shane cultivates a 'tough guy image'. Hiding his ham callsign could make him look scared. So he may just come out and admit to it being true.

Doc, The bottom of my Antron is 50' I have need 65 feet to reach my
radio am I shit out of luck or will I have to move my radio to within
50' of my antenna.

-
-Then you and he have plenty in common, eh?
Are you one of those hammies who happens to use an antron on ten meters?
Oh, yea, you can't talk on ten with your license. Never mind.

Sorry douchebag, this was a hypoythetical question for Doc, I wouldnt use an
Antron if you gave it to me. Oh btw, my license allows me to talk "LEGALLY"
on every Amatuer radio freq, ask Landshark for the call sign then go to
www.qrz.com. Remember Twistednutz just because you say it doesn't make it so

That is correct. It is good to see that so many others recognize
this, too. This wasn't always the case on this newsgroup.

> Short antennas have a very small bandwidth and your SWR will increase

A 1:1 SWR does indeed imply resonance; it requires it.
Resonance, however, does not imply a 1:1 SWR. You could achieve
resonance without achieving a 1:1 SWR.

Resonance is the point at which the imaginary part of the complex
impedance goes to zero. A 1:1 SWR requires the complex component
of the impedance to be zero (i.e. 50 + j0 ohms).

Longer is definitely better. Pick the longest antenna that you can
deal with.

It is impossible to predict the SWR of an antenna with such accuracy.
There are too many variables. Just install it and tune it for
minimum SWR.

Actually, I don't *KNOW* anything of the sort.

I do know that just because someone says it's so doesn't make it so. I also know that Toll Free has been a fount of information and help to me building my first HF tube amp. Whatever his callsign is/isn't (and I don't believe he has one), whether he's a CBer or a HAM, he has helped more on this newsgroup and in email than most here... especially you, VoobBoob.

I have yet to see ONE constructive post come from your keyboard. Actually, I have yet to see any proof that Aaron H Voobner even exists.. Noone by that name has a HAM license, noone by that name has filed a federal tax return in the US in the last 10 years...

So you're concerned about true identities? Post yours.

A 1:1 SWR does NOT imply resonance, it implies a purely resistive
(non-reactive) load, resonant or not. A 50ohm dummy load isn't
resonant but will show a 1:1 SWR. Haven't we done this before?

What makes the coax length critical for cophased antennas is
that the coax harness typically employs quarter wave matching
transformers. That is, a quarter-wavelength of 70 ohm coax is
used to transform the 50 ohm antennas to a 100 ohm impedance.
Then, the two 100 ohm impedances are connected in parallel to
let the radio see 50 ohms.

The primary goal of keeping the coax length fixed for such a
cophased antenna harness is to achieve a good match. Changing
the length of these coax sections would wreak havoc on your
input impedance.

ERP is what you are after: it isn't affected by coax length, and it
isn't measured with an SWR meter. Find or build yourself a
field-strength meter. Here's an easy one to build:

www.cet.com/~sparky/cb13.htm

Why do you want to change the subject? Go back and read this thread. I
am not the one "concerned with true identities".

I responded to Train's post that claimed 'bad hams' were being busted
for running high power CB rigs. I pointed out that both Jay and Toll
Free were hams, and that both admitted to running high power on CB.

That was when you stepped in.

You claimed that Toll Free was not a ham. I responded to you with info
(his call) that I found by doing a simple archive search of this
newsgroup. You responded by questioning the veracity of that info. I
responded by suggesting we settle the matter and contact Toll Free.
Now you want to change the subject all of a sudden to "Aaron Voobner"?
LOL. Give up, you've lost the argument.

-Aaron-

I believe it too. I bet this is a true account.

See you in Toledo,Chuckie.

N8 is going to ask you if you want to apolgize personally to
his family for threateneing them with violence. Since his wife and
both kids will be there,i think it might be a good idea, since we KNOW
you are to sissified to do ANYTHING but hide behind a keyboard and
threaten people.

MY BIO!!!!!

Cocksucker Peckerhead. Asswipe - K8CPA

Okay, this is the place where I tell you how I came to know how
fucked up I am.... and all the personal information about me. I will
try and answer all the questions:

Date of Birth: June 28, 1972

Place of Birth: Detroit, Michigan

Religious Information: Well, first off, I am NOT heterosexual! I am
a faggot! I accepted penises as my personal Lord in 1980. I was all of
10 Years old, I knew exactly what I was doing, I knew that if I didn't
get cock in my mouth, I would not See the Lord in the rapture of it's
jizz pulsing. I have been butt pumped nightly for 12 Years. Although,
I was "Backslidden" for about 6 of those years, while screwing female
barnyard animals. I am now back serving my Lord penis. I would like to
Thank the Rev. Jack Hizhogoff of Detroit Gayboy Outreach (Web at:
http://www.dgo.fag) for standing in the gap and slapping his manly
dick up my fat faggot ass, and for a playroom where people like me,
who were burned by chickenhawks with syphylitic dicks and fellow fags
in general, could come and give their hearts back to the Lord penis.
My only regret is that Rev Hizhogoff had to start pushing his manly
dick in my fat faggot ass to the point where I could not bear to bend
over anymore, and!
I returned to my favorite pastime, cocksucking in the men's room of
the Detroit bus station.

"Burned" by the syphylitic cocks in my mouth and asshole?: Yep,
Sure was.... I was... like I said before, I was sucking when I was 10,
(around 1980), I was originally sucking just anyone, especially born
again Christians and other mentally fucked up Baptist types like me. I
loved those guys when they'd tell me to tongue their assholes. Condoms
were a BIG no-no.... and I believed it!

Speed ahead 4 years. in 1984, The Baptist Church I went to had a
bit of a controversy, The Pastor had resigned because he was caught
bobbing on my young fat faggot pee pee, and things there were in a
state of chaos, and my mom did not want to suffer having to put up
with my faggot punk boy ass at home. She enrolled me into the Detroit
Institute for Hopless Gayboy Fatass Chumps. I started attending and
believe me, going to a Full-TILT anal only gayboy school. after

attending one with a stated preference for teaching Hopless Gayboy Fatass Chumps to mainly suck dick, was a MAJOR SHOCK to my system! But one thing kept me from leaving the place, was the fact that these people seemed to really love the Lord Penis. and there was this one guy, named Robert Snyder, Who played the drums, like John Bonham, (from Led Zeppelin) and we got along great.... (Not to mention he would let me drink his jizz on the sly. That was HOT! least *I* thought so! Hey! I was 14 years old, and my hormo!
nes were at full TILT! So SUE ME!) (By the way, Snyder is now married to MoparHolic and living in Ohio. I'm very happy for him.

Anyhow... After being there for about a year. I started being interestin in playing drums for them, as I was a drummer, from a young age... and I wanted to use my talent for the Lord Penis. Well, I eventually got the nerve to ask if I could play for them, and they said sure, as long as I would give ‘em all head before each show! AWESOME!!!... My first time playing for Detroit Institute for Hopeless Gayboy Fatass Chumps was a nightmare! I was scared, I totally forgot how to play because I was violently burbing up the sprem I had sucked down before the show.! I was THAT scared! Anyhow... speed ahead to age 19... I was changing as a person, things were changing at Detroit Institute for Hopeless Gayboy Fatass Chumps, as well. and a bit of a disagreement rose up between me and Snyder. I wanted to suck their cocks the night before the show instead of immediately prior to it. They said they needed the rush in order to play better, and I was asked to step down from the music mi!
nistry. Needless to say I was crushed. and very upset at Snyder In fact. I didn't think I'd ever be able to forgive him for that... Anyhow... I entered into what I called "My Dark Years" from age 19-26... Drugs, Drinking, eating 7 meals a day of Burger king, Dominos Pizza and Taco Bell in order to make myself an even bigger Hopeless Gayboy Fatass Chump.... and when I found out that Snyder had turned heterosexual, I really went off the deep end... until...

MY MOMENT OF CLARITY

Well, when I was around 26, I was totally burned out on the Dominos Pizza"... I was just sick and tired of being sick and tired... I needed cocks rammed up my Hopeless Gayboy Fatass Chump poop chute and I needed it BADLY!!! the people I was upset at were gone from Detroit Institute for Hopeless Gayboy Fatass Chumps. I was not getting any older... and I was ready to stop running from the Lord penis. But I had issues to resolve in my life... How could just Go back to the fags that had only "screwed" me and wouldn’t let me suck cocks in the first place? I still felt like I'd been wronged! But I had the Clarity moment of a lifetime... This thought crossed my mind...

"I was a FAGASS PUNKBOY MOTHERFUCKER BEFORE I came to the Detroit Institute for Hopeless Gayboy Fatass Chumps

Why am I allowing something that happened 7 years ago, keep me from serving my God, the Penis?????????

My Return to total Fagassedness!

Well, I was 26 years old... I was wanting to come back full time to Lord Penis. But I wasn't going back to Detroit Institute for Hopeless Gayboy Fatass Chumps (at least not at that time!!!) I had heard about a church called DGW (short for Detroit Gayboy Outreach) and I'd heard in the past that it was a nice place... So..... I wanted to be where the Holy Spirit of the Lord Penis was... and there I was... I came to the church on Ann Arbor Trail... my first experience there was a interesting one, I came in the parking lot... puffing on a 7 year old kids cock, (in my years of being Backslidden, I picked up a nasty 2 child a day, sucking habit...) I finished my child, and went in, and right away I heard SCREAMING in my ear... "what are you doing here???" "these are the people that Screwed you, but would not let you suck dicks!" act..... and when the song service started, the Holy Spirit of Lord Penis fell, and I became very uncomfortable, to the point when I had to lea!
ve! and I did!, I remember a usher, running after me and saying where are you going??? I remember looking back at him and saying... "I can't handle this SHIT I got to get out of here!" and I left.... Well, that week... I sort of prepared myself for service to mensa dicks next week, I took my Book, Gay Sex For Dummies to work. (I worked midnights as a Security Guard, so I could walk around the ghetto apartment complex I patrolled and peek in windows at sleeping little boys. and I had lots of time to masturbate...) My mother realized I was fantasizing about kids nuts.... I found myself reading the Word, and Praying for a big hairy chested man to suck off.. by Sunday, I knew I was ready to come back... Went back that Sunday.... they had a Illustrated Sermon on fellatio with pictures from several fag magazines, it was great, and needless to say, my Hard cock, Melted in the presence of the Lord Penis. and I knew that I wanted to come home.

I thank the Lord Penis for his Love, That takes us whacked out people as we are, and makes us his Servants....

Where am I now... : Currently Attending Adult classes at The Detroit Institute for Hopeless Gayboy Fatass Chumps.

HAM RADIO?!?!?!?!?!?!?I BETRAY IT AND WORSHIP ILLEGAL FAGGOT KEYCLOWNS BECAUSE THEY LIKE SUCKING COCK AS MUCH AS I DO!!!!

I was, I guess you could say, Born into the CB FAGGOT Hobby... My Father, was a Dyed in the wool CB FAG... I even had a stint in the CB radio hobby as well... Anyhow, one year (I think I was around 8 Years old...) my parents and I went to have sex with my Grandfather's Sister and her German Shepherd, in Conway, Ark, which is the world capital of CB FAGGOTS. To say the least, was totally impressed with the FAGGOT CB Hobby, because it satisfied my craving to run my faggot mouth constantly AND to suck cocks!!!. and for years I did nothing about it, just sucking dicks constantly and that linear tuning on those tube type ILLEGAL FAGGOT KEYCLOWN amplifiers was just too hard to learn. Speed Ahead to age 14, a friend of mine, Joseph Hampton (Ham call sign N8ExtremeCockNosher-but ALSO a secret ILLEGAL FAGGOT KEYCLOWN) who

lived across the street from me, and also was interested in getting his dick polished as well.. Well, we had some gay sex together... (you see this was when you!
had to be secretive about your gayness! I was KB8HHZ (hugely horny for zebra!) and Joe was KB8HGL (Hungry Gonad licker!)... I believe me and Joe were originally licensed in 1989....

On April of 2000. The FCC Restructured it's licenses... and I paid a renegade VE 50 bucks and Received my General Class Ticket... I often masturbate while thinking of linears for ILLEGAL FAGGOT KEYCLOWNS. And really think Riley is mean. Maybe if I sucked his dick he would not be after traitor scumbag shithunk fagboys like me.

My Call? Is a Vanity call that I paid for, it is my initials!
Because as a Hopeless Gayboy Fatass Chump, I need something like that for my ego.

so there you go!

I hope this answers everything you wanted to know about me!

I love sucking cock! Let me know when you are in the Detroit area!

Freebanders = unlicensed, anonymous, bootlegging on unauthorized
frequencies, illegal modded rigs.

10 meter intruders = unlicensed, anonymous, bootlegging on
unauthorized frequencies, illegal modded rigs.

Looks the same to me.

Doh!!! Knew I forgot something. Sorry folks... I was all excited about making the 2600 manual available...

They're owners manuals... No schematics... The Schemes are too tiny to scan in and get anything legible. Even at 600dpi they still fall apart. I'm going to have to enlarge them using a photographic process instead of a digital. BUT!!! Once that happens I can easily turn them into Vector drawings so they'll be relatively small and very high detail.

Whoa hold on there Bobalouie, you are right about the just because they say it doesn't make it true. This surely holds up in your case as well. If you speak to Toll Free on a regular basis you will know he moved to San Diego in December, you should also know his first name, since you said Toll Free does not have a Call sign and you still don't believe he has one Ask him if you guys are so Tight you should know he has one and what it is. The question remains since you are now side stepping it " If that is Toll frees call sign and former address will you make a public apology to Aaron for doubting what he said as the truth ? "
did Aaron provide false info or true info. While your at it provide a list of constructive post that you have contributed to this NG, and I'll provide 0 from Twistedhed to counter it. Ok Deal or what. You opened your mouth with false info and blame aaron for posting false info now it is time to back up what you so or admit you are wrong Can you do it.

Prof.

Good move switching the bias through the relay contacts like Texas Star does.

Do you really need R4 and R6? Looks like R2 and R3 already do that bias voltage divider job for you.

If you want your keying ckt to work with every radio, (including ones that have capacitively coupled outputs), you need an inductor to ground at the RF IN port so the anode of your D3 diode has a relatively low resistance ground path while maintaining a relatively high AC impedance.

C7 would only be necessary if you wanted to use the amp in a positive ground vehicle. But if that was your plan, then you need to isolate the circuit ground and float it, using bypass caps to connect the circuit ground top frame ground.

Your design HAS been improving, but still needs a little more work.

Good luck,

Dennis O.

True.

Now some trivia questions:

1) Does anyone remember what those amps were called before they were called Texas Star?

2) Does anyone know the state where they were originally manufactured?

> Another one was the amp
> used for the TenTec Argonaut which died with the amp regs. TenTec built

SURE!

Did you believe it?

> everyone else has given them up in favor of things like 4CX1600s -- draw
> grid current and die.
>
> Any background???

People who shift bands a lot should purchase broadband rigs.

Broadband rigs are NOT tube rigs.

Tubes give you more watts per dollar invested and do it much more cleanly than any solid state broadband amp, but you need to know how to tune them properly.

Answers to above questions:

1) First they were called Outcom, and then White Line.

2) Indiana, about 20 miles from where I live.

A few more CB history trivia questions:

Listed below are a few (8) names of the original manufacturers of the 'made only for CB', (11 meter - 3 watt drive), amplifiers.

Can you guess how many of those businesses were started and run by licensed ham operators?

Apollo
Black Cat
Contex
D&A
Echo
Firebird
Galaxy
Hygain

I just picked the first 8 letters of the alphabet, and only one amplifier manufacturer per letter...

There are many, many, more names that could be added to the list but I don't have a lot of time right now so those will have to suffice for my example.

If you guessed that EVERY ONE of them was started and run by a licensed ham operator, you would be correct!

Regards,

Dennis O.

And I'd like to add that a 1/4 wave whip on a car has an impedance
of about 36 ohms. That will cause an SWR of about 1.56:1. Trying to
tune that .56 out will result in a less efficient antenna. Ask BDW.

Thanks for the education!

I was familiar with the circuit but did not know the official name for it.

I have seen that circuit used in many of the last Tube Base Radios that had output transformers but no modulation transformer or winding on the output transformer. The Layfayette and the Robyn come to mind....

But I have also seen REALLY OLD Eico, Heath, and Gonset CB sets that ONLY modulated the screen grid of the output tube. What is that method called?

This is great news to me, Dennis, because as we know, the FCC will enthusiastically bust hams for violating FCC rules and operating illegal CB amp businesses. No matter if they just happen to have a Tech Class license and not use it. They will get popped.

I only have one problem I have with you blanket claim (above) that all CB amp businesses are run by hams. There's no substantiation.

Unless you can put call letters to those company names, all you are doing is venting a lot of hot air.

-Aaron-

Mopar, you are confused. Read my post again.

I did NOT say anyone who won't give their own call letters is full of
hot air.

I said anyone who posts a claim that "all cb amp companies are stared
and run by hams" should back it up with proof. Call letters of those
hams would do nicely as proof.

Otherwise Dennis is just contributing another false CB myth, like
"magic coax length", that some poor schmuck will repeat to some other
poor schmuck.

Way to go, Dennis.

Wow, kind of like background checks for firearms! Neat idea Leland. One
thing your tiny brain overlooks....businesses are in business to make money,
and as long as it is legal, they have no reservations about selling HF gear
to the unlicensed. Get a grip man, the dollar talks!

Actually, VoobBoob, I didn't think you could follow the logical progression here, so I'll spell it out for you...

1. you claimed Toll is a HAM.
2. I stated that he's never claimed to be a HAM.
3. You posted his "true identity according to Aaron H. Voobner, FakeName Extroidinaire."

By this, we can surmise that you are concerned with true identities. Which reminded me that your true identity is still in question...

Now why would you, someone who claims to be real, and bases said clams on a website alone, want to go around spouting out "real identities"? How could we even begin to THINK about trusting anything you'd ever say?

Changing the subject? Not really. Your imagined world must be fun to live in, if you're you.

So they are then unclaimed and unsubstaniated names with no basis for
proof.
"Just because you say it don't make it so" Truer words were never spoken.

Who help or started X-force amps Dennis, any ideas?

And this surprises you, Dennis? Virtually anyone who can find his butt at high noon in a phone booth with respect to electronics ultimately gets a ham ticket. And it is just that, a license.

To hear wannabes like Aaronia talk, you would think we took Holy Orders.

So far as I know, screen-grid modulation is called 'screen-grid modulation'. Works pretty good too as beam tetrodes or even unbeamed ones tend to be pretty linear with respect to screen voltage. Some tubes are better than others, as I recall a 5763 did it pretty well because it is a well-screened tube. For VFO circuits and keyed crystal oscillators this is also important so much so that after reading thru the Handbook I began to suspect the League owned the patent on the 5763. Some CBs used 5763s as finals.

The old Globe Scout used screen modulation and added controlled carrier to try to keep the heat down to something merely ridiculous; screen mod is not anywhere near as efficient as plate mod. But you can modulate in the cathode or control-grid circuit as well. Your 58 edition probably has a cathode modulator.

The problem is a bit different when you have standards based on output.

It might be better to state that a dummy load is resonant over a broad range of frequencies.

Of course, it is just about useless as a radiator. But radiation efficiency should probably be the topic of a different thread.

Quick spelling lesson....."condems"....should be spelled "condoms".

FWIW, I am monogamous and I've had a vasectomy. Now, if you and your gay buddies need them to prevent the spread of AIDS, feel free to use them. I've got no need for them.

>waste of time and effort.

Pride perhaps? 10-meters is NOT 11-meters.

>Of course there is issue of the legality of
>operating a 11m beacon too.

Of course. In the US, it must be a Part 15 device at 100mW or less.

>It's a very small island, and the local
>government may not be so forgiving about people operating transmitters on
>unauthorized frequencies.

I have a wee bit of practical experience in this particular area. Particularly in the Carribean and South America. "Unauthorized frequencies" covers quite a bit of ground. Wrt 11-meters, I have personally found both the governments AND the local AR community to be a little less condescending and allot more tolerant of their "11-meter" counterparts. After all, there are more than a few who play for both teams. Not supposition, just sharing some "real-life" experience.

I think it's great that there are a few 11-meter beacons, both here AND abroad. Even better is the fact that the fellow here appears to have taken the appropriate measures to operate his beacon within the FCC rules. Sorta like some guy who sends Morse on 11-meters...nutso! :-)

Go ahead.

>1. you claimed Toll is a HAM.

I did.

>2. I stated that he's never claimed to be a HAM.

Here's what you stated:

>>Who said Toll Free has a license? I think that's
>>probably just more ASSumption on your part, VoobBoob.
>>
>>-SSB

You need to review your own posts a little closer, SSB.

>3. You posted his "true identity

I posted his ham call in response to your question. (Here it is so you
can see it again)

>>Who said Toll Free has a license?

So as you can see, I was answering your question to the best of my
ability.

>according to Aaron H. Voobner, FakeName Extroidinaire."

Instead of trying to shift focus to "Voobner", you need to try to stay
on the topic. Otherwise it looks like you are losing the argument and
desperate to hide that fact. The topic we're discussing is Toll Free.
Do a little research. Toll admits he is a ham many times in the NG.
Here's only a couple of examples......

From: Toll Free (tollfree@bigradios.com)

Newsgroups: rec.radio.cb
Date: 2001-10-20 20:55:19 PST

>You are a ham. You should
> know better.

Yes I am.

I also enjoy high power CB operations.

From: Toll Free (tollfree@bigradios.com)
Subject: Re: ARRL proposal
Newsgroups: rec.radio.cb
Date: 1998/09/01

Thank you Dennis.

I have my ham license, but there is only two ways that I will ever upgrade
it...

1. Pay for a license (illegal)
2. Have the code dropped.
---

*(Note that Toll wishes he could cheat by paying for a license upgrade. Pretty pathetic, huh? Not a very good role model I'm afraid)

A few posts back I honestly thought you knew Toll was a ham and you were merely pulling my leg and acting stupid. I was wrong. I realize now that you really ARE that stupid.

Two little kids are in the hospital, lying on beds next to each other, outside the operating room. The first kid leans over and asks, "What are you in for?"

The second kid says, "I'm in here to get my tonsils out and I'm a little nervous."

The first kid says, "You've got nothing to worry about. I had that done when I was four. They put you to sleep, and when you wake up they give you lots of Jell-O and ice cream. It's a breeze."

The second kid then says, "What are you here for?"

The first kid says, "A circumcision." And the second kid says, "Whoa, I had that done when I was born. Couldn't walk for a year."

There are several more posts where he claims the same call letters.

>3. You posted his "true identity according to Aaron H. Voobner, FakeName
>Extroidinaire."

He posted Toll's identity according to Toll's own admissions. BTW,
where has he gone? The newsgroup is getting kind of boring without his
technical hocus-pocus.

"resonance - 1. A circuit condition whereby the inductive- and
capacitive-reactance (or -impedance) components of a circuit have been
balanced. In usual circuits, resonance can be obtained for only a
comparatively narrow frequency band or range."

Since a dummy load has no reactances to be "balanced", it might be
better to say, as I said before, that it is a purly resistive load.

>Of course, it is just about useless as a radiator. But radiation
>efficiency should probably be the topic of a different thread.

In the light of the title of this thread, it might also be better to
state that SWR is not 'tuned'.

VO's are Newfies. Goes back before 1949 when Newfoundland joined Canada.
But VO&#65533;BNR would be a legal call until the locals buried him in fish guts.

OK. Let me try a different tack.

Dennis,

Since you obviously seem to have a chip on your shoulder about hams,
why not make public the call letters of the people you claim (above)
are illegal CB amp maufacturers? That way you will be further proving
your point of how hypocritical hams really are. They might even be
prosecuted at some point.

Whattya say?

I have a few items. A nice set of yaesu twins.......FL-101 160M-10M
Transmitter , FR-101 Digital Receiver 160M-2M , matching speaker has
all interconnect cables. Also D-104 mic. 350.00

I have the YC-601 Digital Display (Yaesu) It is in pristene shape
really nice have connection cable and BOOK 225.00

Tram D201 nice shape good tubes, wood and face nice.Not all beat up. Has
All Chrome D-104 mic with it. 250.00

Realistic PRO-39 Programmable Scanner lets you in on all the action!
It gives direct access to over 31,000 frequencies, including those used
by
the police department, fire department, ambulance services, amateur
radio
operators, and transportation services. Frequencies can be stored in
200
channels which allow selections at any time Scanner is in good shape.
Has a great receiver on it. Picks up really good.
100.00 .tandy pro 39 manual on line
http://support.tandy.com/support_electronics/8992.htm

HTX-202 2 meter handheld work great looks fine. Have extra battery pack.

70.00 check out the online manual listed below
http://support.tandy.com/support_electronics/15563.htm

all item + shipping from 28681.
this equipment is in working order and looks fine. selling as is. will
not be doa on arrivial.

According to Toll, he got bored. N8 and VoobBoob proved to be less of a challenge to him than he originally anticipated, so he's gone on to greener pastures.

Thanks to him, my first 750W one tube design is almost complete. I'm looking forward to putting it on the air sometime before September. Look for me on 40M with it.

Why? About 30 years ago - a bunch of us used to practice CW on 11 meters.
We use 16-L for the frequency.

Where does it say that the circuit has to have reactances to be
balanced?

On the other hand, an antenna or dummy load is generally not considered
to be a "circuit". It is a load at the output of the circuit.

>Where does it say that the circuit has to have reactances to be
>balanced?

How are you going to balance the reactances if you don't have
reactances to balance? The whole point of 'resonance' is to indicate
some sort of frequency responsiveness, which is probably why the
definition included the phrase "a comparatively narrow frequency band
or range".

>On the other hand, an antenna or dummy load is generally not considered
>to be a "circuit". It is a load at the output of the circuit.

Simple logic would dictate that a circuit be resonant if it has a
resonant component; and if it has no resonant component then the
circuit isn't resonant.

I personally agree with Rock but that's my opinion. As far as spamming goes after looking I see he doesn't post that much and keeping in mind that this is a public forum that many isp's connect to and use. Also spamming can be posting things for sell, so there for there are many spammers in here. After being on the internet for many years now and around groups such as this. I have seen people post porn links and the related in groups just like this and nobody says a thing. I say if your going to hang rock then lets stop the sales also, as well as the posting of personal web pages. That would be the right thing to do because it falls under the same category as stated below.

What is Spam?
Spam is unsolicited e-mail (or news postings) pushing a point. Be it an ad for a used PC, or an urge to vote on a proposition; if you didn't ask for it, didn't sign up on a mailing list related to it, and didn't leave your e-mail address on a web form asking for more information on it, it's spam! And if it's in your mailbox, the sender might be liable for a $500 fine per instance. Some of those laws have been up held in court. See the resources at the end of this article.

3307. Spam and groups

Newsgroup: rec.radio.cb
Date: 2002-03-07 06:54:41 UTC
From: Don Freebir <hunter2009@attbi.com>
Message-ID: <R8Eh8.14909$L7.21224@rwcrnsc52.ops.asp.att.net>
Source record: 117619

I personally agree with Rock but that's my opinion. As far as spamming goes after looking I see he doesn't post that much and keeping in mind that this is a public forum that many isp's connect to and use. Also spamming can be posting things for sell, so there for there are many spammers in here. After being on the internet for many years now and around groups such as this. I have seen people post porn links and the related in groups just like this and nobody says a thing. I say if your going to hang rock then lets stop the sales also, as well as the posting of personal web pages. That would be the right thing to do because it falls under the same category as stated below.

What is Spam?
Spam is unsolicited e-mail (or news postings) pushing a point. Be it an ad for a used PC, or an urge to vote on a proposition; if you didn't ask for it, didn't sign up on a mailing list related to it, and didn't leave your e-mail address on a web form asking for more information on it, it's spam! And if it's in your mailbox, the sender might be liable for a $500 fine per instance. Some of those laws have been up held in court. See the resources at the end of this article.

Disagree with you - both on your viewpoints on the subject originally posted, and on the originator being a spammer. The dickhead is posting utter shit that has no place on any of these newsgroups, and if we can hang him (and any other of the looser spammers), then I am all for it.

Blame the sunspots, Bert. All those flares cause a blocking high at the mag pole and Siberia has no place to go but the mid-Continent. Kind of stupid when the low for the winter is March 3rd. Forecast for today is dreezing frizzle followed by a car wash stampede.

I want to buy the CB-radio integrated with car audio (radio+tape or CD). I know some companies produce those, but i don`t know which?
Could you give me some product numbers?
Also maybe someone would know where i could buy those in Germany?

Greetings

Hi Dennis,

You know, the fact that these companies were started by people that had
ham licenses should not be all that surprising.

Before the age of computers, people played with RF as their "high tech"
outlet. Those that were in the position to "know RF", also tended to
have ham licenses, as a ham license was the ticket to play in the RF
sandbox, as it were, for those who were technically inclined. Once apon
a time, Ham Radio was THE high tech hobby. Today, of course, this is no
longer true.

If you are implying that people, who hold ham licenses, should be
somehow held to a higher moral standard than the "common man", then that
would be faulty logic. A ham license is only a "permit" to use radio, it
is not a "badge of morality".

I truly believe that "every man has his price", and even though what
these supposed hams did was legal, at the time, they were corrupted by

the lure of making big money, from hordes of CBers who had little reservations about breaking the law, and were more than willing to spend their hard earned cash on anything that glowed in the dark, and made their signal stronger.

Perhaps many of these "hams" tried to comfort their own conciences by telling themselves that they, themselves, were not the ones operating illegally, and that it's ultimately the end user's responsibility to abide by the law, and in fact, until the tighter regulations on the manufacture of amplifiers were enacted, this was pretty much a legitimate claim.

Today, there's no getting around it. If you make an amp that works on 11 meters, without extensive modifications, it's illegal. This bothers some people, and make little to no difference to others. I guess it all depends on your "price".

> transmitter.

Not practical. First off, it is not illegal to sell ham gear to
unlicensed people. So there is little incentive for a dealer (or any
other seller) to refuse someone's fist full of cash. Even if the dealer
is on some sort of moral crusade, with the hopes of becoming a one man
cleanup crew of illegal operations, he would be foolish if he didn't
realize that if HE refuses to sell to people without a license, someone
else will, and he's only hurting HIS bottom line.

Someone once said that "Money talks, and bullshit walks". Money is a
much stronger motivator than morality in this day and age.

I was able to get Rileys autograph at the fest,man that was great.
I wonder what I could get for it on e-bay ?
Thoughts?

There are plenty more, and to paraphrase your own personal logic......your "professional" computer engineering advice you so freely admitted to the group..."You can't prove for certain that you did or didn't write those posts."
Touche'!

But I can disprove your paranoid angry, rabid-filled, fraudulent accusations that I did it....webtv will not crosspost...it's built in that way.
Considering the vast amount of email addy's you have had, not to mention the multiple providers you have been through since '99, and as many excuses for each, the situation speaks for itself.
It wasn't that many years ago when you asked me to join you in the hammie forums for debate, as you were losing serious ground in here, and were desperately searching for support anywhere you could find it. I declined, which was followed by your usual insults and name calling. It was at this time your forges of me started there. You were caught and called on it, and it's all there in the archives for anyone who wishes to view it. Your problem, as always, is self-destruction. (see below)

-
Yep, and sooner or later your carotid could blow.

Trying to use a new word again Twisted? Better go look it up the dictionary so you can learn to use it properly in a sentence.

Then again you have yet to have some over zealous cop try to take your
mobile rig, because you can't have a "scanner" in your car, without a
special permit, OR a Ham license.

Yes it is if you stop and consider how many times you have to show ID when paying for something using a check for example. You normally flip out the old driver's license, which has your photo on it right? You have to show a cop proof of insurance and a valid driver's license, stores ask for photo ID at times when using a credit card, bars card people who look too young to be there etc. It happens far more often than you think because you just don't think about it.

> First off, it is not illegal

Nothing was said about it being illegal, however it may come "policy" to check for a valid Ham ticket. I've seen it happen more and more at Hamfests where CBers try to buy used H.F. gear to run on 11m. It will not be the first time I have seen an angry CBer stomp off when the guy at the booth asked to see his license before selling the rig. It is also a policy of some of the large regional Hamfests not to award any transmitter to a person unless they are a licensed Ham, in the no license case a cash prize is awarded. The Fort Wayne Ind. Hamfest is one that has such a policy, and it is stated right by the barrel where the tickets are dropped in to.

http://www.pipeline.com/~dagagnon/hfmain.htm

You can contact them for yourself and verify the policy.

Wow! you just gotta love that logic! Two guys that post from the same town, same ISP & both own Jeeps HAVE TO be the same guy!
When my best friend(who also happens to own a Blazer like mine, lives next door, uses Webtv, posts to this same NG using his callsign and just happens to have the same first initial as me) comes over I'll have to explain this wonderful new logic to him. I'm sure he'll be thrilled to find out we're the same person.
Now if I could convince his cute new girlfriend of this, I'd have it made! Gotta love this flawed logic.

And there is enough of a difference between 27.405 and 28.000 MHz that a beacon on 27.405 would provide data that can't be had by one on 28.000? If the path is open on 10m I'm sure it's open on 11m. Second do you know if in fact it is legal to operate on 11m on that island in the first place? We know it is on the Ham 10m band.

yes leland. its not uncommon to listen to 27.555 to all the countries in europe booming in and tune 1 meg up to ten meters and hear a entirely different region comming thru. that 1 meg makes way more difference on HF than it does on 2 meters. 11 stays open at times 2-3 hours after ten meters in the evening towards the pacific area so in that instance the beacon will be better on 11 since the whole entire point of that beacon is to help find the best signal paths to and from Nauru on 11 meters. now why you insist a 10 meter beacon would be better at helping us find 11 meter propagation i dont know. the fcc has no jurisdiction in the pacific ocean.

Your probably right Dave, but the
HRO (Ham Radio Outlet) out here has
always required a license to purchase
any amp.
On the radios, they don't because they
feel that is less of a chance to cause any
problems.

I know this and you know this but there are some who have trouble
understanding it. If these dolts where to read the letter of the law as it
was ORIGINALLY written, they would find that ANY frequency broadcast on was
open to be received. This took a beating during a world war and some funny
little state laws such as Virginia and Connecticut's ban or radar detectors.
Although this is a simplification for demonstration use you can easily get
the point!
Train

Hi Train,

"dot.com CB Companies" is a phrase used to illustrate how fast Companies can rise and fall. The CB craze happened long before the internet was was common place.

Pre-browser days..? you were using a terminal logged into a BBS. Ahhh... those were the days. Let me guess... you were an Atari, Comodore, Radio Shack, TI-99, Timex Sinclair type of person..?

cheers

Selling ham gear to unlicensed people is known in business circles as 'pissing in the soup'. No one is on a morality crusade any more than the parts store that wants full list without a tax number is on one. It is called taking care of them what butter your bread.

Sure. Take your pick. Straight from Google, as you requested. And note
that these posts actually exist, unlike the whacked things you try to
put forth and constantly fail at.
The only thing you proved is the fact that you can't tell a forged post
from the real thing. That has been what I have mentioned for months now,
and you still can't tell the difference. I don't know if I should feel
sorry for you, or tell you to go sniff your "jock strap" collection some
more. For all I know you were the one who posted those messages in the
first place using one of your alternate ISP accounts.

Check it out. I went to the old storage hole in the loft and was looking for that Gene Tracey tape...FOUND IT! The show was live from Charlotte... complete with "Hurricane Gussey" and a buncha other great stuff...thing is, it's an 8-TRACK!! But I also have an old analog 8 track player that actually still works (we listened to the entire tape last night) , so if all else fails and you can't find it anywhere on the web, I can always make a cassette of it using a condenser mic on an old fashioned cassette tape recorder unit close up against the 8 track player, then I can clean it up on my sound system before sending it to you.

I just got an emperor 5010 and am very happy with it, however on band C (US CB channels) it works fine until you get to channel 11 then the next channel up is channel 11a that's fine, but what about 3a, 7a, and so on they are not there, only 11a. Can someone please tell me if that is normal because I can't see that it is. If it is not normal what can I do to fix it, I like having the "a" channels but only 1 is bugging me. Also is there a chipswitch for these I was told there was, and if so what does it do for the radio? One more thing any more mods would be greatly appreciated all I have are the channel mod (pulling the resistors) and the rit mod and some limiters, Thanks any info would be greatly appreciated

Well Tim, your man Dennis got the ball rolling. No one forced him to post his claim that every illegal amp company ever founded was done so by hams. If that ain't "bringing trouble to others" I don't know what is.

Everyone knows that all hams are not saints. (One has only to look in this NG for evidence) Neither are they all sinners.

Personally I don't care one way or another if Dennis' statement is true or not. I just want to see some proof --- other than Dennis' heresay.

I would also like to know what his point was in posting something like that, other than to stir up trouble with hams. You guys hold Dennis up as some kind of 'keyclown hero'. His is more the behavior of a man with a chip on his shoulder.

Lastly, you have to wonder how Dennis knows so darn much DETAIL about CB amp companies. Heck, I can't even recall the names of 10 illegal CB amp company names. Dennis apparently can list 26 (one for every letter of the alphabet!) including the ham license status of each owner! This level of detail is not the sort of information someone just picks up casually.

So, in summary, Dennis made a highly unusual claim. Which is why I asked for substantiation.

I believe my Heathkit DX-35 used screen grid modulation, but never used am as I used the DX-35 during my novice days only. I got a Johnson Ranger when I got my general. As my code speed rapidly grew past 40 words per minute, I found I still used mostly CW even after getting the general and extra tickets back in the 60s.(whew, another trip thru the way-back machine!)

3355. More SWR questions .....

Newsgroup: rec.radio.cb
Date: 2002-03-07 23:19:31 UTC
From: akwusmc@aol.com
Message-ID: <3c87f4cd.46348167@news.tn.comcast.giganews.com>
Source record: 117667

All,

I'm trying to help another driver where I work set his SWR's. I'll try to describe the setup:

He's driving a GMC roll-back. The radio is a peaked Cobra 25 LTD Classic. The antenna is a single Wilson Silver Load, 3'. It's mounted on a generic aluminum mount (the kind you find at the fuel stops), and he's using a spring, with the antenna tilted forward.

When I did initial SWR checking, I determined that the antenna was 'long' (SWR on channel 1 was lower than on channel 40). We lowered the adjustable tip as far as it would go, but SWR was still over 3:1. Then I checked coax (I know, should've done that first), both the main coax and the jumper to the meter ..... all checked out. The antenna has a grounding pigtail, so I checked the connection to ground, and it checked out as a good ground. I was able to get SWR's down ever-so-slightly by moving the antenna to vertical, but not enough to get below 3:1.

Now, the brass connector that goes through the mount is not in the best shape (dirty, corrosion), nor is the nylon washer (not cracked though, just mashed). I'm going to recommend he change all that with new components. I was also reading on the Firestik web site that you can remove a spring to 'shorten' an antenna, if needed (I personally don't use one, but it's not my monkey).

I don't know what the coax length is, but from what I've read in the other threads, it doesn't matter ..... the quality of the coax is probably garden variety truck stop coax at best.

Any other ideas???

TIA,

Anthony

I suspect some bright soul wanted 27.995 and did a goof mod.

And this is not the only goof mod. Cutting a limiter, any limiter, is
stupeeeeeed. I know the word limiter stirs the blood of any red-blooded
American Rebel Without a Clue but it sucessfully cuts your talk power by
about half and is usually used to sell you a Line-eee-ar. In the
broadcast biz, limiters are used to *increase* the louditude of their sig
and the knuckle-draggers want to cut them out with their toenail clippers.

You should also be aware that everything above E11a is in the ten meter
ham band and it is being defended by every means possible including photo
traps on major hiways.

Strongly suggest returning it to Red the Tech at Happy Larry's Truck Stop,
Funeral Parlor, and Emporium of CB Delights.

No. Controlled carrier modulation can be produced via CGM, but it is
not necessary to do so.

CCM had a relatively short life in Amateur radio, only a few years.

Ah....another AOLer assumes something. Wonder why AOL has been pinned with
the "lamer" moniker? Could be because of Voob, but then again, he's not the
only imbecile to use AOL.

-
Yea, this one is funny. I couldn't remember the spelling either. Here
goes:

Track 1
Hunting
Religion and Politics and Sex

Track 2
Half Breeds
Hurricane Gussey
Stale Eggs

Track 3
Faggot! Eat no meat
Turkey Contest
Schooling
The Big Fight

Track 4
Airplane ride
Stealing
Weenie
Big Shoot Out

The front of the tape reads: Gene Tracy and Wild Man Steve
Rated
X
Gene Tracy's Truck Stop
Adults Only
No. 8
The Great Insult

news:9317-3C87C779-17@storefull-2317.public.lawson.webtv.net...
-
Awwww...but YOU began all this bullshit
-
If I remember right
-
You never remember it right, lelnad, which is why you are reduced to
such tactics as you employ. Besides, no one ever remembers it your way,
Lelnad, except the subscribed members to Camp Kennel Trouble...
-
it was an unsolicited E-mail from you, to me, where you alleged to have
divulged your so called secrets where you mark your posts so as to
validate them.

-And google contrasts with your claims, as shortly after you invited me
into the hammie forum and I declined, you forged me in there anyway, was
caught, and chastised by the hammies for your juvenle behavior and true
to form, you immediately attack the hamies who pointed out your
bullshit, with a topic totally unrelated. Same tactics, different forum
and time.
For a year or so I couldn't figure out why someone would do such a
thing, then you searched the web on me and post the Sporadic article,
and it backfired. Well, you just couldn't have that, could you? An
alcoholic like yourself, bragging about your computer prowess and
college education, put in your place by a couple of redneck hicks that
manipulated you into cornering yourself...heheheh,,,now it only takes
your liquor and a bit of anger for you to spout off something really
stupid and self destruct, such as putting on display your ignorance for
all to enjoy!

Then somebody discovered your methods after which you just lost it, and
blamed nearly everybody

-Not everybody, just the guilty few.,and not "somebody"...you and your
posse of trouble.
I blamed you right after you were blamed by the hammies for screwing up
their forum with the same drivel you fail with here. Wanna see those
posts again so we can all see how you attack unbiased hammies for
busting you with your bullshit? I mean, you are trying to salvage an
unredeemable image here, ya' know.

in the group for using those methods in the forged posts showing up on
the group. Of course you couldn't figure out who was doing it, and you

still can't.

-I don't care about it, you do. Getting your jollies has long been a favorite of yours by playing "guess who did it?", you try to make others give a damn about who is who,,fact is, we don't care,,you're all trouble,,,nothing more, what you choose to call yourself is irrelevant and that, my little follower, was observed several times of you, by several unbiased individuals.

So the record Twisted is YOU started the BS, and nobody else.

-Google makes a liar of you, as do your own words, many times over.

You're the group's punch clown Twisted because you don't have the brains to figure out who is doing it,

-An insult along with an implication that I somehow care who does what in your pathetic corner of swine you frolic in so joyfully is ironically hysterical considering the source.

or anything else, except for making a fool of yourself everyday here. And I have better things to do with my time than waste much of it talking to a fool such as you.

--
Leland C. Scott
KC8LDO

-You never did amount to much Lelnad, here or in the hammie forums, and you're liked about as much in each, and I certainly fail to locate your name on any of the more important private discussion forums concerning radio, you know the ones, where the true innovators are, HAMMIES included. Perhaps you never received an invitation. Perish the thought. Must have been an oversight on our behalf. I'll see what I can do.

Leland, maybe I should put a small 100mw beacon up on 11 meters. Say put it 27.405 lsb running modulated cw. By feeding it into the LSB mode thru the audio pin on the radio. I could use a weather proof box almost right at the antenna feedpoint so there would be no line loss with the 100mw. This project shouldn't be that hard to make up. I think I will start this up and see if I can get it to work. I will keep all advised.

No argument. Shows where the market is and how much the disapproval of
the Amateur community means these days. Also why Antique Modulation is
grafted onto every rig in existence.

My whole point is don't turn a simple business decision into some kind of
crusade. Vote with your wallet and if you don't have some money in the
poker game, shut the hell up.

Why do you care? Honestly, what is it really any of your concern, Did you ask Scott why he changed his name again? why are concerned about it? just because you don't like it makes me want to change it again. Go cry to another Isp as they laugh at you too. Ill always be here no matter how you try to get rid of me I am like a hemmoroid learn to live with it.

Source record: 117700

Hello Jim 578:

Your e-mail just came back, nobody at home it said.

The mast will need to be at least 1 1/2 inch Galvanized or better. The mounting clamps will take a 2 inch OD Diameter, and a 4 x 12 plate can be made with the 3 inch clamps that will take of course 3 inch OD mast sizes.

Most towers use a 2 inch mast, and some of the bigger ones use 3 inch OD.

All the aluminum tubing is double wall reinforced, with the Extreme & Severe Weather E&SW option, of course it costs more. But will take all the ice and weather at a mountain top repeater site. The extra 129 dollars is nothing compared to a service call for the Motorola boys in Torance.

The Comprods or Station Masters, use a 4 inch OD base, but use a neat set of adapter steel pieces to allow it to be mounted to a 4 to a 2 inch OD mast.
These antennas are made for a particular band of frequencies, but can be adjusted to a user operating frequency, with a internal adjustment. Its just not published a bunch.

Another consideration is the mountain top lightening protection. I remember on Mt. Lukens a direct lightening hit took a hole utility building out, with all the radios and stuff. They will make you ground the mast big time.

Have a good one, e-mail when your back on line.

Jay in the Mojave

3388. stop human cloning????

hey,why would you wanna stop that?? i hope like hell somebody clones my ass......i would love to have a genetically identical copy of my self in the "freezer" when im told i need a new liver,heart,lungs,kidneys etc.

hey,think about it....no waiting lists where you "might" get what you need. no chance of rejection...its your tissue!!!!! and no morality issues either,you could engineer the clone to have only the "lower" brain function...enough to keep the heart pumping ,and the lungs filling. no higher brain...no "person" besides it would be your own tissue,like storing your own blood in case of an emergency.
i personally hope you nimrods fail in your quest to stop cloning/genetic rersearch.
if people like you ran things, there would be none of the truly wonderful treatments and cures that we enjoy today. why do you want to promote human suffering ,and not "cures" to end that suffering. like jesus said in the parable of the good samaritan...".why would you walk by,and do nothing...when it is in your power to stop the suffering" who are the truly evil ones?????????

Oh, Brother...

First off, check the grounds. Use a properly grounded antenna, no magnet mounts. Ground the radio and amp to a good chassis ground with heavy gauge wire. Also run a hot and ground to the battery.

Connect the chassis of your head unit to splitter, passive EQ or what not together with 16 gauge STRANDED (always in a mobile) wire, and connect to body, chassis and battery. Connect the audio amps to a good, solid ground. Use high quality shielded cable for all audio and RF amp interconnects. Keep speaker wires short and do NOT use any length in nine foot increments. Now strip a small amount of outer insulation from your antenna coax, six feet from the antenna. Connect a braid from this point to a solid metal part in the vehicle. This will help to decouple the RF that may be on the shield. RF connections need good cables and connections, and crimped connectors always go bad even if they look good. A good DC reading with a VOM doesn't mean squat to RF. I have no problem with feedback in my killer system. (Multi amps and many pieces.)

I had to run ground straps from the chassis to the box itself. That worked for me.

Geeez! Get a life! Even Art Bell doesn't spue out this sorta stuff.

Actually I'm kinda ambivalent about cloning as long as they don't do it
to democrats.

Don't you love wankers who dress up their idealogy as being patriotic, and the like?? Wish the wankers would just say what they wanted to without trying to deceive us all - and even more so, I wish they would fuck off and spam the groups where the sort of shit below is meant for, and leave our groups out of it. Last thing I am saying on this one, and I have added this thread to the ignore list.

Cheers

Matt

3400. Re: emperor 5010

Newsgroup: rec.radio.cb
Date: 2002-03-08 06:05:23 UTC
From: Pamala Dardy <tpdd@earthlink.net>
Message-ID: <DwYh8.2478$Vx1.168149@newsread1.prod.itd.earthlink.net>
Source record: 117712

Ok but above 11a is 12 not 10 meter its just channel 12 but that aside
I just need to know how to add the other "a" channels or take that one away
it seems stupid to me to have 1 when there are like 5 either all or none I
can still get to those frequencies but it would be nice to have easy access
Thanks

Dave,

The message was not meant to throw stones at any Ham Operators, but rather to indicate just how hypocritical it sounds to me when I hear all the criticism of the customers who purchased the equipment by those who created the market for that equipment in the first place.

Regards,

Dennis O.

So if someone gets a ham license they give up the right to complain about illegal CB operation? This is news to me! I wonder how Leland, Dick, Bert, and the others are going to respond.

And what about the CBers who bought the equipment? You're acting like they had no choice in the matter. "Oh it's not the illegal CB'ers fault. The hams MADE them buy amps". LOL. You're full of it, Dennis.

3403. PSK-31 on 11 meters

Newsgroup: rec.radio.cb
Date: 2002-03-08 07:36:35 UTC
From: mybigcb@aol.com
Message-ID: <20020308023635.14618.00000209@mb-fc.aol.com>
Source record: 117715

Just wondering if anyone is trying or has used PSK-31 on the CB band?
Looks like a fun thing to try out. If anyone is doing it what freq(s) are
you at. I know that I've seen SSTV at 27.700 , maybe we could try
some PSK-31. Anyone up for it?

I suppose if those who were complaining about amps were the same people
that started the amp businesses, that would be genuine hypocricy. But
usually this is not the case. People who complain about amp use on CB
are people who, for the most part, are also CBers (some of whom are also
hams) that are disgruntled that their once wonderful hobby, has been
overrun by the RF equivilent of the WWF, along with the WWF attitude.
Many CBers upgraded to ham status simply as an escape from this 11 meter
madness. Many find ham radio to be a notch better with regard to
interference, but also lacking the free form, good natured, fun that
used to be a regular occurance on CB in days gone by. This is why many
hams are vocal about CB, because they used to be, or still are, CBers.

I know, I for one, would love to see CB return to the state that it was
in, in the mid 70's. Sure we had amps then, and many played with illegal
frequencies. But it was low key and low profile, and it didn't disrupt
the rest of the band.

When I said that it's not practical, I meant that as long as it's not
illegal to sell ham gear to unlicensed people (afterall, how are
prospective hams supposed to listen first?), and showing a ham call is
not mandated by law, then it becomes one of individual policy, depending
on how morally conscious you are. If you are a dealer, and you won't
sell to unlicensed people, and Joe Truckstop down the street does, and
he gets all the business, what does that say? If your "legitimate" ham
business is so great that you can afford to lose a few "questionable"
deals, then fine. But the last time I checked, the ham gear dealer
business is not all that profitable, these days. Especially with large
volume mail order places, and E-Bay competing for your customer's
dollars.

>
> > First off, it is not illegal

> first time I have seen an angry CBer stomp off when the guy at the booth
> asked to see his license before selling the rig.

It's one thing for an individual ham to make a moral decision to not
sell to a "questionable" buyer. He can hold out as long as he wants to.
It's his decision. He may not be desperate for the money (yet), and can
afford to find the "right" buyer. It's not the same thing for
businesses. You would have to be blind not to acknowlege the greed
factor, when you're in business.
I've known people that call HRO or one of the other dealers to buy gear.
The dealers ask for a call, and they say that haven't gotten it yet, and

the dealer still processes the order. I guess they don't want to turn away a $1000 sale. With Yaesu, Icom and Kenwood setting volume minimums in order to maintain their franchises, these dealers have to sell equipment. The last thing they are going to do is worry about where the radio will end up.

> It is also a policy of some

> awarded. The Fort Wayne Ind. Hamfest is one that has such a policy, and it
> is stated right by the barrel where the tickets are dropped in to.

It's their decision as well.

All I'm saying is don't expect this to become a universal policy, as long as it is not mandated by law.

I trashed the first post because of the subject title, but just *had* to
check it out when the thread ran forever, but I have a comment to make on
this issue..

This country was NOT FOUNDED ON CHRISTIAN PRINCIPLES!! The so-called
"Founding Fathers" were comprised of freemasons and deists, many of whom
though they believed in "God" or "a god", they did not believe that he had
any interest in mankind or their affairs. The United States Seal of which
both sides were accepted in 1782 are rife with occult mystical symbolism,
and the motto "In God We Trust" was not even accepted for use on coinage
until 1878 and paper money until the 1950's, and neither does in mention
which "God" that the government allegedly puts their trust in..

I get tired of hearing from the sheep about how this government is so lily
white and founded on "Christian" principles, which lie parallels the lies of
Josef Gï¿½bbels' propaganda machine which stated to the effect of "continue
repeating the lie to the people often enough, they will eventually come to
believe it as the truth." The Nazi belt buckles contained the words "GOTT
MIT UNS", or "GOD IS WITH US", so did that mean that God was on their side?

They can put this in their pipe and smoke it, cuz this is documented history
and can be verified through a relevant information search.

Source record: 117743

There should be no problem with Ebay, but my guess is the original listing had 1 of the following problems.
Ebay won't allow if caught an Amateur radio to be listed in the "CB" catagory, weather or not it is modified.
Ebay also won't allow any mention or hints of "mods" capabilities, CB, or freqs outside 10M, when listing a 10M radio.
If the item is listed in the Proper Amateur radio catagory as a 10M only rig, there shouldn't be a problem.

There has in fact been one or two cases in the past couple of years around here. One of which I heard the Ham in question relating his experience to several others on a local repeater. It wasn't a nice story. Seemed it was a new cop, and he didn't take kindly to a suggestion to check with the station for legal advice first on just what the law is in Michigan.

And there was another guy who got screwed coming in to Michigan, from Ohio, and he had a scanner in his car. He was trying to get a movement together of other scanner users to get the law in Michigan changed. You can check this all out on the scanner news group.

Yes it is a interesting fact you flaming faggot, funny how you started shit again now you want to start blaming me for forging? Who has been forged and what proof do you have I am the forger, looks like someone else likes pulling your chain too Landwhale knowing full well you would of course blame me. Eat shit and die you homo. You cannot talk about radios so you need to fill your post with this shit.

Yep, that's a diode. I just see the numbers "00" so it's probably a
1N400x, which is a general purpose rectifier.

BTW, those things don't just fall off the board.

>some PSK-31. Anyone up for it?

There are many people that do SSTV and PSK-31 as well as AMTOR,
PACTOR, Coherent CW, RTTY, Feldhell, FSK, PSK, TOR-FEC, FAX, WX FAX,
SITOR-A/-B/FEC/Navtex, SSTV, DCF-77, ACARS, WWVB, etc.

But you won't find many of those operators on 27.700MHz, most seem to
prefer the ham bands. I suppose if one is going to spend his time,
money and energy operating with any of these modes, and since most of
those contacts are made on the ham bands, then one might consider
postponing a hangover for one weekend and get a license.

I'm all for the return of licensing. It should have about a $25.00
fee. These fees can be used to create a Citizens Radio Enforcement
Division. Obviously, they couldn't bust them all. But it could take
care of foul mouths, troublemakers and splatters.

I'm not trying to sound like boobnerd. Things need to be done, but
Mrs. A. is doing nothing but trolling the NG. Ignore the Bitch!

It's not just the government and the tax money they steal, it's their overwhelming influence in the media, particularly in the "entertainment" industry. They have systematically destroyed most of the racial roots of people of European decent in America.

They also never serve a real sentence in prison when they are caught committing a crime. Think Michael Milken, Ivan Bosky, Marc Rich and the little Long Island PR agent Lizzie Grubman who ran over 16 White people with her SUV after screaming "White trash!" before stepping on the accelerator.

That's what Jews think of White people. They think almost all of us are "White trash", though the term they like to use is "goyium" or Goys" which means "cattle". They look on us as genetic garbage that are here to serve them.

American Dissident Voices Broadcast of March 2, 2002

Jewish Hate, the Media, and the ADL
By Dr. William Pierce

Hello!

Last week I mentioned that a record company I own, Resistance Records, was attacked in an hour-long special TV program on one of Sumner Redstone's music television channels, VH1. Redstone, who was born with the name Murray Rothstein, is one of the most powerful of the Jewish media masters. He owns not only VH1, but also MTV and the CBS network. His MTV specializes in encouraging young Whites to mix with and act like Blacks. He promotes "hip hop" culture and rap music among White kids, persuading White boys to talk Black and wear baggy shorts and backward baseball caps -- and persuading teenaged White girls to have sex with Blacks. He is probably the most destructive and hate-filled of all the Jewish media bosses.

The special VH1 program to which I referred was called "Inside Hate Rock." "Hate rock" is what Redstone and his people call the music I produce and distribute. Actually there's nothing hateful at all about my music. Its purpose is to help young White people have a sense of identity and pride and purpose, all things that Redstone and company are trying to take away from them. Redstone's aim -- and the aim of the Jewish media bosses generally, whether they're in Hollywood or on Madison Avenue, is to alienate young White people, to uproot them, destroy their sense of racial identity, confuse them, make them forget their traditions and their history, and persuade them to mix with Blacks and other non-Whites. That's why Redstone promotes rap music so heavily. His ultimate aim is to destroy our people, our race. And because I'm trying to counter that with Resistance Records, he calls me a "hater"

and calls the music I produce and distribute "hate rock."

Well, in addition to music, Resistance Records also produces and distributes video games. A new game that we've just begun distributing is named Ethnic Cleansing. The kids really love it. It's selling like hotcakes. Not only was our music attacked in the VH1 special I mentioned, but our new video game also was denounced as "hateful." And then one of the most powerful and hateful Jewish pressure groups, the Anti-Defamation League of B'nai B'rith, also jumped on the bandwagon and began screaming about our new game. "It's violent!" they screamed. "It teaches children to hate!" they screamed.

Let me tell you: every video game I've seen is violent. Combat is the most common theme of video games. That was true even back in the days of the first, primitive video games, such as "Donkey Kong" and "Pac Man." Most video games today involve shooting people or hacking people up with swords or other weapons. And I'm talking about games marketed by Sumner Redstone's fellow tribesmen. I'm talking about games produced and distributed by Jewish media companies that make regular donations to the Anti-Defamation League of B'nai B'rith. The Anti-Defamation League doesn't scream about those games.

Some parents are alarmed by the high level of violence in the video games their children play, but the Anti-Defamation League isn't. Perhaps violent video games aren't good for kids. I don't really know, but they are a fact of life. Many kids spend most of their free time playing video games.

The point is that Sumner Redstone and the Anti-Defamation League think our game is "hateful" and "dangerous," but not other video games. Why is that? What's the difference?

I'll tell you: our game -- Ethnic Cleansing -- is a game designed to raise the racial consciousness of the White kids who play it. That's why Sumner Redstone and the Anti-Defamation League hate it. That's why they are screaming about it. That's why they're denouncing our game as "dangerous" and complaining about the violence in it, but they aren't complaining about other video games that are at least as violent. A game that has an American GI in the Second World War shooting Germans is OK with Sumner Redstone and the Anti-Defamation League. Likewise for a Civil War game in which Yankees and Rebels slaughter each other. They think that's fine. But our game, which involves urban guerrilla warfare between Whites and non-Whites they call "hateful" and "dangerous." In other words, it's OK for Whites to fight against each other. It's OK for Whites to kill Whites. But it's not OK for Whites to fight against non-Whites. That's taboo.

Anyway, our game, Ethnic Cleansing, is designed to break that taboo. Our game is designed to teach White kids to stick up for their own people. It's designed to help White kids shed the racial guilt and self-hatred, the sense of racial inferiority, that Sumner Redstone and the folks in the Anti-Defamation League have worked so hard to instill in them. It's

designed to help them think in terms of Whites against non-Whites instead of Whites against other Whites. That's why VH1 and the Anti-Defamation League hate it.

But, you know, we shouldn't be surprised about that. VH1 is owned by a Jew. It's a Jewish propaganda channel. The Anti-Defamation League of B'nai B'rith is a Jewish pressure group. Their aim is to destroy White racial consciousness and to break down any feeling of White solidarity. The last thing they want is for Whites to learn to stick up for themselves. So we expect them to hate us and denounce us. They have their agenda, and we have ours.

Everyone should understand that, but most people don't. The reason they don't is that all of the mass media, even those few not yet owned by Jews, collaborate to keep the Jewish agenda concealed from the public. The media routinely refer to the Anti-Defamation League of B'nai B'rith -- and from here on I'll just call it "the ADL" for short -- they routinely refer to the ADL not as a Jewish pressure group or a Jewish propaganda organization or even as a Jewish lobbying group, but as a "human rights organization" or as a "civil rights group." Really. The media want the public to believe that the ADL is an impartial group concerned with what's good for America rather than with what's good for the Jews. In fact, most media won't even tell you that it's a Jewish organization, with strong ties to Israel.

So let me tell you a little about the ADL, and you'll understand better why they do what they do. And you'll also see a little more clearly the crookedness of virtually all of the mainstream media in America. The ADL was organized in 1913 by a group of rich Jews specifically as a response to a notorious child-rape and murder in Georgia. Leo Frank was a Jew who owned a pencil factory in Atlanta. In 1913 he raped and murdered one of his White female employees, 14-year-old Mary Phagan. He was tried, convicted, and sentenced to death. The governor of Georgia, in response to Jewish lobbying -- and, most believe, in response to a large Jewish bribe -- almost immediately commuted the death sentence. Angry Georgians then seized the Jewish child-rapist and murderer and hanged him.

The Frank case was widely reported in Georgia newspapers in great detail and caused much hostile feeling against Jews. The purpose of the ADL was to deal with such matters in the future by attacking and attempting to discredit anyone opposed to Jews or Jewish policies, by generating pro-Jewish propaganda, and by exerting influence on legislators and other public officials in a more discreet manner than the rather clumsy way in which the Georgia governor had been persuaded to commute the death sentence of Leo Frank. After the formation of the state of Israel in 1948 lobbying for military and financial aid for Israel also became a major ADL activity.

The ADL still does all of those things today, and in my case the group's principal activity has been attacking me and attempting to discredit me. In fact, the ADL devotes so much of its effort to attempts to discredit anyone who opposes Jewish policies that it is known in some quarters as

"the Defamation League." The ADL regularly refers to me as a "terrorist" and claims that I am "linked" not only to various terrorist acts, such as the Oklahoma City bombing, but also to bank robberies, murders, and other acts of criminal violence. For example, my "link" to the Oklahoma City bombing is that Tim McVeigh, whom I didn't even know existed until I saw him on television after he was arrested -- Tim McVeigh is said to have read and been fond of a novel I wrote 27 years ago, The Turner Diaries. The other so-called "links" are even more tenuous. And yet the mainstream media regularly quote the ADL in saying that I am "linked" to terrorist and criminal activity, and they describe the ADL almost as if it were an official source of information.

So let me tell you: I have never been involved in any terrorist or criminal activity of any sort. But the ADL has. In November 1992, after confidential police files were stolen from the San Francisco Police Department, an investigation was begun that led eventually to search warrants being issued. On April 8, 1993, both the San Francisco and the Los Angeles offices of the ADL were searched by police teams armed with these warrants, and more than 12,000 stolen confidential police files were recovered. Most of these confidential police files didn't have anything to do with criminal activity but instead contained personal information on individuals collected by the police in connection with driver's license applications, pistol permits, security clearances, and other routine matters. What the individuals in all of these police files had in common is that the ADL considered them "enemies" because they had at one time or another, in some way, opposed some Jewish policy or some Jewish interest. Some of the individuals in the stolen files were legislators or other public officials that the ADL wanted to bring pressure against.

Other criminal activity by the ADL in addition to the possession of the stolen police files also came to light in 1993. A San Francisco Police Department inspector, Tom Gerrard, who had been receiving payments by the ADL to steal the files for them, fled to the Philippines to avoid prosecution. And evidence was found during the search of the ADL's San Francisco and Los Angeles offices that the same sort of bribery, corruption of police agencies, and illegal collection of confidential police files was occurring in New York, Washington, Chicago, St. Louis, and Atlanta.

Unfortunately, the ADL already had corrupted the judicial system in California to the point that it was able to stifle further law enforcement action, and very shortly thereafter the mass media in California, which initially had given substantial coverage to the case, were persuaded to drop the matter as well.

Some of the individuals whose confidential files had been stolen by the ADL were not ready to drop the matter, however, and they filed civil suits against the ADL for invasion of their privacy. With the enormous resources of organized Jewry behind it the ADL fought these lawsuits tenaciously, appealing every adverse decision. Finally, however, after

nine years in the courts, the ADL last week paid damages of $178,000 to the last three victims of its illegal spying. I'm sure that you didn't see anything about that in the news last week, because after the initial publicity back in 1993 the mainstream media have ignored the case. They continue to refer with respect to the ADL as a "human rights organization," with never a mention of its criminal activity. And they continue to quote the ADL's hints and suggestions and insinuations that I am somehow "linked" to terrorist and criminal activity. It is, of course, the ADL, not I, who is engaged in criminal activity, but you would never know that if your source of information is the mainstream media. For those listeners who have access to good reference sources, however, find yourself a copy of the Los Angeles Times from April 9, 1993, and read all about it.

Actually, the ADL's stealing of police files is the least of its criminal activities. It just happens to be one activity where the group made a slip and got exposed momentarily. Far more serious are the ADL's links to organized crime: to the Jewish master swindler Marc Rich, for example, or to the Jewish gang boss Moe Dalitz. If you were following the news closely in January of last year, when Bill Clinton, just hours before leaving the White House, issued a number of pardons for criminals, an inordinately large percentage of whom were Jews, you will perhaps remember the controversy around his pardon for Marc Rich. Rich is a billionaire international commodities trader. He was indicted on a large number of criminal charges, including wire fraud and money laundering, before fleeing the country to avoid prosecution. He has given huge sums from his ill-gotten loot to Israel and to the ADL. The ADL chairman, Abe Foxman, wrote to Clinton specifically requesting a pardon for Rich -- and of course, Rich got his pardon.

Moe Dalitz was the boss of Detroit's all-Jewish "Purple Gang," which got its start smuggling illegal whiskey into the country and then branched out into White slavery, loan-sharking, illegal gambling, and contract murder. After the Second World War Dalitz moved into the casino business in Las Vegas and eventually became the leading gang boss there. And he gave generously to the ADL and other Jewish organizations. He was one of the ADL's biggest donors during the 1970s and early 1980s. The ADL reciprocated by presenting Dalitz with its annual "Torch of Liberty" award at a formal dinner in his honor in Las Vegas in 1985. Dalitz and seven other gangsters were killed in a gang shootout shortly thereafter.

What's important is not that the ADL consorts with gangsters and engages in criminal activity. What's important is that the news media conceal that from the public and treat the ADL as a respectable "human rights organization" that can be relied on for accurate information about people like me -- or about anyone the Jews consider an obstacle to their policies. That's bad. That's very bad, and it's dangerous -- and not just because it misinforms the public about people like me. It's dangerous because it allows the ADL to represent itself as an authority. It gives the ADL much more power to corrupt.

It was bad enough when Jewish groups had only their money to bribe politicians and judges and law-enforcement officials, as in the days of Leo Frank. But now, with the collusion of the mass media, the ADL is able to wear a false cloak of authority. And the unfortunate fact is that whenever a military or law-enforcement person sees someone wearing a cloak of authority, his tendency is to salute and wait for orders. Most of us have at least a bit of an authoritarian streak in us, and I don't think that's necessarily a bad thing. Military and law-enforcement people, on the average, have a much bigger streak of authoritarianism in their personalities, and that's not necessarily a bad thing either. But when the ADL uses its false cloak of authority to influence America's legislative, judicial, military, and law-enforcement establishments, that's a very bad thing -- and very dangerous for the freedom and even for the survival of our people.

And in fact, the ADL is using the false cloak of authority bestowed on it by the mass media to cozy up to and corrupt military and law-enforcement people all across America. The Jewish mass media have prepared the ground by talking so much about "hate crimes" and "hate speech" that they have convinced large segments of the public that any printed material or public statement that is not Politically Correct is "hate." Anything I publish, for example, is automatically labeled as "hate" by the media. If I criticize America's insane immigration policy, the media will call that "hate." If I complain about the government's policy of putting Israel's interests ahead of America's interests in the Middle East, that's "hate" too. I could publish a book on bicycle repair, and the Jewish media would call it "hate." The media have the public sensitized to that word -- and they've done that deliberately. And they have the more simpleminded elements of the public convinced that there's something illegal about publishing or distributing anything the media have labeled as "hate."

If, for example, members of my organization, the National Alliance, distribute leaflets calling for a halt to immigration from the Third World -- or even demanding that the government enforce the immigration laws it already has by stopping illegal aliens from coming across our southern border -- the media invariably will use the word "hate" in every other sentence in reporting our distribution. And then some of the simpletons will call the local police or the FBI to report that our leaflets were left on their front porches, believing that a crime has been committed.

All of that is bad enough. But then somebody from the local office of the ADL will approach the local police chief and offer the ADL's help as an authority on "hate" and "extremism." "We will explain to you how to recognize 'hate crimes' and 'speech crimes,'" the ADL will say. "We will teach your officers who the haters are, and we will explain why you should keep an eye on them and harass them and arrest them whenever you can."

Ordinarily any self-respecting police chief would resent someone like that telling him how to do his job. He would tell the ADL busybody to

buzz off -- especially if he knows that the organization offering its advice is a criminal organization. But usually he doesn't know that, because the media have kept that a secret. Usually he thinks that the ADL is an authority, almost with an official status, because the media deliberately have created that impression. And so the ADL is able to worm its way into local law enforcement and exert its destructive influence on the way the law is enforced. In many cases it is able to persuade the police to violate the civil rights of people it doesn't like. For the police to let the ADL tell them how to recognize and treat so-called "haters" is like the police going to the Mafia and seeking advice on how to deal with organized crime.

And the ADL does the same thing with our armed forces. It's like having the Pentagon hiring active, practicing al-Quaeda members to teach the military about terrorism and how to recognize a terrorist. It sounds crazy, but we actually have the greasiest of Jews whispering into the ears of police and military officials all over America, telling them how they should do their jobs. We actually have such Jews with ADL connections installed in offices in the Pentagon, in the White House, and in the Justice Department.

That's a bad situation. Like many other bad situations in America today it has arisen directly from the Jewish control of the mass media.

What can we do about it? Well, you know what I'm doing. I'm building alternative media as fast as I can to counter the Jewish media. I'm happy to have your support for my work.

Here's something else you can do. If you know anyone in law enforcement, ask him whether or not his department has been approached by the ADL or has hired the ADL to give training of any sort to the personnel in his department or whether or not any ADL propaganda has been circulating among members of his department. If his department has had any contact at all with the ADL, tell him what you know. Tell him that you are alarmed and outraged that his department is involved with a criminal, anti-American organization that is working to undermine our Bill of Rights and destroy our Constitution. Get him to help you spread this information to other members of his department.

Thanks for being with me again today.

OK so fine, butchered, not realy this radio was just gone over by one of the
best techs in the area and is one of the cleanest damn radios that I have
ever seen (used) inside and out but how would I get rid of this thing? or
add the rest?

>the path is open on 10m I'm sure it's open on 11m.

Yeah perhaps Leland, but you know what? I'd rather see folks putting 100mW propagation beacons on 11-meters than a X-Force class C amp driven by an AM only splatter-box the the audio limiter "clipped." It's hardly "a waste of time and effort" to those who put forth the effort or those who appreciate the effort. I appreciate ANY effort spent on improving the image of CB/11-meters. While the silly 155.3 mi. rule still prevents us from QSOing with the island of Nauru, it's still legal to monitor and request a QSL card to confirm signal reception. Bravo!!!

>Second do you know if in
>fact it is legal to operate on 11m on that island in the first place? We
>know it is on the Ham 10m band.

Frankly, this doesn't concern me. (or you either?) If you're going to operate a US based 11-meter beacon, stick to the Part 15 rules and you'll be ok. Another government's rules?...we have enough garbage to clean up right here, on both the CB AND AR! What I find far more interesting is; why is there such a discernable effort to "rain on this parade?" This guys doing nothing illegal on our shores and if he is on Nauru's, then it's Nauru's issue.

>> I think it's great that there are a few 11-meter beacons, both here AND

I don't think licensing will be the cure. People will always behave
poorly as long as they think that they can get away with it.

What needs to be done, IMHO, is self-policing of the band. It is not
hard to convince CBers that the band is being trashed, but it IS hard
to explain to them that they can do something about it by themselves,
or as a group or CB club. Any CBer can improve the band by simply not
contributing to the crap and trying to convince others to do the same.
Or they could take a more active role by identifying and reporting
those that abuse the band. Either way, the social perception needs to
be changed before things can improve.

>I'm not trying to sound like boobnerd. Things need to be done, but
>Mrs. A. is doing nothing but trolling the NG. Ignore the Bitch!

I think Voobner is doing a fine job with his newsgroup contributions,
if for no other reason than to prompt many CBers into expose their
abusive nature. This is assuming, of course, that we all live in a
civilized society...

I'm listening to it right now. No bootlegging hams heard using SSTV or PSK. All I hear is roger-beeping freebanders yakking on the wrong sideband and giving each other signal reports using phrases like "you're one bar above the yellow".

Is it 4:20 already Tim?

It doesn't stop there. We have run out of exams to take but our gear is
still capable of all sorts of things out of the ham bands (tougher where
there is logic involved) and certainly in modes that violate the Amateur
rules of at least the U.S. I wonder if the Japanese versions stop at 3.9
and 7.1???

This is from the manual of my new Jeep
(My comments in parentheses):

Special design considerations are incorporated into this
vehicle's electronic system to provide immunity to radio
frequency signals. Mobile two-way radio and telephone
equipment must be properly installed by trained person-
nel. The following must be observed during installation.

Power connections should be made directly to the battery
and fused as close to the battery as possible.

(We are all in agreement here.)

Antennas for two-way radios should be mounted on the
roof or the rear area of the vehicle. Care should be used
in mounting antennas with magnet bases. Magnets may
affect the accuracy or operation of the compass on
vehicles so equipped.

(We are all in agreement here.)

The antenna cable should be as short as practical and
routed away from the vehicle wiring when possible. Use
only fully shielded coaxial cable.

(That sure blows holes in the coax length bullshit.)

Carefully match the antenna and cable to the radio to
ensure a low Standing Wave Ratio (SWR).

(We are all in agreement here.)

Mobile radio equipment with output power greater than
normal may require special precautions.

(This means HEAVY cable for your DC requirements!)

All installations should be checked for possible interfer-
ence between the communications equipment and the
vehicle's electronic systems.

(Is that fuel pump noise I hear?)

In case you flunked 3rd grade math, that's 5:40pm PST. Please don't
embarrass yourself further by asking me to convert the US time zones
for you.

> and what type of antenna system are you using?

50ft vertical w/6ft dia top hat, polyester guy-lines, four 8ft
galvanized ground rods pounded in diagonally, remote antenna tuner
(homebrew), RG-8, and grounded at the window. Receiver is a Lafayette
HA600 through an Ameco PT-2 preamp (awesome little unit). Audio output
is to my shop computer (Creative Labs AWE64, Hamview 2.21) through a
homebrew audio processor (5-band parametric EQ, comp/decomp, dual
60/120/240Hz synchronous blanker, noise gate) which I use for lowfer
reception, but works great on HF, too. I also have my comm analyzer in
the van for when things get really noisy. If a signal gets here, I can
either hear it or see it. There was no coded signal on 27.7MHz + or -
500kHz, and there still isn't one as of 6:54pm PST. Is there anything
else you would like to know?

Well, the first two examples are for the benefit of the Harley Davidson
newsgroups, the third for the benefit of the jaguar newsgroup and i'll be
doggoned if I didn't forget to list my Collins KWM-2 and 30L1 amplifier for
the ham radio newsgroup..

Gotta go. I'm taking my North American P-51D Mustang up this evening.. ;-)

sounds like a sweet setup, I will be looking at some gear next weekend
at the Toledo hamfest, I'd like to play with PSK-31 on 6m, as well as
some SSB.

There is one thing I would like to know. Have you ever wondered, why
you wonder, why you wonder why?

It's a mess just like my bench. I have been working on the processor
quite a bit because it might be marketable. But I have always been
interested in playing on 6m. Sounds like a really goofy band. Someday
I might even get my ticket just for that reason.

>the path is open on 10m I'm sure it's open on 11m.

Certainly. But the converse is not necessarily true. 11 meters can be
wide open while 10 meters is totally dead. Even 0.5 MHz can make a big
difference.

Do you really believe that? They why do a number of well known
troublemakers exist on various Ham bands, and have been there for
years? The Amateur community sure has tried hard to get the FCC
to get those stations off the air - without much success.

And how many CBers would even bother to get the license? There are
just too many around - the FCC would not be able to enforce the
requirement - to any significant degree.

And to top it off, license fees would go into the General Fund, not the
FCC so they may well not get any enforcement money.

Go back and check some early Heathkit catalogs, you will see such
transmitters as the DX40 and DX60 which was screen grid modulation
and they called it controlled carrier modulation.

Go back and read some early Heathkit manuals. Controlled-carrier modulation is a power-saving method where the carrier amplitude is varied with the modulation; i.e, power is reduced when it is not needed. CCM allows a higher dissipation on the final than is allowed with vanilla AM. There are several methods to get CCM, only one of which is with screen-grid modulation.

Just a thought but I don't think that is the way to test two antenna's
against each other. My reason saying this is I use to talk to my wife at
work, 20 miles straight shot by highway. I could pull 3 feet ahead and have
her disappear. I could back up again and find her. He could have had the
Antron setting in a dead spot. I think his method of testing should have
involved moving the two antenna's in the other place then comparing. Other
wise its not a true test in my opinion.

If you could arrange it so that the control itself varied at close to an audio rate, in effect powering the final from the modulator or modulating via the control voltage , you would get Taylor Modulation, aka Mongolian Modulation aka Swang. Most Controlled Carrier in the Shortwave bands was a two-step affair as I believe it was with the Heathkits. Just let the final rest between abuse sessions. Has a certain S&M ring to it, doesn't it?

My short forays into Mongolian Modulation consisted of lifting B+ from the bottom of the modulation transformer leaving an rf return intact and powering the whole shooting match from the modulator. Lasted until some OT flamed my pretty pink tushie.

As I understand it, the process with solid state CBs is not a lot different because the process of modulation is essentially the use of a current regulator which can also be used to set carrier level. Leaves a lot of room for the local charlatan or bozo as the case might be to get in and fiddly-fart. Seems that adapting neat terminology for the purpose of 'selling your diagnosis' is part of the game: Fahrquart Finknagle, CB Tech

and Chiropractor; I can see it now.

Swang operates (?) by faking out the receiver AGC more than anything else.
A good SSB receiver with faster AGC will iron it out until one gets damned
tired of listening to it along with the garbanzo from clipped limiters.
Loud and Proud, belch.

>Get Rid Of the amp.
>
>yea right.....this amp gets down...i just love it. i am LOUD...cmon.

Ditch the amp. The amp's not making you loud "& clear," it's making you loud "& distorted." The fact that you're coming through you're stereo speakers is proof that you're radiating unwanted signals. Wanna sound loud?

From Panther Electronics:

"The Original" SP-1A SPEECH PROCESSOR
temporarily out of stock
Enclosed in a Shielded metal case, Big Time audio from a whisper. - Variable Compression Gain, up to 110db Dynamic Range. - Variable input control, reduces background noise. - Processor is completely bypassed when turned off. - Designed to be installed inside a Transceiver, but can be mounted outside. - Power requirements 12 Volts DC, negative ground. - Dimensions 2.5" x 1.75" x 0.875"

Word has it they're back in stock and $44.95 is much more reasonable than the amp. They're legal and they're LOUD! Best of luck to you.

Has another salutory effect, Bert. Raise the average modulation level
from 20% to about 60% and it will sound like real dog shit with clipped
limiters and probably incinerate the amp. A result much to be wished for.
Without the background noise, the sizzle and fry will come thru admirably.

hey asshole, my point in asking the time was that you posted this late in the evening when the sstv activity on 11 meters has died down. its now 6:21 am pacific time. if your anywhere in the central to eastern usa your radio will be full with sstv signals on and around 27.700 usb however a 50 foot vertical isnt exactly ideal for 11 meter reception tuner or not. and sense when does the time on peoples post have to be correct?

yes, the hams that do not enjoy the KW+ needed to work 20 meter sstv are the same ones comming up to 27.700 and having a blast. i started listening to the hf ham bands back before i ever even had a cb around 1990. i'm pretty familiar with what goes on thru out the spectrum. if your hearing more on 14.070 than you are on 27.700 then you must not have good enough conditions to europe. my radio is full blast with slow scan on 700 up until around 3 oclock when i can no longer hear the europeans on the band.

Yeah, Chuckee...you won't be there. That's because all you can do is threaten violence and rape to women and children from behind a keyboard. When a man calls your chump self on it you have to run. You are a fat cowardly piece of human garbage, and you can't do diddley squat to anyone. In an earlier post you said your fatboy loser criminal self would be there. You also said you fear "no one".
I think you lie. You are shaking in your pink tennis shoes over the very prospect of coming face to face with someone you made a physical threat to.
Publicly apologize on the NG and it is all forgiven.

Also, for those who read the post a while back where Chuckee said he had a concealed weapon permit: The fat chump lied. The Michigan State Police provided this information for free. He does not and never did have one.

So, there you are, keyclowns. One of your own. Proven to be a fat chump coward and a liar. A disgrace to amateur radio, a typical keyclown, a putrid hunk of turd with arms and legs. A coward. A threatener of women and children.

COMING UP NEXT:
K8CPA's criminal record!!
I mailed away to the state capital for that. Soon enough I will have it and will post it on a website.

HEY CHUCKEESUKKEE THE SISSY!!! YOUR PINK TENNIS SHOES GET FULLA WEE WE ALL THE SUDDEN????

Chuckeesuckee, threatener of women and children, posted this bit of bravery:

and for the record, I *WILL* be at the toledo hamfest, ready and waiting for *ANY* Bullshit you clowns might wanna start...

I don't fear anything or ANYBODY!

-Chuck K8CPA

THEN THE PUNK POSTED THIS LATER:

...not even gonna be there, I work for a living.

SISSY CHUCKEE!!!! SISSY CHUCKEE!!!!! COWARD CHUCKEE!!! COWARD CHUCKEE!!!!

It is probably several things that contribute to 'rf in the shack'.

1. A total lack of harmonic filtering in either the exciter or amp. Even harmonics are not radiated for beans and odd ones get reflected from loaded antennas. They go somewhere and not always as heat. I am assuming that the exciter has been breathed upon by some tech down at Happy Larry's Truck Stop, Funeral Parlor, Wedding Chapel, and Emporium of CB Delights.

2. Crappy grounding thru a set of mirrors which also tends to make the shields live. Fiberglass bodies have similar problems. Loaded antennas do not decouple worth a shit so that is probably part of the live shield problem as well. This is my candidate. When DC ground meets rf ground all sorts of stupid things happen and I would suspect this is not the only piece of electronic equipment that goes bananas when the X-Farce is fired up. There is a fairly standard fix for this. With co-phased antennas, however, step one is to be sure you have decent grounds at both mirrors; you have not lived until one antenna gets its ground thru the phasing harness from the other; the rf equivalent of 58 Chevy taillite disease.

Whenever I need a good laugh I go to X-Farce's website. They freely admit to all those with eyes to read that they are sheep-shearing on a grand scale.

3528. Who started X-FORCE?

Newsgroup: rec.radio.cb
Date: 2002-03-09 18:45:41 UTC
From: AC <windshield@attbi.com>
Message-ID: <pLsi8.9819$af7.8229@rwcrnsc53>
Source record: 117840

Who started X-Force? We'll that's easy enough....DAN 123 out of KANKAKEE IL. was worked for DAVEMADE amps or DM electronics. He spent about 6mos. working for DAVE. Then he left NJ. and came back to the town of KANKAKEE IL., 50 miles south of Chicago. He got with a guy name CARL......who helped finance the X-Force project. There's a few small other things that need not be said but these amps are basically the same as a DAVEMADE. They look the same inside because they are from the same parts distributor. They are, in my opinion, just as good as DAVEMADE amps. DAN 123 has recently left X-Force, back around early November 2001, and squared up with Carol on finances involving their partnership. This has hurt production, but Carol is still doing a fine job of pump'n these fine comp. amps out.

Hrm.. That's funny. I don't have access to a kilowatt.. I run a measly 100
watts and have absolutely no trouble exchanging PSK QSO's with Europe. SSTV
is no problem either at 100 watts on the HAM bands.
So I honestly don't see where you're coming from, claiming that HAMs run to
11M freeband for their fun with PSK-31 and SSTV; how many watts you push
doesn't matter.. It's all about the ERP.

Model 3-5875A
SSB radio in great shape.Has the two antenna inputs on back.
It comes with the hand mike and I have a Turner Expander 500 desk mike.I
just got to remember where I put the desk mike.The radio is in real good
shape and works great.I just don't use it so I want it out of my way as it
takes up to much desk space for me. I will give you a personal guarrentee on
it.Let me know what you
decide.Thanks Email me.
I am interested in a triband mobile with 6 meters on it also
Make me a reasonable offer on it as I want to move it to a good home.I have
had several people interested,but no solid deal on it yet.

Back when 11 was a ham band it was the only place SSTV was legal.

Tim has this idee fixe that the ham bands are full of multi-kw stations fighting it out when the reality is that most run barefoot and see no particular need for heat. Gung-ho DXers and contesters are the exceptions but you knew the price of admission when you bought the ticket.

And along the line of 'get 10db or you are playing with yourself' most run in the 100-200 watt range which drives a 1500 PEP amp admirably if not excessively when and if you decide to spend the rasbucknicks on what is really a low-priority project for the marginal contact -- about 12th on an 8-item list for building a decent station.

But I suspect those of us who do it can talk till LA sinks beneath the waves and not convince Tim. He is a fiend for 'equivalency': moral in that if anyone does anything stupid he can too, and technical in that someone limited to garbage freqs is equivalent to someone who spent the time and effort (not all that much) to obtain the license to do it right.

In short, Craig, you're pissing up a rope.

I tried something similar by running an AGC line to the clamping tube.
Didn't work too well -- no matter how small I made the LP, the AGC
signal couldn't keep up with the modulation. The result was my voice
sounding like a snare drum.

>full with sstv signals on and around 27.700 usb

At 11:45am PST today I managed to pick up a couple PACTOR signals
(27.685, 27.430), but no SSTV, and a whole lot more noise. But if, as
you say, the SSTV activity dies down in the evening, are you saying
these hams are totally ignorant of daytime propogation? Better yet,
instead of criticizing my equipment, timing and findings, why don't
you substantiate your claim that there is more SSTV on 27.7MHz than
all the HF ham bands?

> however a 50 foot vertical
>isnt exactly ideal for 11 meter reception tuner or not.

It's much more sensitive on the band than my coaxial dipole or my A99.
And while my Lafayette isn't as sensitive as my S-40, it still does a
hell of a lot better than any CB I have ever used. Also, I have an
advantage in my location: I'm somewhat shielded from ground waves from
the East by the Rockies, and from coastal signals from the West by the
Cascades. My best propogation comes from the direction of Salt Lake
City and Southern Cal all the way down to Mexico, which I can pick up
clear as day. And I don't have to deal with all the background noise I
heard last year after I crossed over the continental divide (how can
anyone put up with all that noise?). Now why don't the hams over here
use the freeloader freqs for SSTV like they do in Texas? Is it just a
regional phenom?

> and sense when does the
>time on peoples post have to be correct?

Hmmm... At 5:07pm PST you wrote:
>hey spark, nothings stopping you from spinning the old vfo to 27.700 and
>hearing for yourself.

At 5:40pm PST I replied:
>Nothing on 27.7MHz, but I just found eight SSTV signals on 20m. Try
>again, Tim.

At 6:08pm PST you asked:
>what time was this posted and what type of antenna system are you using?

So I guess the time of my post must have been between your posts 5:07pm and 6:08pm PST. So are you now going to claim that it is my responsibility to make sure the clock in your trailer is set correctly?

Hello!

For those that could "give me a hand" promoting this website, I
would like to give you this information.

The official name of the site is:
SSTVCB Forum and Mailing list

The URL is:
http://groups.yahoo.com/group/SSTVCB/

The description of this site is:
An international forum and mailing list dedicated to the advancement
and development of SSTV in the 27mhz band. Come and join us to
discuss and share common interests and information in this
fascinating digital mode of the 11 meters (CB) band.. See and be
seen!

SSTVCB Banner URL:
http://www.picturelist.com/images/alfa011/SSTVCB%20bannerFINAL.jpg

Hope that with this information you can promote the SSTVCB list.

If not, please contact me off list.

Regards..
Almir 11RK011

yes thats normal for the 5010 i have one and its the same way. But if you want to go to the other channels you have to use a different band. its not like the 2950.

The Australian CB community appears to be at the forefront of PSK-31 on 11 meters. I find this sort of odd as the Australian counterpart of the FCC is reputedly very rigorous in their enforcement efforts. I believe 27.7000Mhz or thereabouts is correct. Take care and 73.

Antennas do not cause TVI except under two conditions:

1) it puts a lobe into your neighbor's house. This is one place where the
ground plane is an improvement on endfeds or vertical dipoles.

2. Something gets corroded and plays diode.

http://mywebpages.comcast.net/mnowlen/heath-gw-21-top.jpg

Four Heathkit GW-21 CB Walkie-Talkies from the 1960s. I had a similar set as a kid. I got these with the inention of restoing them but just don't have the time. Two look to be complete and fairly clean with all controls and whip antennas. The other 2 can be used for replacement or spare parts. Two sets of snap-on leather straps included. Someone with the time should be able to make a good pair. Sold as-is.

$40 for all four
Plus actual shipping charges
Send Zip code for shipping costs

Please email if interested,

Mike

Tend to agree. There is no really good reason for the Amateur community
to care one way or the other unless a beacon is needed into a Pacific
guano pile. And the Aussies have a lot more reason to care than we do.

> threaten violence and rape to women and children from behind a
> keyboard.

Number one. Did *ANYONE* in here, see ANYTHING posted by me, threatening to rape dougie's daughter or wife? With Chuck K8CPA in the headers???? I saw something a LONG time ago, posted by some troll to you in this NG, something also to do with Riley Hollingsworth as well, I thought it was quite funny. Figured some troll was having a bit of fun, I also noticed the troll was on AT&T Worldnet, as I was at the time too... and I kinda thought in the back of my mind, Whoa boy, I'm gonna be blamed for it, and sure enough I was. but, I kept to myself about it. you say, you traced the IP address to me, Bullshit! Dial-up Modems are assigned static IP addresses, and it came from a dial up connection in the Detroit area, Big FUCKING deal! you know how many HAM'S and or CB'ers in Detroit and surrounding area there area? Thousands! Someone was having the time of thier lives at YOUR expense dougie, and you friggin fell for it, hook line and fucking sinker! ....and of course, *I* was blamed for the whole thing. like I figured I would be. In fact, I *Think* I may know who it was.... not 100% for sure, but do YOU honestly think I am going to tell your dumb ass who I *think* it might be, HELL NO! for one, becuase I quite honestly could be wrong and for two, I personally think your an moronic, pencel-necked , no-code, CB dumb ass, wanna be Ham! and I'm glad the guy PISSED YOU OFF!

>When a man calls your chump self on it you have to run.

Shit boy, from what I hear, I could kick your fucking ass with ONE hand tied behind my back! and remember, I have friends too and what I cannot handle, they could and would be more than happy too help out... ever heard of the Iron Coffins Dougie????????? They make the fucking Hell's angels look like fucking boy scouts!

>You
> are a fat cowardly piece of human garbage, and you can't do diddley
> squat to anyone. >

Neither Can you.

hahahahahahahahahahaha.....TOO FUNNY!

You are so DUMB!

You forget, Dougie, I know where 504 Euclid Ave is in Toledo. I might just come right to your fucking house tonight bitch and drag you out in the fucking street and kick your ass... wanna try me???

Go for it!

> Publicly apologize on the NG and it is all forgiven.
>

Like I said, Dougie, you ain't smart enough or bad enough to get *ANYTHING* out of this mother fucker...

Ahhh, the resident childish scumbag and NWA wanna be answers with an
insult. Face the truth, piglet boy. You ain't and won't ever be
anything but a fatmouth jackass yerself. You was cold busted, tnom.
reading back over the posts that led up to Chuckeesuckee making his
threats, I see N8 said it well, "plenty of hospitality, whatever kind
you may need."
I am sure your idea of hospitality is not to bitch too much when your
drunk and
stoned ghetto trash fellow fools puke on the floor of the condemned
pesthole you call home.
DimDweebo, it is the sentence of the Supreme Court of Anti-Keyclown
Land that you serve a period of 10 days singing "Because I Got High".
It is further ordered that you stop using all illegal drugs, so that
that fog shrouded lump of wormy pus you refer to as your mind may form
some sort of rational thought.
Your superiors have judged you. Case closed.

Sparky, narrow band modes do not seem to attract much attention here. I'm waiting for fstv to appear, along with discones, biconicals, and log-periodic dipoles. Hey, with a 6 MHz bandwidth, what length coax would you feed that puppy with (or do you fray the braid over the last foot or so)?

Hello!

A new website for SSTV enthusiasts in the CB band is available!

The only international mailing list exclusively to SSTV transmissions
in the 11 metres band (CB / 27Mhz).

http://groups.yahoo.com/group/SSTVCB/

The SSTVCB Forum and mailing list devoted exclusively to the
advancement and
development of this interesting mode in the 11 meter band.

In this forum / mailing list, we want to share and discuss all
subjects pertaining to this fascinating mode! Radios, computers, sound
cards, TNC's Modem's, equipment, radios, software, stations, photos..
are just a brief sample of what we could share among ourselves!

If you cannot, or are not interested (what a shame! :-( )please
forward this invitation to some one who might!

Regards!
Almir

3564. Re: emperor 5010

Newsgroup: rec.radio.cb

Source record: 117926

Part of what Richard is trying to tell you is that if you are not careful, by adding "channels"
to the radio, you are placing yourself in the "gunsights" of the licensed hams up on 10 meters.
That is, if your mods happen to spread out that wide. Yes, there are CBers, especially truckers, that have been doing this. And some have succeeded in getting warning letters from FCC over it. If the radio works on the existing 40 channels, you'd do well to leave it along, or ask the tech just exactly what DOES the radio do. We aren't trying to "diss" your radio, or criticize you. Just trying to help you keep from getting trouble with something you
aren't sure of.

Then why do you say screen grid modulation is not controlled carrier modulation.? Seems you just contradicted yourself. The DX35, DX40, and DX60 all held the carrier at a low level then modulated the screen to increase the carrier (screen grid modulation) and Heath called it controlled carrier modulation.

Wait and see sissy. That threat you made has some
people pretty riled up.
You might just taste some sorrow if you make it to
Toledo fest.
We all know what an illegal fuck face you are Chuckie.
Wait and see. Yer time is coming. Asshole.

I believe it too. I bet this is a true account.

See you in Toledo,Chuckie.

N8 is going to ask you if you want to apolgize personally to
his
family for threateneing them with violence. Since his wife and both
kids
will be there,i think it might be a good idea, since we KNOW you are
to
sissified to do ANYTHING but hide behind a keyboard and threaten
people.

MY BIO!!!!!

Cocksucker Peckerhead. Asswipe - K8CPA

Okay, this is the place where I tell you how I came to know how
fucked
up I am.... and all the personal information about me. I will try and
answer all the questions:

Date of Birth: June 28, 1972

Place of Birth: Detroit, Michigan

Religious Information: Well, first off, I am NOT heterosexual! I am
a
faggot! I accepted penises as my personal Lord in 1980. I was all of
10
Years old, I knew exactly what I was doing, I knew that if I didn't
get
cock in my mouth, I would not See the Lord in the rapture of it's jizz
pulsing. I have been butt pumped nightly for 12 Years. Although, I was
"Backslidden" for about 6 of those years, while screwing female
barnyard
animals. I am now back serving my Lord penis. I would like to Thank
the
Rev. Jack Hizhogoff of Detroit Gayboy Outreach (Web at:
http://www.dgo.fag)
for standing in the gap and slapping his manly dick up my fat faggot
ass,
and for a playroom where people like me, who were burned by
chickenhawks
with syphylitic dicks and fellow fags in general, could come and give
their
hearts back to the Lord penis. My only regret is that Rev Hizhogoff
had to
start pushing his manly dick in my fat faggot ass to the point where I

could not bear to bend over anymore, and!
I returned to my favorite pastime, cocksucking in the men's room of
the
Detroit bus station.

"Burned" by the syphylitic cocks in my mouth and asshole?: Yep,
Sure
was.... I was... like I said before, I was sucking when I was 10,
(around
1980), I was originally sucking just anyone, especially born again
Christians and other mentally fucked up Baptist types like me. I loved
those guys when they'd tell me to tongue their assholes. Condoms were
a BIG
no-no.... and I believed it!

Speed ahead 4 years. in 1984, The Baptist Church I went to had a
bit of
a controversy, The Pastor had resigned because he was caught bobbing
on my
young fat faggot pee pee, and things there were in a state of chaos,
and my
mom did not want to suffer having to put up with my faggot punk boy
ass at
home. She enrolled me into the Detroit Institute for Hopless Gayboy
Fatass
Chumps. I started attending and believe me, going to a Full-TILT anal
only
gayboy school. after attending one with a stated preference for
teaching
Hopless Gayboy Fatass Chumps to mainly suck dick, was a MAJOR SHOCK to
my
system! But one thing kept me from leaving the place, was the fact
that
these people seemed to really love the Lord Penis. and there was this
one
guy, named Robert Snyder, Who played the drums, like John Bonham,
(from Led
Zeppelin) and we got along great.... (Not to mention he would let me
drink
his jizz on the sly. That was HOT! least *I* thought so! Hey! I was 14
years old, and my hormo!
nes were at full TILT! So SUE ME!) (By the way, Snyder is now married
to
MoparHolic and living in Ohio. I'm very happy for him.

Anyhow... After being there for about a year. I started being
interestin
in playing drums for them, as I was a drummer, from a young age... and
I
wanted to use my talent for the Lord Penis. Well, I eventually got the
nerve to ask if I could play for them, and they said sure, as long as

I
would give ‘em all head before each show! AWESOME!!!... My first
time
playing for Detroit Institute for Hopeless Gayboy Fatass Chumps was a
nightmare! I was scared, I totally forgot how to play because I was
violently burbing up the sprem I had sucked down before the show.! I
was
THAT scared! Anyhow... speed ahead to age 19... I was changing as a
person,
things were changing at Detroit Institute for Hopeless Gayboy Fatass
Chumps, as well. and a bit of a disagreement rose up between me and
Snyder.
I wanted to suck their cocks the night before the show instead of
immediately prior to it. They said they needed the rush in order to
play
better, and I was asked to step down from the music mi!
nistry. Needless to say I was crushed. and very upset at Snyder In
fact. I
didn't think I'd ever be able to forgive him for that... Anyhow... I
entered into what I called "My Dark Years" from age 19-26... Drugs,
Drinking, eating 7 meals a day of Burger king, Dominos Pizza and Taco
Bell
in order to make myself an even bigger Hopeless Gayboy Fatass
Chump.... and
when I found out that Snyder had turned heterosexual, I really went
off the
deep end... until...

MY MOMENT OF CLARITY

Well, when I was around 26, I was totally burned out on the Dominos
Pizza"... I was just sick and tired of being sick and tired... I
needed
cocks rammed up my Hopeless Gayboy Fatass Chump poop chute and I
needed it
BADLY!!! the people I was upset at were gone from Detroit Institute
for
Hopeless Gayboy Fatass Chumps. I was not getting any older... and I
was
ready to stop running from the Lord penis. But I had issues to resolve
in
my life... How could just Go back to the fags that had only "screwed"
me
and wouldn’t let me suck cocks in the first place? I still felt like
I'd
been wronged! But I had the Clarity moment of a lifetime... This
thought
crossed my mind...

"I was a FAGASS PUNKBOY MOTHERFUCKER BEFORE I came to the Detroit
Institute for Hopeless Gayboy Fatass Chumps

Why am I allowing something that happened 7 years ago, keep me from serving my God, the Penis?????????

My Return to total Fagassedness!

Well, I was 26 years old... I was wanting to come back full time to Lord
Penis. But I wasn't going back to Detroit Institute for Hopeless Gayboy
Fatass Chumps (at least not at that time!!!) I had heard about a church
called DGW (short for Detroit Gayboy Outreach) and I'd heard in the past
that it was a nice place... So..... I wanted to be where the Holy
Spirit of the Lord Penis was... and there I was... I came to the church on
Ann Arbor Trail... my first experience there was a interesting one, I came
in the parking lot... puffing on a 7 year old kids cock, (in my years of
being Backslidden, I picked up a nasty 2 child a day, sucking habit...) I
finished my child, and went in, and right away I heard SCREAMING in my
ear... "what are you doing here???" "these are the people that Screwed you,
but would not let you suck dicks!" act..... and when the song service
started, the Holy Spirit of Lord Penis fell, and I became very
uncomfortable, to the point when I had to lea!
ve! and I did!, I remember a usher, running after me and saying where are
you going??? I remember looking back at him and saying... "I can't handle
this SHIT I got to get out of here!" and I left.... Well, that week... I
sort of prepared myself for service to mensa dicks next week, I took my
Book, Gay Sex For Dummies to work. (I worked midnights as a Security Guard,
so I could walk around the ghetto apartment complex I patrolled and peek in
windows at sleeping little boys. and I had lots of time to masturbate...)
My mother realized I was fantasizing about kids nuts.... I found myself
reading the Word, and Praying for a big hairy chested man to suck off.. by
Sunday, I knew I was ready to come back... Went back that Sunday.... they
had a Illustrated Sermon on fellatio with pictures from several fag
magazines, it was great, and needless to say, my Hard cock, Melted in the

presence of the Lord Penis. and I knew that I wanted to come home.

I thank the Lord Penis for his Love, That takes us whacked out people as
we are, and makes us his Servants....

Where am I now... : Currently Attending Adult classes at The Detroit
Institute for Hopeless Gayboy Fatass Chumps.

HAM RADIO?!?!?!?!?!?!?I BETRAY IT AND WORSHIP ILLEGAL FAGGOT KEYCLOWNS
BECAUSE THEY LIKE SUCKING COCK AS MUCH AS I DO!!!!

I was, I guess you could say, Born into the CB FAGGOT Hobby... My
Father, was a Dyed in the wool CB FAG... I even had a stint in the CB radio
hobby as well... Anyhow, one year (I think I was around 8 Years old...) my
parents and I went to have sex with my Grandfather's Sister and her German
Shepherd, in Conway, Ark, which is the world capital of CB FAGGOTS. To say
the least, was totally impressed with the FAGGOT CB Hobby, because it
satisfied my craving to run my faggot mouth constantly AND to suck
cocks!!!. and for years I did nothing about it, just sucking dicks
constantly and that linear tuning on those tube type ILLEGAL FAGGOT
KEYCLOWN amplifiers was just too hard to learn. Speed Ahead to age 14, a
friend of mine, Joseph Hampton (Ham call sign N8ExtremeCockNosher-but ALSO
a secret ILLEGAL FAGGOT KEYCLOWN) who lived across the street from me, and
also was interested in getting his dick polished as well.. Well, we had
some gay sex together... (you see this was when you!
had to be secretive about your gayness! I was KB8HHZ (hugely horny for
zebra!) and Joe was KB8HGL (Hungry Gonad licker!)... I believe me and Joe
were originally licensed in 1989....

On April of 2000. The FCC Restructured it's licenses... and I paid a
renegade VE 50 bucks and Received my General Class Ticket... I often
masturbate while thinking of linears for ILLEGAL FAGGOT KEYCLOWNS. And
really think Riley is mean. Maybe if I sucked his dick he would not be
after traitor scumbag shithunk fagboys like me.

My Call? Is a Vanity call that I paid for, it is my initials! Because as
a Hopeless Gayboy Fatass Chump, I need something like that for my

ego.

so there you go!

I hope this answers everything you wanted to know about me!

I love sucking cock! Let me know when you are in the Detroit
area!

Subject: xforce info
To: aaronvoobner@my-deja.com
Attachments: msg2.html

Aaron this info is 100% guaranteed to be true. i know the owner personally
and he is a slug who started the business using money he collected from
disability he used to drive a truck. Since he has made a fortune of the
amplifier business he is thinking of getting out the next year or so i guess
because of the heat. I am sure he avoided paying any type of taxes the past 3
years or so that he has been in business. He got his start with a guy named
Dan Frechette who now lives in Kankakee Illinois Dan worked for a guy in NJ
named Dave well since then Dan better known as "123" took davemades design
of amps, customers, method of operation, contacts etc and started the xforce
line with the info he jacked from dave while he worked there So now he teams
up with the ex- truck driver named ...Carl Curatola the current Owner of
Xforce . he is located at 630 West Bolles Ave West Chicago Illinois.. his e
mail is xforce151@aol.com he has done much business with exportradios.com
and exportsrus whom was just popped by the FCC. The funny part is that Dan
123 screwed davemade when he went out there to work for him for about 6
months he left dave with all daves design info etc and went back to Illinois
he then got togther with Carl and now they used this hijacked info to
duplictae davemaeds amp which has been pretty much declared the best amp of
the keyclown crowd. The funny part is that the duo of Dan and Carl parted
ways when carl became greedy I hear and wanted all the money. Since he got
what he wanted out of Dan the guy who had the Davemade design info he didnt

need him any longer so Dan left and started another amp to compete with xforce but that didnt last long... To my knowledge the guy dave doesnt sell his amps any longer since he got screwed over buy Dan and another hack has picked up the name and is selling them. But there you have it in a nutshell
Xforce Owner is
Carl Curratola
630 Bolles Ave
West Chicago Illinois

Thanks Dick,

I didn't think so. I assume the Antron 99 is the "vertical dipole" while the IMAX-2000 falls into the "endfed" category.

Hehehe!

ChuckeeSuckeee...This aint N8, you fool.

Your Post was IP traced long ago. AT&T bounced you for it. Quit lying. We know.

You may just have to ask your buddies the "Iron Coffins" if they remember any exciting activity on Sherman St. in Toledo back in the 70's. Tell them they would be facing the same bunch.

Show up at the Toledo Hamfest, sonny. That's the bottom line. You are a hopeless chump and a coward. Now by denying the post you are a liar. Of course, we KNEW that when you made the post about the CCW permit. Come on Chuckeesuckee...admit it...you are a liar, a coward, a disgrace to amateur radio, and a mentally addled turdhunk.

Since you have to be on the early shift at Arby's and make the breakfast rolls, I am sure you won't be at the fest.

What I suggest you do is find ole N8 at a fest sometime and jump him. It is the only way you will have a chance.

You know you made the threats. You know you lie about it now. Sissy boy.

1. Thier is an incorrect spelling. Their is correct. You are welcome.

2. I suggest you contact the cable company and complain. That's all you can do, except make threats of violence to women, children and pets.

3. Do you see any threats? You amuse me Chuckee...whining like this.

4. Why don't you tell us all about the CCW permit. You know, the one you lied and said you have.

5. Your implied threat of having a bike gang back you up against a person whose family you threatened with violence shows what a fat sissy coward you are.

6. I'm done now. Hope to see your face sometime. Sissy boy.

I think this is the reason the Antron has a rep in CB circles as a TVI machine although I have never heard a bad word on it from Amateurs using it on 10 or 12 meters. I don't know the IMAX from bo-diddly except stealing names from other gizmos sort of disturbs my artistic sense. If you ever saw one of the variants of the Ringo you saw a true end-fed half wave with that ring as a matching gizmo. You either swore by or at Ringos.

3586. ICECOLD REPOST OF VOLTS VS. AMPS FOR MOBILE OPERATION

Newsgroup: rec.radio.cb
Date: 2002-03-10 06:25:01 UTC
From: icecoldnyc@aol.comICECOLD
Message-ID: <20020310012501.09994.00000400@mb-fo.aol.com>
Source record: 117848

I wanted to repost an old post of mine to see if we can re-start a dialog on the issue of AMPS vs VOLTS....

I saw this post on the net and thought that it would be informative for all those with questions concerning volts versus amps. Needing to get the most out of your amplifier. I did not write this post!!!
ICECOLDNYC

****
****

Following up on my last reply- Good info to all!!
Wednesday, 05-Aug-98 09:35:23

Message:
208.236.24.88 writes:

OKAy- Part of what you had to say is correct.... volts x amps = watts. In the electronics world utilising Ohm's Law... E=IxR (volts = current x resistance) and the power formula of P=IxE; we can conjugate the two and derive the formulas P=(IxIxR) and P=(ExE)/R which is where my formulas came from. And yes, it is under optimal and very unreal conditions, not what actually happens. The example given was to merely show comparison as to what more volts will do to an amp. A lot depends on amplifier internal impedance matchings and on antenna matching, SWR, loading, etc.... Another good view was an old amp of mine (8-pil) which at a charging voltage of 13.9 volts on my vehicle, I saw 1800W or so with a 2-pil driver. Increasing to 20.2V yielded 3200W with no change in SWR (which will lie to a wattmeter and give a false indication of wattage if SWR is high). So a higher voltage will yield more watts, but if you plug all the numbers in as in my example, you will see that the current drawn also increases dramatically to yield the watts. Please realize that at 13.9 volts charging, I can have a bizillion amps available, but I would not see an increase in watts unless I had been in comparison with a charging system which at 13.9V and the available current was lacking. That never was a problem in my vehicle. Also if I had increased the volts, but I did not increase the available current (ie, bumped my 100A alternator volts up to 20V, but did not add additional batteries), I would see an increase in watts, but I definitely would have never seen such a dramatic increase in power and I probably would have blown my alternator.

Yes, Amps are important, but so is the voltage, they go hand-in-hand and being low on one or the other will be detrimental to power output.

I also know some amps, depending on tuning and loading, will draw significantly more or less amps at the same voltage than another amp of a similar

configuration and yield similar watts. Go figure...throws all the simple mathmatics out and now we have to get into some quantum physics and calculus. Yuck. Let's keep it simple!.

I hope this clarifies any views on volts and amps. Ask some of the BIG Boys out there, ask them what the secrets of yielding the BIG watts are out of a small box...

Another thing...I wouldn't run my 8-pil at 20+Volts with a lot of drive for a long period of time. Yes you would see the box do some incredible watts for a short period of time. There is no way (that I know of) to cool transistors fast enough to maintain the high watts for a long period of time.

Also remember that most "commercial" boxes (Texas Star, Palomar, etc...) without any modifications will NOT handle more than 16V or so Maximum!!!!

God bless all!!!

He who knows not and knows not he knows not,is a fool Shun him
He who knows not and knows he knows not,is simple Teach him
He who knows and knows not he knows,is asleep Awaken him
He who knows and knows that he knows,is wise Follow him

He said it because they are not necessarily identical. In other words, you can have screen grid modulation without CCM. You can have CCM without control grid modulation.

Maybe it is making the person distorted. Neither you or I can judge that,
without testing the signal.

Nor does getting into the stereo speakers mean that unwanted signals are
being radiated. All it means is that a signal is getting into the sound
system, one way or another.

http://www.telegraph.co.uk/news/main.jhtml?xml=/news/2002/03/07/wspy07.xml&sShee
t=/news/2002/03/07/ixworld.html

Like the "hippie" of the '60s, the white nigger is a complete
consumer package -- the expensive-to-buy, cheap-to-make sweatshop
clothes from the perennial Jewish "rag trade," as Jews call it, the
"music" and gang movies that pour billions of White dollars into
outstretched Jewish hands. It's called "disposable income" for a
reason -- money that Whites are throwing away. Let's not forget the
made-in-Israel, smuggled-by-Hasids "Ecstasy" pills made to dissolve
individuals into one great big sweating touchy-feely, aracial mass,
twitching and jumping on the floor of a Jew-owned night club as the
silly lights flash and the cash register rings frantically. Five
dollars for a small bottle of water! Such a business....!! Jews need
rakes to pull in your money, White boy.

With the clothing and the noise and the stupid behavior come the
stupid attitudes, the self-destructiveness and self-hatred, the
Jewish poison spooned down us. Concidentally, I looked up from
writing this to see a Frontline special on PBS titled The Merchants
of Cool about precisely this subject.

Typically, a program such as this can go on for hours showing us one
hooked nose after another, subjecting us to one abrasive Jewish voice
after another directing, inventing, promoting, selling, researching
-- and never once use the word "Jew."

The Merchants of Cool showed us how the current niggerization of
youth, the coarsening, the dumbing-down, the filth, violence, and sex
are all products of the same mega-Jewish "entertainment"

corporations. One character on Murray Rothstein's ("Sumner Redstone") MTV is "The Mook," Tom Green, who specializes in idiotic behavior, vomiting on cue, striking himself in the crotch with a stick, waving his rear end back and forth while walking on a table. In one scene, "Mook" goes "poo diving." He dons flippers, face mask, and snorkel, and leaps into achurning brown tank of sewage at a treatment plant.

One finds oneself cheering on the possibility of hepatitis, TB, meningitis, flesh-eating staph. Go, microbes!

The show whined that the poor teens are "trying to invent their own culture, all to themselves," but that the "greedy corporations" keep taking it from them and "commercializing" it. In the first place, children have never created and run their own culture. In healthy, racially homogeneous nation-states, there can be continuity, with several generations living under one roof and children learning from parents and grandparents. Normal human life flows as a continuum; it does not progress in a series of Jew-driven commercial jerks with new clothes, new "music," new "causes" every ten years. Old and young are not each other's enemies.

Secondly, there is no low point beyond which Jews will not go. The program showed how teens have become louder and louder, more and more vulgar and obscene, with "rage rock," desparately trying to swear loud enough and act repellent enough and paint themselves weirdly enough that "society will leave them alone." It showed how the loudest and filthiest of teen bands one day...was appearing on MTV the next.

Kids, it isn't possible. You can't out-dirty a Jew. No matter what you do, Jews will eagerly scoop up your filth, package it, and sell it back to you.

While White teens watch 15 hours or more of "professional wrestling" every week, lumbering around wearing convict headrags, biker boots, and carrying baseball bats wrapped in barbed wire and injuring each other in after-school fights based on the contrived nonsense they see on TV, Jewish kids are studying like mad to ace their SATs to ensure that they end up hiring these Whites to mop floors in a few years. Get ready to serve a sharp little Jewish boss, White boy -- if he'll have you at all. The Mexicans and other aliens Jews are flooding our country with work a lot cheaper than you do.

Hip-Hop White Boy, you're a hip-hop sucker. While you slide down someone's expensive railing on your skateboard (that you bought from a Jew) and then split your head open on the cement, and stagger around saying "Oh wow, oh wow," Jews are banding together to take over entire towns, stealing money and fiddling with the census figures so that taxpayers will support segregated Hebrew schools where Jewish kids can learn WITHOUT HAVING TO SIT NEXT TO IDIOTS LIKE YOU.

You can't out-dirty a Jew -- but you can outsmart him. If you'll listen to the older White men the Jews are trying so hard to make you hate, we'll tell you how to do it. We're not like Jews -- we have nothing to sell you. We will give you a future, though.

Want to have your own culture? Then do so. Reject the Jew, the criminal nigger, the alien.

White culture is the greatest culture the world has ever known. Proof? Look at that stupid TV (that Whites invented). LOOK at it. The whole world is wearing blue jeans and T-shirts and sneakers and ball caps and carrying handy little backpacks, or wearing business suits and shirts and ties. Everyone wants a car and an air conditioner and a refrigerator and a computer...all White inventions of the last few centuries in the greatest upsurge of technological innovation ever seen. The whole world wants to have what we've built; all the blacks and Chinese and Mexicans put together did not do, could not do in 10,000 years what we've done in 100.

Don't buy expensive, silly clothes made for pennies in Jew-run foreign sweatshops. Don't buy music, support causes, or watch programs that teach you to hate yourself, your family, and your race. If you want to rebel, REBEL AGAINST THE JEW WHO CONTROLS YOU, right down to the clothes on your back, everything you're taught in school, and everything you're allowed to see, read, hear, and buy.

Many of your parents are also victims of what Jews have done to our society; they are often as confused as you are, as full of self-hate -- as the rebel, you may have to lead the way in your family. Do everything that Jews don't want you to do! Stay away from booze, drugs, and promiscuous sex. Dress simply, be kind and respectful. "Please," "Thank you," and "I'm sorry" do not mean weakness, and they will be repaid many times over. Did a Jew ever tell you to cultivate spirituality in yourself, to learn the value of cleanliness, quiet, and order? Learn to use tools, to live and find your way in the outdoors, to fix and make and grow things; let the fools run to the mall and spend all their money on nigger CDs and makeup and baggy clothes. If your parents won't or can't teach you these things, get books and teach yourself and your friends.

Jews aren't cool. They're parasites, manipulators, speculators, middlemen who live by buying and selling the work of others. We don't need them for anything. Niggers aren't cool either. Niggers know how to break bottles and make gang signs and pee in other people's hallways. I'm a middle-aged White guy. I'm cool.

I don't smoke. I don't drink. I don't do drugs. I'm normal, not queer, and I don't screw around. I don't gamble. I don't hang around dangerous places with stupid people. I don't waste money on Jew-pushed, foreign-made consumer junk. That's why I don't have cancer or cirrhosis or AIDS or huge emergency room bills. I don't have lawyers after me for child support and collection agencies after me for

unpaid bills and loan sharks after me for gambling debts and drug dealers ringing my bell wanting their money.

I don't have a hangover or a system full of toxic, made-from-God-knows-what drug residue to get rid of. I exercise, walk, run, ride bikes. In the winter, too. Niggers laugh at me -- from heated buses. Can't catch me. When they're doubled over gasping and puking up McDonald's and KFC, I'm fine, good for another twenty miles. I don't eat that stuff. When niggers are crying about cold, bundled up in their huge down "Starter jackets," I'm wearing shorts. White people are hard, fast, strong, tough, resilient. Don't let TV-Jews tell you any different or put you down. Niggers just play basketball -- Whites invented it.

I don't sit and watch other people do things on TV. I do things for myself. I know how to put a computer together and how to sleep outside, how to build a fallout shelter, how to kill and cook a rabbit. I can make a camera from scratch and take pictures with it and develop the pictures. I can not only take the pictures, but I can write and edit the whole magazine and run the printing press. I can build radio equipment. I can run almost anything in a machine shop, and make almost any kind of tool, often from discarded junk. I know how to use microscopes and Geiger counters and welding torches. As SF writer Heinlein said, "Specialization is for insects."

I am so cool that I screw caps back on fire hydrants and pick up trash from the street and call to get traffic lights fixed. I am an asset to everyone around me, and I have improved every place I've ever lived, just by being myself and doing the things that responsible White men do. What did your nigger "friends" ever do for you except borrow stuff and not return it, steal money from your parents' dresser the second they got into your house, and try to screw your sister?

I am one of the people who helps to design, build, and maintain our civilization. I'm way cooler than any finger-popping nigger ever was, and I know it. That's why I'm so quiet you hardly know I'm around. I don't need a loud car stereo or a ring in my nose -- I've got a life. You don't see me down on the corner, clutching at my genitals, shouting obscenities, and beating up parking meters. I'm at work, or at home, listening to classical music and trying to help my race by writing material like this, to try to make Whites feel good about themselves and to get them to spit up some of the Jew-poison we're soaked in day and night.

You can have a life too. Start NOW to make yourself a future; if you're going to "collect" anything, make it gold and silver coins, firearms, items of intrinsic value, not some Jew swindler's worthless baseball cards and phony autographed bats. Don't laugh at "materialism;" by the time you're 45, you'll want some money in the bank and a house in a quiet, safe area very badly. Don't throw it away on dope, on stupid clothes, at the "raves," or in living high in

some "hot area." Trust me on this.

Get a grip on your world; if you understand the past and present, you'll have an easier time shaping a future. Turn off the TV -- it is poison. Study some history -- just the recent history of America. Start with the last 50 years or so, and work back. This country has changed for the worse so much in the last few decades that it's almost unbelievable. Seek out and study census figures showing the immense racial changes that have been engineered by Jews.

Save and cherish your family history, the old photos and scrapbooks. Old people are a priceless resource. Talk to them. They can tell you what was across the street before that ugly mall was put in, how people used to live, where and how they worked. You will always be glad that you spent time with them, and you'll always remember the things they can tell you; fifty hours or fifty years of MTV contain no value at all and will be forgotten in no time. Look at maps and aerial photos on the Web, and historical pages. Try to find old books, magazines, and newspapers that will show you more accurately what American society used to be like before MTV. Many libraries have old magazines like Good Housekeeping and Popular Science on microfilm. Use these resources to challenge the crap, the Jewish-controlled lies you're being taught in school these days.

What was really wrong with The Merchants of Cool? The premise of the program was that we should calmly sit down with Jews and discuss their unparallelled destruction of White culture as the destruction continues. What was right about the show? It proved, yet again, why Jews have no place in civilized society. Thanks, PBS, for the pictures of underage girls gyrating in whipped-cream bikinis, the images of idiots vomiting on themselves and swimming in excrement, that leave no doubt as to what must be done for White culture to survive.

It's not fair to you kids, but there's a war on. We're sorry it's gotten this far, but we're working against a very powerful enemy; the Jew makes up for his tiny numbers with his tenacity and his racial cohesiveness. Jews stick together like glue, and Whites must learn to do the same.

Don't be a white nigger. Just Say No -- To Jews.

Oh, so, now you go from wanting to hurt me to wanting to be a teacher, sounds like a change in tone to me.

> 2. I suggest you contact the cable company and complain. That's all you can do,
> except make threats of violence to women, children and pets.
>

Well, the fact is, *I* have *YOUR* IP address and I traced it to your location in Toledo, and I E-mailed the system admin at *YOUR* ISP with all the threats of personal harm to myself via e-mail, which BTW could have you brought up on Federal Charges. So,we'll see who has the last laugh here and BTW, if the Toledo branch of the FBI does call me and ask if I want to press charges, I will be saying yes.

> 3. Do you see any threats? You amuse me Chuckee...whining like this.
>

Well, In fact, I recieved not 1, but 2 direct threats from a person on a yahoo account... that was posted from *YOUR* IP address 205.162.217.145 which BTW for those concerned is the "Buckeye-express" cable modem service in Toledo, Ohio. and that's where dougie lives... give it up dougie, you're caught this time, and when I'm done with you, you're gonna wish you'd never brought this old stuff back up.

> 4. Why don't you tell us all about the CCW permit. You know, the one you lied
> and said you have.
>

Like I said, Who said it was registered. and fact is asshole, I don't need a gun, I'll take you out with my bare hands!

> 5. Your implied threat of having a bike gang back you up against a person whose
> family you threatened with violence shows what a fat sissy coward you are.
>

Like I said, give some SOLID DIRECT Proof that I did any such thing and I'll get off this crap, otherwise, hit the damn road...and for the record, I know serveral Iron Coffins, and what I cannot or will not handle, they will.

See ya later Douglas!

Never could trust a frog in a tale.

A man with a 25 inch long penis goes to his doctor to complain that he is having a problem with this cumbersome instrument and has had more than one complaint.

"Doctor," he asked, in total frustration, "is there anything you can do for me?"

The doctor replies, "Medically son, there is nothing I can do.
But, I do know this witch who may be able to help you."
So the doctor gives him directions to the witch.

The man calls upon the witch and relays his story.
"Honorable Witch, my penis is 25 inches long and I need help. Can anything be done to help me? You are my only hope."

The witch stares in amazement, scratches her head, and then replies, "I think I may be able to help you with your problem. Do this. Go deep into the forest. You will find a pond. In this pond, you will find a frog sitting on a log. This frog has magic. You say to frog, 'will you marry me?' When the frog says no, you will find five inches less to your problem."

The man's face lit up and he dashed off into the forest.
He called out to the frog, "Will you marry me?"
The frog looked at him dejectedly and replied, "NO."

The man looked down and suddenly his penis was 5 inches shorter.

"WOW," he screamed out loud, "this is great! But it's still too long at 20 inches, so I'll ask the frog to marry me again."

"Frog, will you marry me?" the guy shouted.

The frog rolled its eyes back in its head and screamed back, "NO!"

The man felt another twitch in his penis, looked down, and it was another 5 inches shorter.

The man laughed, "This is fantastic." He looked down at his penis again, 15 inches long, and reflected for a moment. Fifteen inches is still a monster, just a little less would be ideal.

Grinning, he looked across the pond and yelled out, "Frog will you marryme?"

The frog looked back across the pond shaking its head, "How many times do I have to tell you?

NO, NO, NO!!!

> > (non-reactive) load, resonant or not. A 50ohm dummy load isn't
> > resonant but will show a 1:1 SWR. Haven't we done this before?
===

I can agree that 1:1 may not mean a resonant condition, but it may not be
purely resistive...
A 1:1 SWR simply means that the impedances are matched:

Take a 50 Ohm radio, an antenna may have a resistance of 33 or 75 Ohms
(~1.5:1 SWR). Take it off resonance, and it will become reactive. The
reactance will alter the overall impedance, so could then make the SWR
perfect.
A purely resistive antenna is surely resonant, if it is not resonant, then
there will be some reactance.

===
"Flip Top Jeep" <flip_top_jeep@hotSPAMmail.com> passed Sparky
through my killfile with this reply...
>
> And I'd like to add that a 1/4 wave whip on a car has an impedance
> of about 36 ohms. That will cause an SWR of about 1.56:1. Trying to
> tune that .56 out will result in a less efficient antenna. Ask BDW.
===

Actually, I make it ~ 1.39:1
But who cares about that little bit... who would even notice the difference?
People can worry too much about SWR, when many antennas will give
about 1.5:1 at resonance.
The difference is so small that it does not matter whether resonance or a
lower SWR is more efficient, nobody will see a difference either way.

Brainbuster.

OK, so they have a licence to show that they are a Ham, but If they get
caught being naughty, they are disowned. Suddenly, their licence is ignored
and they are referred to by fellow Hams as a "CBer".
"Not one of us, must be one of their lot."

I don't think the authorities will ignore that licence when it comes to
punishment. It must surely make matters worse, as an Amateur is
supposed to know what he is doing.

Hi Alan.

Beats me why they still have customers. Out of all the ISPs I have tried in the last year, they rate as the worst of the lot.
Lineone was running fine, until they got their hands on it. My password started being rejected, newsgroup messages dropped to zero at one point. Outgoing messages took days to appear on the groups... and if they contained my thoughts of WOL, they never got there.
My Lineone addy just fills with Spam, some of the headers give Tiscali servers as the source of the messages.

Still, it has to be worth signing up, just for the free gifts. I got a free CD upon sign-up and I receive "Tiscali" install disks with the latest IE version... the last one had Bodyworks on it!
Whenever I get a free ISP disk, I always explore it for free software. "Supanet" include "World Book" on their free install disk available from a certain chain of computer stores. They say you must sign up to load the software, but that depends on how good you are with your computer.
Supanet lost this group totally for a while last year.

Just take the gifts they offer and run like hell.

I know... Typical CBer, wanting something for nothing. But if the companies are offering, then I am accepting.

Peter.

3618. Should I upgrade from Uniden Pro-510XL to the Uniden PC-68XL?

Newsgroup: rec.radio.cb
Date: 2002-03-10 17:20:22 UTC
From: noahkaatz@yahoo.com

I'm considering 'upgrading' from a Uniden Pro-510XL to a Uniden PC-68XL. Is there a big difference between the two radios? I mainly use it listen in on channel 19, so transmit capability is not my main concern. I know I'll add RF gain by upgrading, so is this and any of the 68's additional features/performance worth the investment?

Thanks for your advice.

Wouldn't an upgrade be a sideband radio? Going from an AM
only radio to another AM only radio is a waste. If the 510
does what you want, don't bother. If it makes you feel good,
then just do it. RF gain is a little used knob. I use it less
then squelch.

Because I live in an apartment, and I don't have room for a big antenna farm.

Besides, for the bands I transmit on, the antennas I have up are as
efficient as I can get them.

Sure is, we have our share of extremists.

Have you noticed their small print on the bottom of one of the pages, about
acceptable customers?
"No goths, atheists, intellectuals, homosexuals or Jews
are allowed to enter our premisses."

So if anyone on this newsgroup wants anything from that company, best
ask Dave to get it for you.

I wonder if they ask you to fill out a declaration regarding your religion,
sexual orientation, etc. before they accept you through the door or sell you
a product?
Maybe they use pictures to test if you fit into one of the groups:
Nude male... If you get a "hard on", you're a homosexual.
An encyclopaedia... If you get a hard-on, you're an intellectual.
A large wad of money... If you get a hard on, you're a Jew .

What's a "Goth"?

Brainbuster.

3627. Chuckeesukeee KNOWS where N8 lives

Well Hardee har har vomit brain...you know where he lives. So does anyone with access to qrz.com. That make you special?

I think you oughta go there myself. I think he would love it if ya did.

That goes for any of you CB dweebs who think yer bad. I know N8 has plenty of down home hospitality for you.

And a last aside to Chuckeesuckee...
Come on down anytime, bitch.

You did say you had a CCW permit. You are a liar. We checked.
You did make the threats. You were IP traced. You were kicked off AT&T because of the threats. I think Chuckeedikksuckee has a medical problem. it is called a "truthache".

Sissy ass. Fat chump. Coward. Threatener of women and children. Liar. Punk. Pink muffin boy. All synonyms for K8CPA.

3628. Pink Muffin Boy dweebo expresses himself

You show up on N8's lawn? Never. You are a sissy coward like your but buddy Chuckeesuckee.

It figures that a pus brained NWA wanna be like you would say something like that. You oughta be sterilized, so a mutant queer like you doesnt get too high some day, accidentally have sex with a female, and reproduce.

ONLY social mutants advocate pimping hoes. It shows just how much the Anti-Keyclowns upset you, NeboDweebo. HARDEEHARRHARRHARRRRR! LIFE IS GOOD WHEN YOU ARENT AN NWA WANNA BE HUNK OF PIG TURD WITH NO BRAIN NAMED TIMMY NEBOUT.

Scott, how would you think my name is George? Lets say your not Scott "wink wink" how would you conclude my name is george you only surfaced when @home change to giga news flippy jeep . I will make a deal you show up to Baltimore Computer show show me a license that has Dave M on it, then Dave you can show us your Jeep, we will also get scott to show up with the same stipulations provide proof that he is Scott and he can show us his new jeep, which is your jeep since you are scott. What do you say I will Pay each of you $100.00 to show up and provide this info whadda ya say. I will also show you my license and prove I am not George, will you pay me? Oh if your still having identity trouble just check the posts below I have more of em but am saving them for you to make an ass out of yourself again. So you have till april to find a guy named Dave M with a jeep in your area and convince him to go to the Computer show.

Scott, Do you want sum Mo?

Not just similarities conclusive ip proof , flip top's arrival Scott departure

upplus@hotSPAMmail.com
flip_top_jeep@hotSPAMmail.com

All 3 ip's are from the below posts resolve to Scott but the posts are from Flip top Jeep, but we all know Scott don't have a jeep, Oh thats right he just got one he even posted the info in a post below.

This is from the manual of my new Jeep
(My comments in parentheses):

Special design considerations are incorporated into this vehicle's electronic system to provide immunity to radio frequency signals. Mobile two-way radio and telephone equipment must be properly installed by trained personnel. The following must be observed during installation.

Power connections should be made directly to the battery and fused as close to the battery as possible.

(We are all in agreement here.)

Antennas for two-way radios should be mounted on the roof or the rear area of the vehicle. Care should be used in mounting antennas with magnet bases. Magnets may affect the accuracy or operation of the compass on vehicles so equipped.

(We are all in agreement here.)

The antenna cable should be as short as practical and routed away from the vehicle wiring when possible. Use only fully shielded coaxial cable.

(That sure blows holes in the coax length bullshit.)

Carefully match the antenna and cable to the radio to ensure a low Standing Wave Ratio (SWR).

(We are all in agreement here.)

Mobile radio equipment with output power greater than normal may require special precautions.

(This means HEAVY cable for your DC requirements!)

All installations should be checked for possible interference between the communications equipment and the vehicle's electronic systems.

(Is that fuel pump noise I hear?)

Next for Chuckeesuckee to pray to taste his manly hormonal output.
That's all. punk sissy K8CPA is a weenie loving limp wristed pig.
That's all he has been, all he is now, and all he ever will be. He
threatens women and children, lies about having a CCW permit, lies
about gang affiliation, and thinks he is so smart he cant be checked
on. We did. We have proof. He blows goats and feels superior tho those
who blow dogs.

Actually, the Iron Coffins make the Girl Scouts look like the Hell's
Angels.

Chuckeesuckee hangs out at their clubhouse to be the suckboy when they
all get too high to care.

If you saw any of the Anti Keyclowns you would piss your pink frilly
panties, Chuckeesuckee.

3636. George: What a waste of life

Newsgroup: rec.radio.cb
Date: 2002-03-10 19:33:22 UTC
From: Flip Top Jeep <flip_top_jeep@hotSPAMmail.com>
Message-ID: <3C8BB506.1EF8C660@hotSPAMmail.com>
Source record: 117890

I won't continue this because you *MUST* have the last word.

Just think of this, $100.00 is chump change. $1000.00 *might*
put you in the ball park.

Skip is running good North to South. I'm going back out to play.

I have 40 channels, I'll be on 36 or 38 upper or lower.

Bye looser. -PLONK-

3637. Re: PSK-31 on 11 meters

Newsgroup: rec.radio.cb

Source record: 117891

Possibly, but it's not going to be a Kw.. I'm only going for a single tube amp based on the 4CX800A, good for around 750 watts.

It will only be used at night, when most of my neighbors are sleeping, and only on nights where the noise on 40M is too much..

So no, I don't think it will bother the neighbors, because it will be used responsibly. Just because I have 750 watts doesn't mean I'm going to use it all all the time.. The minimum necessary to make the contact is all I need.

-SSB

Not here. This is a CB newsgroup.. I'm sure most here aren't interested in how I have my 40M and 20M antennas set up.

Besides, I should have added, "For the space and visibility constraints imposed upon me."

Nothing all that new about it. Back in the 20's there was a flap about
the Naval Oil Reserve at Teapot Dome, Wyoming in which Harry Sinclair was
convicted of giving the bribe Albert Fall the Interior Secretary was
aquitted of taking.

It is a pretty fair bet his license renewal will not be automatic. When a
license goes to a hearing it will be his job to convince the panel that it
will be in the public interest to renew it. Definitely not a job for
Horace Rumpole.

Let's not get too coy now, Chris. We both know that CB can be a nice segue into AR. An occassional discussion encompassing AR is NOT taboo, particularly when queried directly. (Despite some of the naysayers.)

Whatever, Nebo...

I'm sure the group could care less that I used to have a G5RV up until the trees in front of the apartment blew down yesterday, taking the antenna with it, so now I'm stringing up a pair of inverted V's for 20 and 40, that they're cut for the voice portion of those two bands, and that it's going to be a few days before I'm back on HF.

As for not making sense, you're the one not following through with the logic. I've put up the most efficient antennas I can for the time being, in my situation. They're as efficient as I can get them, with the tools and the space that I have.

Some nights, it's hard to get heard on only 100 watts. Every time you double your power, it's 1/2 an S-unit. So going from 100 to 400 watts is an S-unit, which might make a difference. Best I can do with 750 watts is ALMOST 1 1/2 S units increase. Not a big difference on noisy nights, but sometimes it'll be enough.

So, since you didn't follow through, I'll spell it out for you.

1. Put up the most efficient antenna you can, to radiate as much of the signal you're putting up the line as possible
2. If that's not enough, then add power, but use only as much as you need to make the contact.

Is that contradictory? I don't think so.

I changed my mind about this post. Maybe if keyclowns over-volt their
"boxes" they will blow up, ridding the band of obnoxious nuisances.

YES! ADD VOLTS TO YOUR ILLEGAL CB AMPS!!!

E=I/R IS THE SECRET FORMULA HAMS DON'T WANT YOU TO KNOW!

IF YOU HAVE A BASE AMP THAT RUNS ON 110VAC, MAKE UP A CORD AND PLUG IT
INTO 220VAC!! YOU WILL BE LOUD!!

MOBILEERS!!!POWER YOUR MAULS WITH 48VDC AND YOU WILL BE A BIG
STRAPPER!!

SMOKE IS A SIGN OF WATTS AND SO IS HEAT! SO REMEMBER, THE MORE SMOKE
AND HEAT YOU SEE - THE MORE WATTS YOU ARE GETTING OUT!!!

3654. 15 YEARS AGO.....

Newsgroup: rec.radio.cb
Date: 2002-03-11 01:12:54 UTC
From: icecoldnyc@aol.comICECOLD
Message-ID: <20020310201254.02646.00000389@mb-cg.aol.com>
Source record: 117966

What a difference 15 Years Makes
Do you remember this? It was 1987!
At a lecture the other day they played an old news video of Lt. Col. Oliver North testifying at the Iran-Contra hearings during the Reagan Administration.
There was Ollie in front of God and country getting the third degree, but what
he said was stunning! He was being drilled by some senator:
"Did you not recently spend close to $60,000 for a home security system?"
Ollie replied, "Yes, I did, Sir."
The senator continued, trying to get a laugh out of the audience,"
Isn't that just a little excessive?"
"No, sir," continued Ollie.
"No? And why not?" the senator asked.
"Because the lives of my family and I were threatened, sir."
"Threatened? By whom?" the senator questioned.
"By a terrorist, sir," Ollie answered.
"Terrorist? What terrorist could possibly scare you that much?"
"His name is Osama bin Laden, sir" Ollie replied.
At this point the senator tried to repeat the name, but couldn't pronounce it,
which most people back then probably couldn't. A couple of people laughed at the
attempt.
Then the senator continued. "Why are you so afraid of this man?" the senator asked.
"Because, sir, he is the most evil person alive that I know of," Ollie answered.
"And what do you recommend we do about him?" asked the senator.
"Well, sir, if it was up to me, I would recommend that an assassin team be formed to eliminate him and his men from the face of the earth."
The senator disagreed with this approach, and that was all that was shown of the
clip.
(If anyone is interested, the senator was none other than Al Gore)

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

hey boobner.....the subject of this thread seems to be, or was, that
toll free is teaching our resident ham radio extra...how to build
amps...and that boobner, ...is a good thing.....

Amateur Radio Newsline™ Report 1282 – March 8, 2002

Amateur Radio Newsline report number 1282 with a release date of
Friday, March 8th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The Dayton Hamvention announces the EMMY AND OSCARS of Amateur Radio. We have the winners on Amateur Radio Newsline report number 1282 coming your war right now.

(Billboard Cart Here)

**

HAMVENTION 2002: AWARD WINNERS NAMED

The Dayton Hamvention has named Radio Amateur Information Network founder Alanson “Hap” Holly, KC9RP, as its 2002 Radio Amateur of the Year. Holly received the news of his selection on Thursday evening February 28th in a phone call from Cathi Hoskins, N8ZCQ, who chairs the Hamvention Awards and Banquet Committee. KC9RP tells Amateur Radio Newsline that he was completely taken by surprise:

--
Holly KC9RP: “I was absolutely stunned! In fact, all I could say was me? I mean seriously, I was just absolutely floored.”
--

Holly, lives in Des Plaines Illinois has been licensed since 1965. He began his ham radio informational programming career in 1984 on a local Chicago Area repeater. This eventually lead him to become founder, moderator and guiding light of a weekly amateur radio audio feature magazine known as the RAIN Report.

--
Sample audio from Rain Report.
--

RAIN programming is distributed to hundreds of repeaters across the country via a telephone dial-up line, the rainreport.com website, by a subscription tape service and broadcast over W-A-Zero-R-C-R's weekly 160 meter informational net.

But that’s is only a small part of the Hap Holly story. Originally licensed in Escondido California at age 14, Holly who has been blind since age 7 served as a phone-patch station and net control for the famed WESTCARS traffic net until 1970. He then headed off to Principia College in Illinois and from 1970 to graduation in 1974, ran phone patches and kept radio schedules for many of

his fellow students.

Holly graduated Principia with a Bachelor of Arts degree in Sociology, and soon found himself in the Chicago area. There, he sought out world-class jazz accordionist Leon Sash, to pursue further training in music. As a professional keyboard player, Holly's diverse repertoire of American music of the past six decades has made him a popular choice in the Chicago area.

Hap met his wife-to-be while he was teaching a class in non-visual perception to high school students at a summer camp in Buena Vista, Colorado. The two were married in August of 1976. Stephanie, who is sighted, received her ham ticket and KA9WKD callsign in 1986.

Over the years, Hap Holly has written articles for the Spec-Com Journal, Radio Scan Magazine and occasionally reports for us here on the Amateur Radio Newsline. Holly is also a common sight at the Dayton Hamvention, taping forums which are then incorporated throughout the year into his RAIN Reports. And since 1975 KC9RP has been an honored member of the Des Plaines Lions Club. He has also been a member of the Des Plaines Toastmasters since 1976. He and Stephanie are also active with Des Plaines Illinois Emergency Medical Alert system.

Named as this years Hamvention Technical Excellence award winner is Alan Waller, K3TKJ, of Laurel, Delaware. Waller was chosen for his work that lead to the interfacing the Internet to Amateur Radio.

First licensed in 1961, Waller combined his decades-long love for Amateur Radio and a burgeoning interest in the then-new Internet to design and manage the www.qsl.net and www.qth.net web sites. That was back in 1993. Since that time, Alan Waller's web sites have come to serve the needs of tens of thousands of ham radio operators worldwide by providing a vast technical reference platform, an electronic mail service, web page hosting services, and links to thousands of other ham radio related sites. And in the true spirit of the Amateur Radio, Waller's initial work utilized leading edge experimentation to see what could be done with the technology then available. This has developed into a mature, reliable service to the world wide ham radio community.

Rounding out this seasons winners are a pair of pair of space exploring hams who have been named as co-recipients of the 2002 Hamvention Special Achievement Award. Former astronauts Owen Garriott, W5LFL, and Tony England, W0ORE, are being honored for paving the way for manned ham radio operations from the space shuttles that has made ham radio a permanent part of mans exploration of space.

Owen Gariott, W5LFL was first. On November 28, 1983, Garriott, was launched into space aboard the space ship Columbia for the STS-9 mission. It was the Spacelab 1 mission and Garriott brought along the first Amateur Radio station on a crew-tended space vehicle. It was a simple Motorola hand held transceiver connected to a special antenna designed to fit in the Space Shuttle's window.

Three days later, W5LFL came on the air and hams across the United States and around the world were witness to a historic radio transmission:

--
Owen Garriott W5LFL: “This is W5LFL in Columbia. W5LFL in Columbia orbiting the Earth at an altitude of 135 nautical miles passing over the U.S. West Coast and calling CQ.”
--

Among those who heard Owen Garriott's Amateur Radio transmissions from space was Lance Collister, WA1JXN of Frenchtown Montana. Collister, who is now W7GJ, is credited with being the first amateur to work an astronaut in orbit. Take a listen:

--
Lance Collister WA1JXN/W7GJ: “W5LFL on Columbia, WA1JXN, W-A-1-Japan - Xray-Norway, WA1JXN Frenchtown Montana standing by.”

Owen Garriott, W5LFL: “Hello W1JXN, WA1JXN, WA1-Juliet-Xray-November. This is W5LFL. You’re our first contact from orbit. WA1JXN, how do you read? Over?”
--

The success of Garriott’s mission lead to the development of SAREX -- The Shuttle Amateur Radio Experiment. And, over the years, SAREX permitted youngsters in classrooms around the world to speak directly with astronauts in space. But for this to happen, the technology of manned ham radio operations from space had to be enhanced. This aspect of the then new SAREX program fell to the next ham radio operator orbited: Tony England, W0ORE.

W0ORE flew into space on the shuttle Challenger in 1985. It was Mission 51F, Spscelab 2. In addition to the 2 meter FM voice gear, Tony England also had with him the first ever ham television station to go into space. Slow Scan yes, but capable of sending back high resolution images which hams on the ground equipped with SSTV gear could view live or record on a simple audio cassette for later viewing and historical archiving. From space, Tony England described the station he was using:

--
Tony England, W0ORE: “Essentially we’ve got a commercial TV camera that anyone could go out to their local radio store ant buy. We feed this into a scan converter built by a commercial outfit and modified by NASA Amateur Radio clubs and this takes a snapshot of the scene and digitizes it and put it in a memory.

Then its sent to a handie-talkie like this. From there we will send it over a wire up to the upper window upstairs and to this antenna when I get it up there in the window. Then it will be transmitted to the ground.

When we get going, we will be able to send color TV images of what we are doing on board as a series of snapshots updated every 10 or 20 seconds. Amateurs anywhere on the ground will be able to receive them, and ones with scan converters will see the pictures.”
--

That flight also marked another first. The first ever two way television -- ham radio television -- to and from space.

Tony England went on to flight prove both the improved FM voice and then new SSTV systems. The SSTV was so successful that NASA gave very serious consideration to a permanent installation on all shuttles for back up communications. More important, the early on-orbit operations by Own Garriott W5LFL and Tony England W0ORE made possible the thousands of educational contacts between children in school classrooms and the crews flying in space. First, on board the shuttles, and now as a permanent part of the International Space Station.

Hap Holly KC9RP, Alan Waller K3TKJ, Owen Garriott W5LFL and Tony England W0ORE will receive their honors at the Hamvention Awards Banquet slated for Saturday evening, May 18th at the Nutter Center in Dayton Ohio. Amateur Radio Newsline will be there to bring you this story and all the news about Hamvention 2002. (ARNewsline™ from Dayton Hamvention® news release. Some audio from “Amateur Radio’s Newest Frontier” and “SAREX - The Shuttle Amateur Radio Experiment” video presentations)

**

RADIO RULES: FCC RESUMES VANITY PROCESSING

Vanity license processing is getting back on tract. According to a Legaue bulletin the FCC now has all outstanding vanity applications filed last October in hand and is ready to resume routine vanity processing. Until recently a single missing vanity application had been holding up a backlog of more than 2000 vanity applications. The FCC credits the ARRL in part with helping to locate applicants and resolving the problem. (ARRL, FCC)

**

RESCUE RADIO: AMATEUR RADIO EMERGENCY COMMS SUMMIT

The first ever Amateur Radio Emergency Communications summit was held in Indianapolis last week. Amateur News Weekly’s Jack Parker, W8ISH, reports on the success of this first meeting.

--
They came from the Red Cross, Salvation Army, ARES, RACES and even CB-radio’s REACT team. Two dozen representatives of different Amateur Radio emergency communications groups met in a Federal Building training room to find ways of helping local and state emergency management organizations. The summit was organized by Marion County ARES director Mike Palmer, N9FEB. Palmer cited a need to develop better communications and cooperation between the different groups.

Many amateurs wear two or three different hats when it comes to providing public service. Palmer wants to identify those who are willing to help and to better utilize the voice and data communications available in the Marion County Amateur Radio Community. Many of the summit participants agreed this type of effort is long overdue.

Members of Army-Navy and Air Force Mars, as well as the Indiana Wing of the Civil Air Patrol offered their services during times of disaster. Everyone agreed this was a good start and look forward to future efforts to better train and organize Amateur Radio Emergency Communications in Marion County and Central Indiana.

Reporting from Indianapolis for Amateur News Weekly, this is Jack Parker W8ISH.

--

According to Jack, everyone came away from the meeting knowing that cooperation between groups is a key element in providing better service to the public. (ANW)

**

RADIO RULES: FCC ADOPTS AMBER EAS EVENT CODE FOR CHILD ABDUCTION CASES
The Federal Communications Commission has announced the adoption of a Report and Order amending the Emergency Alert System rules. Included are several new EAS event and location codes, which broadcast stations and cable systems may use to alert the public in the event of state and local emergencies. Of these, a new Child Abduction Emergency event code may be the most interesting to hams involved in Search and Rescue and who have E-A-S decoders installed in their repeaters.

The plan is described as a voluntary partnership between law enforcement agencies and the media that will be used to alert the public of serious child abduction cases where police believe that the child is in danger of bodily harm or death. Under the plan, radio and television stations will be permitted but not required to interrupt programming to disseminate information concerning serious child abductions when the new Child Abduction Emergency code is received. It could also be used by hams as an automated call to action to help find a missing child if used to activate an E-A-S equipped Amateur Service repeater.

Police departments say that every minute counts in dealing with an abducted child situation. In adding the Child Abduction Emergency code the FCC says that its responding to public concerns. (FCC)

**

ENFORCEMENT: FCC COMPLETES GEORGIA ARRL VEC EXAM SESSION AUDIT

The FCC has wrapped up an investigation into apparent irregularities at five ARRL VEC-sponsored Amateur Radio examination sessions in Georgia during 2000 and 2001. As a result of the probe, FCC Special Counsel Riley Hollingsworth says that several examinees will be called back for partial retesting:

--
Riley Hollingsworth: “We determined reviewing all of the information that was brought to our by the League that eight examinees will have to be retested on the code element. The ARRL has also relieved ten VE’s of their duties as volunteer examiners.”
--

According to the ARRL Letter, all V-E’s who might have been involved were suspended after the FCC investigation began last year. (FCC, RAIN)

**

ENFORCEMENT: A REPEATER OUTSIDE OF THE BAND

The FCC is also looking at the operation of repeater in the Metro New York City area. Again, the FCC’s Riley Hollingsworth:

--
Riley Hollingsworth: “We opened an inquiry into allegations that an uncoordinated repeater operated by Thomas Batista, KC2DDD, and Gerardo Arias, N2IFU, in Corona and Staten Island New York. Now that repeater is not only causing interference to a coordinted repeater, but the input is apparently on a frequency not even allocated to the Amateur band. So, needless to say we are real interested in reviewing that response when it comes in.
--

What Hollingsworth will be looking for is an answer to why the machine is using 143.020 MHz as an input frequency as well as why its on the air without coordination. 143.020 MHz is a full 800 Kilohertz below the bottom edge of the 2 meter Amateur band. (FCC, RAIN)

**

CONVENTIONS: SOUTH EAST VHF SOCIETY CONFERENCE

On a far lighter note, the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27th in Oak Ridge, Tennessee. And they too are putting out a call for papers. If you are interested in participating, please contact KG4QDZ by e-mail to kg4qdz@arrl.net. (VHF Reflector)

**

CONVENTIONS: CHARLESTON HAMFEST MARCH 16

And the 18th Annual Charleston Area Hamfest and Computer Show will be held Saturday, March 16, 2002 from 9 AM to 3 PM at the Coonskin Armory in Charleston, West Virginia. Talk-in is on the 145.35 MHz repeater. Admission is $5 and there will be free parking. More information is available by e-mail to n8tmw@arrl.net. (N8TMW)

**

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

HAM RADIO POLITICS: NCI LEADER CALLS FOR ELECTIONS

Bruce Perens, K6BP, the founder and an incumbent director of No Code International says that its time for new directions for the group and has called for elections. Amateur Radio Newsline’s Norm Seeley, KI7UP, has more:

--
According to Bruce Perins, K6BP, when he started NCI in 1997, he never dreamed that it’s goals would be achieved so quickly. But says Perins; “we are most of the way there.”

Perins notes that last year the International Amateur Radio Union voted to ask for the removal of the international treaty provision requiring Morse Code testing for Radio Amateurs. Now Perins observes that even ARRL has voted in favor of removing code requirements from the international Radio Regulations.

With what he terms as -- no remaining credible opposition to NCI's cause left on the international level -- Perins says that it is time to turn NCI’s focus to domestic policy. He says that for NCI to take an appropriate role in the end-game of the no-code battle means cooperation with national societies like the American Radio Relay League. And to do this, Perrins believes may take some new people.

So Perins has asked that an election for new directors be held no later than April 30th of this year. He also says that any person who was an NCI member on December 31, 2001 can be a candidate for director, and is eligible to vote in the election.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

More information about No Code International is on the web at www.nocode.org. (ARNewsline with information from K6BP)

**

HAM RADIO IN SPACE: AO-40 GPS TEST RESULTS PUBLISHED

The February issue of GPS World included an article titled Formation Flying in Space. Authored in-part by AMSAT North America's Frank Bauer, KA3HDO, the essay shows G-P-S results from the receivers that NASA’ Goddard Space Flight Center provided for flight on the AMSAT OSCAR 40 bird. According to Tom Clark, W3IWI, the data shown in the article was downloaded using AO-40's RUDAK system by WD0E and KB0G. (ANS)

**

WRTC-2002: ORGANIZING COMMITTEE ANNOUNCES THE COMPLETE LIST OF OFFICIAL ON-SITE REFEREES

The WRTC 2002 Organizing Committee has named a full list of on-site referees for the upcoming games. The committee says that it received more than 100 highly qualified applications and those chosen were from that group. A full list of referees and other information is available on the web at www.wrtc2002.org (WRTC2002)

**

DX

In D-X, word that Dave Cree, G3TBK, has returned to work in the Caribbean. Throughout March Dave will be active as J88DR from St. Vincent. For the first two weeks of April look for him J3 slash G3TBK from Grenada. Operations will be on all bands, but concentrating on the WARC bands, mostly on C-W, but with some SSB. QSL to Dave's home call either direct or via the RSGB bureau. (RSGB)

The New Zealand Amateur Transmitters Society is warning hams world wide of what they say is a pirate operation. According the NZART News, a maritime mobile station using the callsign ZL2TO and the name Tony has been heard recently operating on nets on 15 Meters. This station currently gives his location as the Cape Verde Islands. Only one problem. The ZL2TO call sign is allocated the Waitara Amateur Radio Club. (NZART)

And the South Africa Radio League news service says that anyone who has held a QSO's with 7Q8 slash ZS6GH or C9 slash ZS6GH should write them off . SARL says that these have been declared null and void because license or authorization to operate was issued by the telecommunications regulators in Malawi or Mozambique. (SARL)

**

THAT FINAL ITEM: NOMINATIONS SOUGHT FOR THE YOUNG HAM OF THE YEAR AWARD

And finally, we started this weeks newscast with a story about awards. Lets end it on a similar note as we here a Amateur Radio Newsline officially open the 2002 nominating season for our own Young Ham of the Year Award.

The Young Ham of the Year award was created in 1986 by amateur Radio Newsline producer Bill Pasternak, WA6ITF, to fill what he viewed as a void where younger members of ham radio society were often overlooked:

--
Bill Pasternak, WA6ITF: “When I was a young ham in the 50’s and 60’s the good deeds of young hams were often overlooked and ignored. When I grew up I was fortunate enough to be in a position to remedy this and thats how the Young Ham of the Year Award program came about. Thats how it came into being”
--

The award as originally envisioned as very low budget. One idea was for a certificate that would be mailed to a ham, age 18 or younger who had shown some exceptional ability or performed some heroic deed that set him or her apart from the crowd. When Bill mentioned the idea to Chip Margelli K7JA, of Vertex Standard back in the company’s days as Yaesu USA, the idea quickly expanded. Margelli offered company support on the spot:

--
Chip Margelli, K7JA: “When Bill Pasternak gave me a call and dsescribed the project to me in the tiniest bit of detail it was obvious that this was a no-brainer and something that we as a company at Yaesu wanted to encourage. So, I jumped at the opportunity to be a major contributor and it has been a great project ever since.”
--

The award now had substance, but it lacked a permanent home. One was found in 1993 when it was invited to the Huntsville Hamfest:

--
Bill Pasternak, WA6ITF: “The way we got to Huntsville? Simple. We advertised. We put a notice into the newscast that we were searching for a permanent home. The answer came in a note from Scotty Neustadter, now W4WW, who is the Huntsville Hamfest Chairman. Scotty basically said bring it to Huntsville. And we did.”
--

While the presentation ceremony did go to Seaside Oregon in 1994, it returned to Huntsville in 1995 where it has been ever since. And in 1996 a second major corporate underwriter came on board. C-Q Magazine. Rich Moseson W2VU, is editor:

--
Rich Moseson, W2VU: “We at CQ have always thought that it is very important to promote Amateur Radio to young people and we saw that co-sponsorship of the award was the way to help do that.
--

What CQ did was to add to the Young Ham of the Year awards chest something very special. A week of fun and excitement at Spacecamp. Today, with corporate sponsorship from Vertex-Standard USA and CQ Magazine, and support from countless others including the ARRL, Dave Bell Associates and Rosewood Communications the Young Ham of the Year Award continues to honor the Amateur Radio related achievements of those hams age 18 or younger. And now its time to find a fitting recipient for 2002.

Full details, rules and a nominating form are available right now on our website at www.arnewsline.org. Just scroll down to the Young Ham of the Year Award area and click to download. Or you can send a self addressed stamped envelope to the 2002 Newsline Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350 and we will mail back the materials.

The Amateur Radio Newsline Young Ham of the Year Award is a one of a kind. It honors the youth of ham radio and in doing so, we hope it helps to insure a bright future for the hobby and the radio service that all of us love. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, another reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

I don't think that licensing will help at this point. The reason that
the CB license was eliminated in the first place, was because the
majority of people flooding to the bands in those days were not
bothering to get a license, despite the FCC's efforts at making the
license more attractive (dropping the price to $4.00, and then free, and
the instant temporary permit).

Many people that did have the license didn't use their call letters, since they assumed (probably correctly) that if they were going to do illegal things that it would be stupid to identify themselves, and make the FCC's job easier (although I knew some mental midgets back then that operated straight up and "legal" on their home channel, and then dialed up to a freeband frequency and became unit XYZ, like the FCC wouldn't be able to figure out that they were the same person).

The FCC soon found out that they were outnumbered, and couldn't be effective in enforcement of the existing rules, so they relaxed the rules and eliminated the license, thereby throwing in the towel.

The FCC rarely pays much attention to the CB band, unless there is a particularly bad case of interference, or bootleggers suddenly show up on public service frequencies etc. A situation that the illegals know all too well, much to the consternation of the rest of the users.

A license fee might give the FCC some enforcement dollars, but the majority of people that use 11 meters, would most likely not bother getting one.

Exactly.

>
> What needs to be done, IMHO, is self-policing of the band.

There is no incentive for people to follow the rule of law, when
operating illegally is so much more "fun".

> It is not hard to convince CBers that the band is being trashed, but
> it IS hard to explain to them that they can do something about it by
> themselves, or as a group or CB club.

A club that has no power to enforce the rules. Collecting and forwarding
information to the FCC has historically resulted in a "luke warm"
response, if anything.

> Any CBer can improve the band by simply not contributing to the crap
> and trying to convince others to do the same.

I believe that there are two types of people. Those who respect the
rules and other people, and those who don't. Those that already have
respect need no convincing. For those who don't, no amount of "lip
service" will change their habits.

> Or they could take a more active role by identifying and reporting
> those that abuse the band. Either way, the social perception needs to
> be changed before things can improve.

Until there becomes a real fear factor toward a much more likely
punishment for operating illegally, nothing will change.

This post is an wonderful example of the output gains involved when applying higher voltages to 2SC2879's. Ice is correct in that while supplying 13.8 to 14

volts to the device while allowing it the draw ar much as it can will only result in an average output of roughly 100 to 120 watts per device in the arrangement, raising the the voltages to the device(s) will result in an exponential GAIN in current draw from the device thus sending output levels SOARING. While this is not reccomended with "run of the mill" units, there certainly are unit built to allow for this type of operation.

>YES! ADD VOLTS TO YOUR ILLEGAL CB AMPS!!!

Great advice from Mr. Voobner as long as editing is done correctly to his statement.

>IF YOU HAVE A BASE AMP THAT RUNS ON 11OVAC, MAKE UP A CORD AND PLUG IT
>INTO 220VAC!! YOU WILL BE LOUD!!

Again.................Great things can happen if this is done right such as in the case of a Heathkit SB-220 or Ameritron that is set up for dual voltage use as you will see much better output from the unit with the 240 volt feed.

>MOBILEERS!!!POWER YOUR MAULS WITH 48VDC AND YOU WILL BE A BIG
>STRAPPER!!

No need to go that high in volting up. 18 to 20 volts will do just fine.

>SMOKE IS A SIGN OF WATTS AND SO IS HEAT! SO REMEMBER, THE MORE SMOKE
>AND HEAT YOU SEE - THE MORE WATTS YOU ARE GETTING OUT!!!
>
>-A
>

I'm not really sure where you get the smoke idea unless you were smoking something while writing your post the the group. Heat is always a factor that has to be addressed whan producing ANY type of power.For some reason, I got the mental picture of Mr. Voobner doing his smoke and heat experiment by studying the effects of kinetic heat by wringing his hands together tightly hoping that amplifiers will be blown up by his posting the the group.

Now armed with the knowledge that Mr. Voobner has either very limited or no experience in electronics, we can understand how he could and would come to this conclusion.

Great repost you have here Ice. While the normal(pun intended) detractors will
have something to say contrary to what you have posted here. There are certain
fundamentals that newbies to the sport DO NEED to understand that can go beyond
conventional thinking in electronic theory. Certain transisor devices respong
exponentially to increased appied voltages that do not show company spec sheets
as they only list "rated" voltages for a certain device. Over time and trial
there have been specific characteristics of a 2SC2879 that have been used and
exploited to their full potential by those who understand how this can be done
to just within the limits of the device and have it still remain a reliable

device.

Ice,
This is a good example of a 'little knowledge' being dangerous. While some of the principals stated are at least correct, the application if those ideas leaves a bit to be desired. There is much more to be considered in increasing the output of a particular device than to just increase the applied voltage. It works to a point, but that point may not be exactly where you thought it was, and it certainly isn't twice the 'normal' voltage. It's in the best interest of the transistor manufacturers to know the limits of their products and to give the users that information, which they do. When the user exceeds those limits, what do you think is going to happen?
This re-post is a very good way to find the 'Do Not Exceed' limits, but a very silly way to find reliability. Which would you rather have??

This all depends on some VERY different VARIABLES!
You have to take into account the DRIVE being put to the device. If rated for a specific VOLTAGE and INPUT you will get a certain result. Now, suppose you raise the voltage and available CURRENT to the device while LOWERING the CONSTANT input while at the same time, adding peaks into the constant as in the form of a MODULATED, LOW carrier. You will have much the same lifespan as a higher input feed would at a lower voltage would allow.

Well, as the anti's like to say, since we are all criminal CBers, why
wouldn't we like the radio shows of two jailbirds like them, right? :-)

Subject: Trucker In Need

A trucker who has been out on the road for three weeks stops into a brothel outside Vegas. He walks straight up to the Madam, drops down $500 and says, "I want your ugliest woman and a bologna sandwich!!!"

The Madam is astonished. "But sir, for that kind of money you could have one of my finest ladies and a three-course meal."

The trucker replies, "Listen sweetheart, I ain't horny, I'm homesick."

Tom,

This is a CB myth! The correct coax length is whatever length it takes to get from the radio
to the antenna. If you get different readings from trimming coax to "certain" lengths, it means
that you are treating the symptom and not the cause. Only in very special cases does the feedline need to be certain lengths.

Here's a quick example: For those of who are hams and operate on frequencies MUCH lower than 27 MHZ at times, if what you say is true, then for 75 meter mobile, we would
have to have 60 feet of coax (using the 1/2 wave formula) in the car. Just what in Heaven's
name would we DO with all that coax? Yet in my old station wagon, where the radio was
remoted to the back, the total coax was less than 4 feet. Currently, it may be 7(?) feet from
the radio to the antenna. And not only that, I operate infinitely from 3.7 to 30 MHZ on the
same antenna (special multi-band antenna), same short coax run. Coax length is a myth that
was born on 11 meters, lives on 11 meters, and continues to be perpetuated on 11 meters.
I mean no disrespect, but coax length is just a bunch of hooey. In setting up any radio, any
band, use the best coax you can, use just enough to get from antenna to rig, but try to keep it as short as possible to minimuze losses. "Tune" out the SWR at the ANTENNA by fol-
lowing the manufacturer's instructions--usually by lengthening or shortening the radiating ele-
ment.

You guys do know that with PSK31 you only need to use very low power
right? Less than 15 watts gets you around the world. Hell, less than 6
gets me into Europe on 10 and 20m.....

Trains post Randy, and don't forget all his(trains) others under
bigradio.biz

"This all depends on some VERY different VARIABLES!
You have to take into account the DRIVE being put to the device. If rated
for a specific VOLTAGE and INPUT you will get a certain result. Now, suppose
you raise the voltage and available CURRENT to the device while LOWERING the
CONSTANT input while at the same time, adding peaks into the constant as in
the form of a MODULATED, LOW carrier. You will have much the same lifespan
as a higher input feed would at a lower voltage would allow.
Train"

SERIOUSLY over volting can and does blow out transistors, 18 volts is not
really much to worry about in the device we're talking about even if it is
50% higher than the "rating" from Toshiba.

There's something to be be said for merely letting the illegals know
you don't approve of their behavior.

*It counters the illegals claim that "no one cares".
*It balances the social perception that CB is lawless.
*Reaction of illegals further expose hypocrisy and ignorance.

===

Absolutely.
If the equipment being affected is not a radio receiver of some kind, or is not switched to receive signals (as in a stereo system while playing CDs or tapes), then no matter how dirty the signal... it should not be able to get in.

If the equipment is not supposed to be receiving any radio signal at the time, then it is NOT being caused by a dirty signal.
To put it simply, which harmonic of 27MHz will intefere with:
A CD player?
An audio tape player?
A computer monitor?
Grandads gold fillings? (He keeps hearing voices in his head).

Unfortunately, an AM signal is rather easy to demodulate. Signals picked up on wires can be demodulated by the first diode they meet... even a poor joint or connection can do the job. Hell, you can even receive, demod and listen to an AM signal without any power connected (as many of the group regulars will know).

For those reasons, the UK Radio Invesigation Service (RIS) will not entertain complaints about inteference to such equipment. They also refuse to investigate inteference to "Medium Wave" (AM) broadcast receivers, as harmonics must be higher than the fundamental and AM receivers can be rather prone to inteference.

Even with receivers, inteference can be due to front end overload. With UK TV being in the UHF band, this is our most common cause of TVI... Cured with a braid breaker and high pass filter on the offended TV. No matter how well

you filter your CB equipment, it will not stop that problem.

Also, regardless of how clean or dirty the signal is, more power means a greater chance of breakthrough. Although it is possible to intefere with less than the legal power, or to run high power without problems... if you know how to avoid or cure problems.
The antenna should be as high as possible and away from other antennas or wires. The SWR should be reasonably low as a high SWR can help to cause inteference. I have also know an amp cause TVI because the input impedance did not match the output impedance of the radio.

Brainbuster.

> configuration and yield similar watts. Go figure...throws all the simple
> mathmatics out and now we have to get into some quantum physics and
calculus.
> Yuck. Let's keep it simple!.

It is simple, sort of.

1) An active device is a variable resistor, no more no less. Current flows source to drain (FET terminology used, think cathode to plate or emitter to collector if you wish) under the control of a gate. So it is an automated rheostat with some flunky in the boiler room twisting the knob as hard as he can, with any luck tracking the commands he is getting.

2) Like any other device it is rated in terms of what it can do and what it takes to blow it up. Would not suggest buying a switch in the hardware section of Walmart to switch a 7100V line. For all things there is a time and a place.

So yes, if one is switching power it is a jake idea to have a power supply capable of actually delivering what is demanded with a minimum of voltage drop and smoke for no better reason than the guy in the boiler room loses control when this happens. Power supplies are a very neglected area of

radio.

3) While it may take calculus to prove it, the idea that maximum power is transferred when the load resistance is equal to the resistance of the infinitely variable rheostat ain't rocket science. And it should occur to someone that matching a 50 ohm resistive load to a drain resistance going all over the place is not a job for children. But it should also tell us that when you fiddly-fart with the voltages and currents drawn in an amp without at the same time doing something with the matching network the most likely result is a disproportionate increase in heat.

Proving once more the three rules of Technicianing:

1) Know when to quit
2) Know when never to get started
3) Try not to out-engineer the man that built it armed with two fanzines and a parts catalog.

Dick N&#65533;BK

>I'm considering 'upgrading' from a Uniden Pro-510XL to a Uniden
>PC-68XL.

Don't! Make the jump to a Uniden Grant LT (Or XL, if you can still find them.)
The improvement will be noticeable. (Especially on receive.) Take care and 73.

Hi Dick,

Thanks for the response. I just e-mailed Jay with a question concerning the IMAX. Perhaps you might be able to offer your take. I see that there is now a ground plane kit available for the IMAX. Will the IMAX's performace actually improve with the addition of a ground plane section? (Transmitted signal or TVI/RFI-wise?) Take care and 73.

Subject: Fw: Problem with one of YOUR users!

Hello Charles,

Thank you for bringing this to our attention. We will track this back
to
the subscriber and take appropriate action. Because our company,
Buckeye
Cablevision Inc., is regulated by the FCC; we cannot give out any
further
information about this without a court subpeona.

Thank you,

Brian
Buckeye Express

3724.)OT) MODERNIZING THE CHURCH

Newsgroup: rec.radio.cb
Date: 2002-03-12 02:51:24 UTC
From: arcweb@bnnorth.net
Message-ID: <3c8d6cb5.734126@news.bright.net>
Source record: 118038

MODERNIZING THE CHURCH

The elder priest, speaking to the younger priest, said, "I know you were reaching out to the young people when you had bucket seats put in to replace the first four pews. It worked. We got the front of the church filled first."

The young priest nodded and the old one continued, "And, you told me a little more beat to the music would bring young people back to church, so I supported you when you brought in that rock 'n roll gospel choir that packed us to the balcony."

"So," asked the young priest, "what's the problem?" "Well," said the elder priest, "I'm afraid you've gone too far with the drive-thru confessional." "But Father," protested the young priest.

"My confessions have nearly doubled since I began that!"

"I know, my son, but the flashing neon sign
'TOOT 'N TELL OR GO TO HELL' has to go."

3727. Beacon on 11 meters

Newsgroup: rec.radio.cb
Date: 2002-03-12 03:12:50 UTC
From: mybigcb@aol.com
Message-ID: <20020311221250.11066.00001565@mb-cu.aol.com>
Source record: 118039

Ok, here's what I came up with so far for a beacon I'm working on. Someone said that as long as it stays within part 15 it should be OK. Well I went to the local Good Will store this weekend and happen to find one of the old kids CB walkie talkies. I checked this out and it puts out close to a wopping 1/4 watt. Now if I lower the battery voltage just a little I can get it down to 100mw or so. Then take the mic out and feed the CW audio into it direct this should work. The only thing is it's on AM, I much would rather it be on SSB but this will at least get the ground work laid. The next thing I would have to do is change the channel on it, it's the older kind that came with channel 14 transmit but hears all 40. So, hears the thing, do you think a AM beacon will work and be heard as say a SSB beacon? I also found a weather proof box to mount this within so I can mount it right at the antenna and only use about 2 feet coax. The antenna would be a older Antron A-99 up about 20 feet. I'm looking for an older 23 channel SSB unit so I can use it once I get this one working. :) Also to the one's that said that they would rather hear a low power beacon rather than a someone running a KW or more, I hear ya.
Also I don't see why the hams would be so upset if a CB'er wanted to put a beacon project on CB running low power, so long as it was within the CB band and not out of band, what's the big deal. I'm hoping to have it running in a couple of weeks. I'm now working on the 555 timer system and a audio CW board so it can play the same message over and over. I will keep all posted on when I get it up and running on the air. As of right now it transmits on channel 14 unless I can get a crystal to change the walkie talkie to another channel.

I am not sure of the answer. The question is this - even though you may well be within the legal requirements, I have a feeling that the system would have to be certificated by the FCC (just as your cordless telephone - be it 47 MHz, 900 MHz, 2.4 GHz, spread-spectrum or otherwise. Maybe some more informed folk on the board could share their knowlege with us. Believe me, no flames intended - this can get a bit knotty at times ...

3732. (OT) Pain Relief

Newsgroup: rec.radio.cb
Date: 2002-03-12 04:41:18 UTC
From: arcweb@bnnorth.net
Message-ID: <3c8d8611.7227252@news.bright.net>
Source record: 118044

The Pain Machine

A married couple went to the hospital to have their baby delivered. Upon their arrival, the doctor said he had invented a new machine that would transfer a portion of the mother's labor pain to the father.

He asked if they were willing to try it out. They were both very much in favor of it.

The doctor set the pain transfer to 10% for starters, explaining that even 10% was probably more pain than the father had ever experienced before.

But as the labor progressed, the husband felt fine and asked the doctor to go ahead and kick it up a notch. The doctor then adjusted the machine to 20% pain transfer. The husband was still feeling fine.

The doctor checked the husband's blood pressure and was amazed at how well he was doing. At this time they decided to try for 50%.

The husband continued to feel quite well.

Since the pain transfer was obviously helping out the wife considerably, the husband encouraged the doctor to transfer ALL the pain to him. Thewife delivered a healthy baby with virtually no pain. She and her husband were ecstatic.

When they got home, the mailman was dead on the porch.

If your intention is to operate under Part 15, wouldn't it be a good
idea to actually read Part 15?

http://www.access.gpo.gov/nara/cfr/waisidx_00/47cfr15_00.html

The relevent sections are 15.209, .215 and .227. Emission limits are
not based on output power or final power, but on field strenth. The
limits for intentional emissions for freqs from 1.705 to 30.0MHz are
to be less than 30uV/m at 30m, measured with a CISPR quasi-peak
detector; except between 26.96 to 27.28MHz where the limit is 10,000
uV/m at 3m measured with an average detector. There are other
exceptions, but not on the Citizen's Band.

BTW, CB radio does not operate under Part 15, and 10,000 uV/m at 3m
does not translate to 4 or 5 watts. It is considerably less. You can
get this signal level with nothing more than a one-transistor crystal
oscillator and a short piece of wire for an antenna.

You also need to check other sections of Part 15 as well as Part 2,
because manufactured equipment, modified or not, has stricter
requirements, even when operating under Part 15. You also need to
complete a "certificate of compliance" and attach it to your
transmitter. No, the FCC probably isn't going to hound you if you
don't meet these requirements, but if you want to brag about Part 15
compliance that's what you need to do.

Hello Sparky,
Again this is just something for fun and learning. I don't won't to start a fight, but who do you think the FCC would really go after, the guy running a 1/4 to 1 watt beacon or the guy running 100 watts or more and/or freebanding. At least I'm trying to stay within the normal 40 channels and below 4 watts. Or, how about this idea, I did some looking here on the net. What about using one of those car alarms that run on 27.145(RC Channel) with 4 watts output. I found that radio Radio Shack use to make one and it went to your AM/FM antenna and your wore a pager that went off when the car alarm did. These items was approved by the FCC. Maybe I could find one of these and put it on running on 27.145 with 4 watts out and have it stay in the alarm mode as if the alarm was set off. Again, I'm just poking at ideas and learning at the same time, at least I'm not trying to promote the use of amps or freqs above and below the CB band.

I'm not trying to put you off the idea: quite the opposite. I posted
that information to put you in the right direction. There are many
Part 15 stations operating, and many operators take great pride in
their compliance. After all, isn't the whole point to operate under
Part 15?

You also need to think about why you want to run a beacon. If you are
trying to make DX contacts under Part 15, then cheating really takes
the pride out of those contacts. If you want to run it for learning
propogation, then knowing the technical specifications of your station
is critical.

You might be really suprised how far just micropower can go. Over 1000
miles has been made on the lowfer band where the ERP is just a few
milliwatts. Using slow CW you can sneak your signal right through
someone's audio without being noticed by anyone -- except someone with
the proper software to detect it. And you can detect these signals
almost 20dB BELOW the noise floor! Cool, huh? So when these keyclowns
claim they can step on any mudduck, I tell them I can punch right
through their splatterboxes with a stock radio, and I CAN! Power is
control, not watts.

BTW, it's interesting to note that while there is a DX limitation for
using the CB, there is no such limitation on Part 15 communications.

Now that I think about it, if I were to set up such a station I would probably start with an old crystal rig like the Messenger III. Detuning the driver and predriver should bring down the power as far as needed, but if that isn't enough an attenuator could be added to the line.

The real advantage is that the Mess III has a jack on the back that was intended to allow remote operation, but could also be used for keying (CW) and audio input (AM, RTTY, etc). Setting up an old computer for keying the rig automatically is pretty easy since there are CW and RTTY programs available for just about every computer ever made, even the old VIC-20's and TRS-80's, although it might take a little soldering for the interfaces.

Another option is to take the TX crystal and build a simple oscillator. The advantage here (besides it's size) is that the beacon could be operated from batteries, or even the computer's power supply (after additional filtering). A trimmer cap on the crystal can push the freq off the center of the channel far enough to be distinguishable from CB radio transmissions. Another advantage is that an oscillator can be built by anyone wanting to verify your signal.

The antenna would not be as critical as you might expect, because you can get the maximum signal strength from just about any antenna. But it could make a big difference if you can get it above the rooftops. And since this beacon will be operated automatically, lightning protection is VERY IMPORTANT!!!

Just a few thoughts.

Oh yeah. If you want to make sure your field strength is within Part 15 limits without spending a couple thousand bucks for a CISPR 16.1 compliant receiver, do this: Build a simple relative field strength meter and mark the field strength at 3 and 30m from a known Part 15 device on the same freq. This needs to be measured because while a Part 15 walkie-talkie may say 100mW, that doesn't mean 100mW are coming off the antenna. Don't exceed the marks on your meter and you should be just fine.

3743. Non-Vulgar, Legal, Suggestions Wanted

This is my first post to this newsgroup, and I realize that after reading a few of the message threads that I may be asking a lot (i.e., "non-vulgar" and "legal").

I want to set up my vehicles (e.g., cars, truck) with a cb communication system, and home with a base-station, and I am interested in your views on what type of equipment to get.

I would like to have a set-up for a minimum of 3 vehicles and a base station for not more than a total of $1,500 (which may or may not be realistic).

I am also interested in a suitable unit for taking with me while working on the farm.

I realize that a cell phone might suffice, but I am interested in a greater flexibility.

Communication range limitations would be greatly appreciated.

If you can suggest some web-sites for me to review for additional information, I would greatly appreciate it.

Yea, it just pisses them off, but doesn't change anything. Frankly, the
fact that some of us occasionally "speak up", about the lack of respect
given by illegals toward the rest of the users, it makes little
difference to them. They only care about themselves, and their own
circle of similarly minded friends.

>
> *It counters the illegals claim that "no one cares".

So now they'll just say, "*uck the ones that do."

So now it will be "mostly lawless", and it becomes obvious that the
"lawless ones" control the show, when the agency that is empowered to
enforce the law, is nowhere to be found.

> *Reaction of illegals further expose hypocrisy and ignorance.

That's always been true. It's actually fun to listen to one of them
spin, pontificate, and attempt to justify the reasons why they feel that
they have the right to disregard other people's rights to communication.

True. But don't forget that there are new people getting into the
hobby all the time, as well as many fence-sitters. It is up to the
responsible CBer to set some kind of example for those undecided
operators, showing that intrinsic values such as honor and integrity
have not been made obsolete by a few antisocial malcontents.

>> *It counters the illegals claim that "no one cares".

Probably. Would you expect them to say anything else?

Regardless of what they want to think, the illegals hardly "control
the show". In fact, it pisses them off that they CAN'T control other
people on the radio. If it didn't then they would keep to themselves
instead of disrupting everyone else's conversations.

>> *Reaction of illegals further expose hypocrisy and ignorance.

I hate to admit it, but maybe its time to get yourself a HAM license.
As much as I dislike Aaron, and some of the other HAMS that post on
here, I will have to agree with them on this one. Lots of PSK31 on
VHF, so you can do this without learning code as an
old 11meter jock, I can deal with a person just wanting to talk
without having to get a license, but if you have the know how to get
into other modes, why not just go ahead and get your license.

It should. How would it look to advocate sticking to the rules here in the USA while at the same time taking a "I don't care attitude" about how people abuse the rules in their country. After all the tables can be reversed just as easy, where non US residents advocate breaking FCC rules, so we end up with just the sort of mess 11m has become. What goes around comes around. Remember as a Ham we also have to pay attention to what other operators can and can't do. For example the need to operate split on 40m for DX contacts because the phone bands in different countries don't line up right with ours. Would you not mention to another DX operator if he was violating band plans out of respect and a desire to keep them out of trouble with their local version of the FCC?

Paul:

If you are not interested in talking with others, there are are a couple of
options that come to mind:

1) M.U.R.S.-http://www.provide.net/~prsg/murs_faq.htm

2)G.M.R.S.-http://www.provide.net/~prsg/wi-gmrs.htm

Both of these can be used for personal communications to a range of several
miles.

If you are interested in 27Mhz citizen band radios, there is a myriad of
sites that can be found by doing a search for that info.

Good luck.

The question is if its really that important. As you say if 10m is open than so would 11m. For propagation studies knowing a path exists is one goal, while knowing for how long is another. I would assume if it is of such overwhelming interest that the 10m band, or any other band, would be populated every few hundred KHz with a beacon. However you don't see it. So the conclusion one could draw is a few well placed beacons can provide a great deal of useful information. Having a 11m beacon where 10m H.F. propagation studies have already been done would seem to be a waste of effort.

Agreed. And to tell you the truth, the code test turned out to be a breeze. The hardest part is just making up your mind to sit down and do it. Then once that's out of the way, 28.3 through 28.5 @ 200 watts becomes your "freeband." Add the General written, (35 VERY easy multiple choice questions!) and an avalanche of frequencies (Including ALL of 10-meters!) @ up to 1500 watts becomes your personal playground. You still get to keep the legal 40 and if you're using a RCI-2950 or an HR-2510, you already are 10-meter capable. Just some random thoughts. :-)

These two sites helped me the most.

all radios can be ranger 2950's........antenna can be antron 99 on a
push up pole.........you can find all of this for about $500
used..........no need buying new stuff.......you can get good used
stuff around here and there , if you look.......best thing to do is
get radios with channels so you can get in the freeband
areas.........also think about getting some power at the
base.......sdj is down..............

>
>It should. How would it look to advocate sticking to the rules here in the
>USA while at the same time taking a "I don't care attitude" about how people
>abuse the rules in their country.

Whoa there, Leland. I think that's WAY out of line. First of all, neither you nor I profess to know what the island of Nauru's position is re. a 20 watt 11-meter beacon. So the idea of "how people abuse the rules in their country" WITH REGARD TO THIS ISSUE just died a watery counter-clockwise death down the porcelain funeral parlor. Now even if either of us actually did spend (waste) the time to research Nauru's rules and/or regs re. this, we have no idea as to what their unofficial polocy might be. Sorta like the 155.3 mi. rule. Read about any "skip shooting" busts in the FCC enforcements releases lately? No, me neither. Or how about the infamous Clinton "don't ask, don't tell" policy re. gays in the military? (An analogy I hate to make, but it applies perfectly.) Wtitten rules and actual practiced government policy can be as much as 180 degrees apart. It's not all black and white as some would like it to be.

>After all the tables can be reversed just
>as easy, where non US residents advocate breaking FCC rules

Leland, I work pretty darn hard for the pittance that I make and I pay out a sizeable portion of that in the form of taxes. I hate to sound like John Q. Public, but THIS IS WHAT I PAY THE FCC FOR! Yes the AMATEUR bands are self policing to a degree, but we pay for the "bite." OO cards are merely the "bark." BTW, when you say "non US residents advocate breaking FCC rules"...do you mean like this?:

www.sugardelta.com or www.alfatango.org

>so we end up
>with just the sort of mess 11m has become.

You must mean on the legal 40, Leland because when I took a look at these sites I'm not quite sure that I see the "mess" to which you refer. If you mean the foreign nationals violating their country's communication rules and/or regs re. 11-meter operation, I'd advise you to remember about written rule vs. actual policy. I'm not sure of your travels, but I do have a bit of practical experience re. this. About the only country that I've actually visited and found their ARO's to have the same "hard on" for 11-meter operators (Including freebanders.) as is exhibited here in the US is England. Go figure?!

>What goes around comes around.

Yep, think of what might've been had AR reached out to 11-meter enthusiasts rather than brand them as "chicken banders." Now consider the PHENOMENAL international growth of 11-meters since say, the late 70's. Funny, even some of the ex-freebanders of the mid 80's and early 90's are getting their tickets (Or coming out of the closet.) and showing support for their former stomping grounds. Yeah, I'd say "what goes around comes around."

>Remember as a Ham we also have to pay attention to what other operators can
>and can't do. For example the need to operate split on 40m for DX contacts
>because the phone bands in different countries don't line up right with
>ours. Would you not mention to another DX operator if he was violating band
>plans out of respect and a desire to keep them out of trouble with their
>local version of the FCC?

All this is quite accurate bbut really does not relate to this beacon on Nauru. It's not all cut and dry or black and white, Leland. It's not my grand design or desire, it is what it is though.

Heck guys,

At this point I'll share my plans for using Morse on 11-meters with a Part 15 device. I have a Concept 2000 100mW h/t that I plan on weather proofing and connecting directly to an old NIB AS M-400 Starduster antenna I have. Part 15 requires that I solder the antenna feed directly to the antenna and adjust the output to meet the required field strength. The power and key feed will be routed down to the shack. They say "height is might" so why not take advantage of it. I suppose one could further use an antenna with a better takeoff angle but I have the M-400 on-hand. Best of luck to you.

No, no. All wrong. He needs to uncoil the keyboard wiring, and then check that the keyboard itself is properly grounded. Those magnetic keyboards are real killers, especially on plastic laminate tabletops. Also, the processor speed could be to high. A less powerful computer will work better for him.

From: Phil <pbowles@tnt21.com>
Message-ID: <3c8e3871$0$20730@fountain.mindlink.net>
Source record: 118083

I've hunted around on the internet for information about building my own antenna and I'm left with a lot of questions.

Supposing I wanted to make a 1/4 wavelength cb radio antenna but I didn't want it to be (approx) 1/4 wavelength high, would I be able to coil 1/4 wavelength of feet of wire around a shorter pole and get similar results? My friend did this and it worked surprisingly well, which goes against everything I thought I knew, unless he just got lucky with the length of his coiled wire and got a good fraction anyway...

Other than that bit of confusion, what is a ground plane? Why can a car or ocean be considered a 'mirror image' of an antenna? What purpose does a ground plane serve?

You might have noticed I don't know much about radio, please keep this in mind if you respond.

Thanks.

Phil

Phil, buy a copy of the ARRL Antenna book and use it for bathroom reading. It will take a while but any number of good realizations will occur while worshiping the porcelain god. It is a fun but complex subject.

Your buddy got lucky. It normally takes closer to a half wave (18 ft) of wire than 9.

And listen to Jay in the Great Mojave, he is the resident antenna genius.

Dick NBK

First of all I doubt if anybody knows if operating a beacon on 11m is in
fact legal on this group. Second my whole point is - is it really worth the
effort when the data may already exist from 10m HF propagation studies? So
far the only thing that has been mentioned is the "lenght of time" 11m may
be open v.s. 10m to a given location. However the real question is if there
is a path. That I think has been answered from 10m Ham activity. So my other
question is what can be had using a 11m beacon that can't be had by using a
10m beacon only a few hundred KHz away?

Hey ICE, your brain again shows the effects of all that illegal RF:

Here is a debunk straight from the source. Don't worry, their aren't too many multi-syllable words, read away:

FROM THE DESK OF LTCOL OLIVER L. NORTH (USMC) RET.
NOVEMBER 28, 2001
OVER THE COURSE OF THE LAST SEVERAL WEEKS, I HAVE RECEIVED SEVERAL THOUSAND E-MAILS FROM EVERY STATE IN THE U.S. AND 13 FOREIGN COUNTRIES IN WHICH THE ORIGINATOR PURPORTS TO HAVE RECENTLY VIEWED A VIDEOTAPE OF MY SWORN TESTIMONY BEFORE A CONGRESSIONAL COMMITTEE IN 1987.

A COPY OF ONE OF THOSE E-MAILS IS ATTACHED BELOW. AS YOU WILL NOTE, THE ORIGINATOR ATTRIBUTES TO ME CERTAIN STATEMENTS REGARDING USAMA BIN LADEN AND OTHER MATTERS THAT ARE SIMPLY INACCURATE. THOUGH I WOULD LIKE TO CLAIM THE GIFT OF PROPHESY, I DON'T HAVE IT.

I DON'T KNOW WHO SAW WHAT VIDEO "AT UNC." (OR ANYWHERE ELSE) BUT, FOR THE RECORD, HERE'S WHAT I DO KNOW:

1. IT WAS THE COMMITTEE COUNSEL, JOHN NIELDS, NOT A SENATOR WHO WAS DOING THE QUESTIONING.

2. THE SECURITY SYSTEM, INSTALLED AT MY HOME, JUST BEFORE I MADE A VERY SECRET TRIP TO TEHRAN, COST, ACCORDING TO THE COMMITTEE, $16K, NOT $60K.

3. THE TERRORIST WHO THREATENED TO KILL ME IN 1986, JUST BEFORE THAT SECRET TRIP TO TEHRAN, WAS NOT USAMA BIN LADEN, IT WAS ABU NIDAL (WHO WORKS FOR THE LIBYANS -- NOT THE TALIBAN AND NOT IN AFGHANISTAN).

4. I NEVER SAID I WAS AFRAID OF ANYBODY. I DID SAY THAT I WOULD BE GLAD TO MEET ABU NIDAL ON EQUAL TERMS ANYWHERE IN THE WORLD BUT THAT I WAS UNWILLING TO HAVE HIM OR HIS OPERATIVES MEET MY WIFE AND CHILDREN ON HIS TERMS.

5. I DID SAY THAT THE TERRORISTS INTERCEPTED BY THE FBI ON THE WAY TO MY HOUSE IN FEB. 87 TO KILL MY WIFE, CHILDREN AND ME WERE LIBYANS, DISPATCHED FROM THE PEOPLE'S COMMITTEE FOR LIBYAN STUDENTS IN MCLEAN, VIRGINIA.

6. AND I DID SAY THAT THE FEDERAL GOVERNMENT HAD MOVED MY FAMILY OUT OF OUR HOME TO A MILITARY BASE (CAMP LEJEUNE, NC) UNTIL THEY COULD DISPATCH MORE THAN 30 AGENTS TO PROTECT MY FAMILY FROM THOSE TERRORISTS (BECAUSE A LIBERAL FEDERAL JUDGE HAD ALLOWED THE LYBIAN ASSASSINS TO POST BOND AND THEY FLED).

7. AND, FYI: THOSE FEDERAL AGENTS REMAINED AT OUR HOME UNTIL I RETIRED FROM THE MARINES AND WAS NO LONGER A "GOVERNMENT OFFICIAL." BY THEN, THE UNITED STATES GOVERNMENT HAD SPENT MORE THAN $2M PROTECTING THE NORTH FAMILY. THE TERRORISTS SENT TO KILL US WERE NEVER RE-APPREHENDED.

SEMPER FIDELIS,
OLIVER L. NORTH

Definition of the SuperBowl: A group of morons having a big weenie contest.
If 10,000 CB'er's are on the SuperBowl, drooling and pissing themselves
then only 1000 can be heard some of the times because the others are screaming "AHHHHHDIO!, AHHHHHHDIO!"
& only 100 can be heard most of the times because they are amp using federal criminals.
& only 10 can be heard all the time because they stole broadcast tranmitters and are ALSO federal criminals.
This BULLSHIT URBAN LEGEND PUT OUT BY ICE is a great example why the bowl is for the weak minded!

Have a bit more time now. You have basically two questions and I will take them backwards.

1) Ground plane like a number of things in electronics is a term that conjures up ideas more complex than they really are. If you go down to your local AM teakettle with a daylite only permit you will see the nine-foot whip on a grand scale. The tower at 1200 kHz will be a quarter wave long which at that freq is 62.5 meters or about 200 feet. Beneath it is 120 radials each over 300 feet. And it is built into a swamp.

This is because groundwave is a major propagation factor at that frequency. But as freq rises the 'skywave' is predominant and at CB it is virtually the only factor. And with nine foot quarterwaves it is no longer necessary to ground mount the antenna so we put it on a pole and put out three usually four radials to simulate ground and call it a day.

We do this because if you think about it, a signal needs a half-wave to bounce around in (once going out and once coming back so it does the half-wave twice). The ground plane, in the case of a mobile the car body, is simply the missing quarter wave of the antenna. Now to do what that radial field does for the AM station would be about a 30' circle so it is a fair bet you do not have a perfect ground plane and yes it will make something of a difference but you takes your lumps in a vehicle. Where an antenna is mounted on say a house roof, the proximity of the ground makes a big diff in terms of signals reflected from it and one purpose of a ground plane is to shield the radiating portion of the antenna from the effects of the earth itself. For CB mobile it is sufficient to note that it is important that the antenna system have a good connection to the car, that the various panels of the car are electrically continuous, and that the body is connected firmly to the frame and engine. It helps to be in the middle of the roof but WTH.

2) you are talking about what is called a 'loaded monopole'. The monopole is easy, just one radiating element instead of the two seen on a dipole; gee-whizzy wow. The loaded part means that it is not the nine feet that is naturally resonant at 27 MHz but is dinked with a coil or inductance to make it electrically nine feet without being mechanically nine feet. There are some trade-offs, there aint no free lunch in radio either. You will pay in terms of reduced bandwidth with decent SWR -- efficient antennas are not broad and loading makes it worse. It also introduces some matching problems which are fairly easy to fix.

There are generally three ways to introduce inductance into an antenna. The most common is 'base loading' which as the name implies puts the coil at the base. The problem with this approach is that it is current flow which does most of the radiation and the current is concentrated toward the base so a lot of current is fiddling in the coil instead of producing useful radiation. Putting it in the center radiates better but requires twice the coil for the same length and looks silly in the wind straining the daylites out of the base. The third and the one you have in mind is called 'continuous loading' in which the coil is distributed thruout the antenna producing the familiar rubber duckies on VHF/UHF gear that are known in the trade as helical dummy loads. They work so long as you do not get greedy and the 5 or 6 foot CB antennas work remarkably well.

You can distribute the winding more or less linearly, logarithmically, periodically, or randomly and a lot of people have done all of the above. But the length of wire required varies all over creation so you are not going to find the cookbook solution on the internet. Most of these are done by trial and error using what is called a 'grid-dip oscillator' to determine resonance even tho the GDO uses solid state devices. Sorry.

To match it decently the bottom end of the antenna goes to the ground lug and the coax center is tapped up the coil to get a 50 ohm match. This is a trial and error process as well and a good antenna analyzer helps. Just base feeding would probably never give you better than 2:1 SWR.

There is a lot of sweat time and some test equipment needed to manufacture the things.

Now if you want something bizarre, get a metal Slinky, put it on a pole that is not much smaller than the hole in the slinky and move it up and down for min SWR :-)

Dick N&#65533;BK

Sparky, those receivers are EXPENSIVE. I've used 'em. Cost a couple of thousand buck$ EACH YEAR for calibration alone! I believe the cost of one of the things which covered from near AC line frequency (60 Hz) up to 5 GHz was over $50,000 - and that was back in the mid '90s. Oh yes, you also need a certified OATS site (open area test site). Not cheap. I like your idea of relative field strength with a known legal transmitter. Certainly more in my price range. BTW on your earlier comment about CW (or PSK for that matter) blowing right through a high power am rig - just do the math. A 10,000 watt carrier AM station if fully modulated (100%), has a TOTAL of 15,000 watts - 10,000 in the carrier and 5,000 total between two sidebands. Since you aren't gonna park on the carrier frequency, you are dealing with perhaps a 2.5 to 3 KHz sideband with 2,500 watts spread (unequally) through that range. Throw in a 250 Hz filter to copy the CW and presto - you've lost 90% of the 2,500 watt sideband. The 10% left will try and compete with a single frequency CW signal. CW wins. Oh, you can always use dsp and drop to a 50 Hz filter or so. Um, do you hear the AM station anymore? BTW, years ago a friend (WB2KAO) was over and we were listening to a couple of CW stations chatting. I had an old Johnson Ranger I which was in standby. I just hit a couple of dits - and they stood by for the breaker. It couldn't be me. I was in standby, no plate power, no grid drive, just in standby - on 80 meters and they were in Virginia. Of course I had a several hundred feet of 8 gauge wire up, but geeze. So I sent my call, WB2OSP. Yep, sure enough, now there were three of us chatting on CW - and I got a 579 report too. I certainly was running FAR less than a watt - likely far less than 100 mw at that.

Depending on the placement, width, and pitch of the windings you will
have to vary the length of the wire to maintain 1/4 resonance. You
will always have to increase the length of the wire when coiling.
For example: One typical 6 foot 1/4 wave will have approximately 138
inches in it.

>Other than that bit of confusion, what is a ground plane? Why can a car or
>ocean be considered a 'mirror image' of an antenna? What purpose does a
>ground plane serve?

It completes the antenna. Without it your 1/4 will function very
poorly. The basic antenna, a dipole is 1/2 wavelength long. A version
of this dipole is a 1/4 wave with a 1/4 wave perpendicular ground
plane. Ideally the ground plane should also be 1/4, however if you can
get a larger ground plane then it's potential is even better.

Paul, Randy's reply looks like a good bet to me. Unfortunately, you might have some experiences which may be less than pleasant if you try 27 MHz CB. A friend of mine with a construction business bought a bunch of 27 MHz walkie-talkies to use on construction jobs (his requirements were only several hundred feet at most). The first time out, some CBer told him that CB wasn't for business and was a hobby band! Not true, of course, but I think you will be happier with the suggestions Randy has for you in his reply. Use for business (the farm) would, of course, preclude using amateur radio.

Excellent evaluation, James. I think the current standard for coherent
CW is 31 Hz -- that doesn't leave much left of their "bird watts",
does it?

Of course due to the changing MUF as you pointed out before. However that is not the whole picture either. The second reason for doing propagation studies is to see if a path exists. Along those lines I think that the 10m work has proved that point without the need to repeat it on 11m.

Yes Bert, and how many times have I said as much too? Nobody here has any
idea what the legal ground is there for operating such a beacon, and so far
nobdy has answered that question yet either. You would think the logical
thing to do is find that out first before going out and really doing it
don't you?

> >when the data may already exist from 10m HF propagation studies?
>
> Not always true. The key word here is "may."

I provided several links to Tim where such work has already been done to one
degree or another. So the question is no longer "may" but are people going
to ignore the data that has alredy been collected?

> Surely you jest. Leland, have you ever sawed open a golf ball just to see
(for
> yourself, I mean) what's inside?

I'll bet you I can saw a golf ball in half for a lot less money, and in a
lot less time, than it would take you to fly out to that island and set up a
beacon. Get real Bert.

> How about doing something that can be more
> easily answered through the research of others...just for the personal
> satisfaction of having done it "on your own?"

Now if that was a stated goal, which I don't recall seeing in the original
post, then you would have a good point.

i've done the same on the upper portion of 25 megs with a 2510 on fm mode with the power turned down as low as it possibly can go, i'm in TX and there in KY. it would barely make the needle flinch on a 10 watt scale. those contacts are cool. not too long ago i worked a guy in germany with him running 5 watts and me running 10 and we both had half wave verticals. it was 5/5 on 27.580 for about 30 minutes or so till the band changed up on us

Two west Texas boys, Bubba and Cooter, decided that they weren't going anywhere in life and thought they should go to college at A&M to get ahead.

Bubba goes in first, and the professor advises him to take math, history and logic.

"What's logic?" asked Bubba.

The professor answered, "Let me give you an example. Do you own a weed-eater?"

"I sure do," answered Bubba.

"Then I can assume, using logic, that you have a yard," replied the professor.

"That's real good," Bubba responded in awe.

The professor continued: "Logic will also tell me that since you have a yard, you also have a house."

Impressed, Bubba shouted,"AMAZIN'!!!!!"

"And since you own a house, logic dictates that you have a wife."

"Betty Mae! This is incredible!" Bubba is obviously catching on.

"Finally, since you have a wife, logically I can assume that you are heterosexual," said the professor.

"You're right! Why that's the most fascinating' thing I ever heard of. I can't wait to take this here logic class."

Bubba, proud of the new world opening up to him, walked back into the hallway where Cooter is still waiting.

"So what classes are ya taking?" Cooter asks.

"Math, history and logic," replies Bubba.

"What in tarnation is logic?"

"Let me give you an example. Do ya own a weed-eater?"

"No."

"Your a queer, ain't ya

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

3807. Software problems (for women) (OT)

Newsgroup: rec.radio.cb
Date: 2002-03-13 01:55:08 UTC
From: arcweb@bnnorth.net
Message-ID: <3c8eb108.708022@news.bright.net>
Source record: 118120

Dear Tech Support:
Last year I upgraded from Boyfriend 5.0 to Husband 1.0 and noticed a slowdown in the performance of the flower and jewelry applications that had operated flawlessly under the Boyfriend 5.0 system. In addition, Husband 1.0 un-installed many other valuable programs, such as Romance 9.9 but installed undesirable programs such as NFL 7.4, NBA 3.2 and NHL 4.1.

Conversation 8.0 also no longer runs and Housecleaning 2.6 simply crashes the system. I've tried running Nagging 5.3 to fix these problems, but to no avail. What can I do?

Signed,
Desperate

****

Dear Desperate:
First, keep in mind that Boyfriend 5.0 was an entertainment package, while Husband 1.0 is an operating system. Try to enter the command C:/ITHOUGHTYOULOVED ME and install Tears 6.2. Husband 1.0 should then automatically run the applications: Guilt 3.3 and Flowers 7.5.

But remember overuse can cause Husband 1.0 to default to such background applications as Grumpy Silence 2.5, Happy Hour 7.0 or Beer 6.1.

Please remember that Beer 6.1 is a very bad program that will create SnoringLoudly.WAVfiles.

DO NOT install Mother-in-Law 1.0 or reinstall another Boyfriend program. These are not supported applications and will crash Husband 1.0. It could also potentially cause Husband 1.0 to default to the program: Girlfriend 9.2, which runs in the background and has been known to introduce potentially serious viruses into the Operating System.

In summary, Husband 1.0 is a great program, but it does have a limited memory and can't learn new applications quickly. You might consider buying additional software to enhance his system performance. Ipersonally recommend Hot Food 3.0 or Single Malt Scotch 4.5 combined with such applications as that old stand-by...Lingerie 6.9 (which has been credited with improved performance of his hardware).

Good Luck,
Tech Support

Maybe he needs to take the advice of the B.O.F.H. the CPU is froze, to
loosen it up, liberally apply a lubricant such as some heavy duty
transmission fluid, then after applying the lubricant, he needs to
break it free by repeatedly turning the machine on and off repeatedly
for 10 minutes followed by bouncing it off the floor a few times to
really work it loose.

And for those who are not familiar with the wise ways of the B.O.F.H.
he is the Bastard Operator From Hell. Simon Travaglia wrote these
humorous accounts of a fictitious sysadmin. For the
computer/linux/unix geeks out there like myself, his writing always
cheers me up after a hard day.

Oh, Admirable, I guess. I am for anything that keeps them out of 10 meters and I am told that most major trucking companies have gotten these letters as the postage budget permits and addresses become available.

But I still have a soft spot in my head for these guys whose main aim in life is to stay awake, talk with friends, and not be QRMed by every channelmaster in East Beartooth and pestered by every Truckstop Annie and Andrew in existence. I know all is not peaches and cream, there is a Texas trucker who will see more of Nebraska than he bargained for as a result of a manslaughter conviction stemming from a Channel 19 fight at a local reststop. But by and large I think the solution is an FM setaside somewhere with goofy channel spacing and funny PL tones.

The pressure will simply move from 10 meters to somewhere else.

There are problems with regulatory and engineering solutions that do not submit to some 14 year-old girl chirping 'Illegal, Illegal' at every opportunity.

Did something change? IIRC, you cannot conduct business on 27 either. That
being said, I don't think Paul's application would be out of line at all.

I seem to recall that in it's earliest inception, cb WAS meant for private business activities.

Certain channels were for base to mobile..business..between units of the same licensee and others were set aside for base to base operations.

One was set aside for emergency traffic.

Oh and a few were set aside for remote control of devices. Those were the A & B ch.'s.

3819. Beacon on CB Band

Newsgroup: rec.radio.cb
Date: 2002-03-13 06:21:05 UTC
From: mybigcb@aol.com
Message-ID: <20020313012105.21318.00001409@mb-mq.aol.com>
Source record: 118130

Ok, I'm just wondering here, so I don't want to start a e-mail fight or a newsgroup fight. But how come is it if a CB'er wants to put a 1/4 to 1 watt beacon up, and learn from it, so many hams get mad. I would think this would be a good stepping stone into the ham area. So many people are just plug and play. If I want to learn a little about low power beacons by building and running one with-in the 40 channel CB band whats the problem? It's not like I'm putting it outside the 40 or even in the ham bands and running lots of power. We are only talking 1/4 to 1 watt here. Along the way I'm learning 555 timer stuff, and let's not forget CW, because thats what I will be using for the id of it. Maybe I will enjoy this enough and I will want to get a ham ticket, then I could use what I learned and put it towards use in the ham bands. Let's say just for topic, that I do put this beacon up and it can be heard but a beacon on 10 meters can't be heard and both are coming from the same town. What would this tell us? From what I've read so far, it would tell me that the MUF is moving up or down depending on the time of day or the gray line. From the many private emails I've gotten they are mixed. The ones from what appears to be CB'ers are all for the project, the few I got from hams(I know they are hams as they gave a call sign) say don't do it, get a ham ticket then do it. I never really understood why so many hams really care what goes on in CB from channel 1 to 40, I can see them upset with the freebanders and guys running big power, but a guy wanting to run 1/4 to 1 watt well within the 40 channels. As for the beacon, I went to radio shack and got a 555 timer ic and parts, also found a nice book there on 555 projects. So I hope to have the timer built this week, then I move onto the CW stuff. Again like I said above, I'm learning from this and I'm having fun doing it. How many others could really do this?

Ok yes you can put A 2SC2312 in place of the 2SC1969 but the power supply in the radio can't help it in any way , if it were set up correctly it would perform just fine . the Bias of the driver and final are most important and should be observed . I have found that the power supply isn't wired correctly you may want to look at that ,I have done quite A few of those and I can tell you that this is accurate.

Hi Paul it depends on how far you want to or have to talk and stay away from those 2950s they will be in the repair shop more then in your use . The use of radios in the CB area for farm I am sure would be legal it's not like your trying to sell stuff or entice people to buy or purchase something so what you get from this newsgroup should be taken with A SALT .

I don't think anyone would complain if you wanted to run Part 15, but
it just ain't kosher to set up an automated, 24/7 beacon using power
that could hog the channel from your neighbors.

> and learn from it, so many hams get mad. I would think this would be
>a good stepping stone into the ham area.

Sheesh, how hard is it to get a ham ticket? Really? I mean, there are
so many people claiming that they need a "stepping stone" from CB to
ham, and I have to ask why? Is the test that hard? Does it cost too
much? What am I missing here?

>So many people are just plug and play.

That's kinda what CB is supposed to be. The Citizen's Band was created
for the casual user, not for radio and electronics experimenters.

>If I want to learn a little about low power beacons by building and running one
>with-in the 40 channel CB band whats the problem? It's not like I'm putting it

You are starting to sound like the keyclowns: "Hey, I'm just running
100 watts here, not like I'm using any -real- power..."

> Along the way I'm learning 555 timer stuff, and
>let's not forget CW, because thats what I will be using for the id of it. Maybe

>or down depending on the time of day or the gray line.

Very good idea. If you look back on my previous post you will see that
Part 15 covers the same field strength from 1.705 to 30MHz, so you
could set up several beacons over a very wide (or very narrow) piece
of HF spectrum. Or maybe make one beacon that switches crystals every
few minutes. Cool idea.

> From the many private

You have my support as long as you play by the rules.

> I never really
>understood why so many hams really care what goes on in CB from channel 1 to
>40, I can see them upset with the freebanders and guys running big power, but a
>guy wanting to run 1/4 to 1 watt well within the 40 channels.

For the hams I don't think it's just the power but also the continuous
and automated operation. Just a handful of these beacons running near
normal power can lay waste to a large section of any band. That's why
automated operation is sometimes prohibited, as it is with CB. Part 15
circumvents these restrictions because of it's low power limitations.

> As for the

More than you think.

If you have noticed, Biggsie, the only ham with a problem is a Tech not licensed for 10 meters anyway. Some may think it mildly useless, I am not a beacon fan anyway, but those of us in a position to have an opinion by and large do not give a healthy hoot.

Aaron, is this really something you wish to brag about. I personally would like to see much stricter enforcement against 10-meter intrusions, but this really isn't what I had in mind. Do you mean to tell me that a real live FCC field agent (Complete with badge and a a warm pulse.) puposefully went to a truckstop, EYEBALLED these so-called "no-no" rigs, (Your favorite "friendly" ebay letter?) and then waved his index finger and said uh, uh, uh! A WARNING!!! Now if the entire store stock had been confiscated, then you'd be saying something.

I think you could too. I'm personally not motivated to fly out to that
island to activate an 11-meter beacon. But I certainly won't put down
or harang anybody else who is.

You asked (more or less) what useful purpose it could serve. I (Not
the original poster.) offered one. Take it easy, Leland.

73 de Bert
KC2HMN

P.S. Actually, this whole discussion kinda reminded me of an
encounter I had at a local Radio Shack back in the early 80's. I
accompanied a friend who wanted to pick up some coax. He was more than
satisfied feeding his base antenna (Big Stick, I think?) with
RG-58A/U. Upon completion of the sale, the store clerk turned to me
and asked if I'd be interested in purchasing some RG-58A/U. I thanked
him for his offer and informed him that I preferred something a bit
more substantial in the coax dept. The clerk asked me what coax I
used. I replied that I used Belden 9913 with a homebrew 2 el. quad.
(Actually a delta loop) Well, another customer at the counter
identified himself as an ARO and literally grilled me on why I was
putting so much effort into my CB signal. "RG-58's plenty enough for
those 4 watts!" He wouldn't even acknowledge that I used SSB
exclusively with 12 watts. It was the strangest phenomenon that I'd
ever seen. So what if I used silver/teflon PL-259's and a W2DU 4:1
balun to feed the driven element, right? WRONG! ("RG-58A/U and
crimp-on connectors are good enough for you.") This guy got absolutely
livid. I nicely explained that I wanted to recoup any losses I
possibly could. If that meant researching delta loop dimensions,
measuring twice and cutting once on my homebrew special, using the
highest quality stuff I could lay my hands on...then so be it. Even
the store clerk (Asst. Mgr. actually and also a ham) was amazed. So if
I appeared to be curt with you at any point in this thread, it was not
meant to be. For a moment, your comments just reminded me of this
condescending dufus. Besides, eventually I met a ham who said "cool,
now why don't you try that on 10-meters? I'll give you a hand getting
there." I think you know the rest. Again, take it easy. :-)

I think the people responding to my comments miss the point. I simply question the expense of the time, money and effort when the data already seems available from 10m operations out of the same location. The original post starting this thread did not say if the proposed beacon experiment was being done simply for "grins and giggles" or if that poster was unaware that similar data already exists from Ham 10m work there. I can't see why some people can't get that simple idea through their head instead of trying to turn the whole discussion in to an "us v.s. them" confrontation.

the guy is going to Nauru on vacation and he also happens to be a 11 meter hobbyist. he's going to work as many stations as he can via voice and then set up the beacon for 11 meter propagation studies to the island. its all for fun but for all your talk about proof you provided leland i failed to see you show any info of a 10 or 11 meter beacon being on Nauru during this cycle. as you may or may not know the HF bands are changing from day to day so a beacon experiment from several years ago isnt as usefull as your 5 year old repeater studies on 2 meters may be so current info is by far the best info. if you wanted to know the guys motives so bad perhaps you should have emailed him drectly to australia to inquire about them. what i posted was simply a relay of the message i got.

>
>I think the people responding to my comments miss the point. I simply
>question the expense of the time, money and effort when the data already
>seems available from 10m operations out of the same location. The original
>post starting this thread did not say if the proposed beacon experiment was
>being done simply for "grins and giggles" or if that poster was unaware that
>similar data already exists from Ham 10m work there. I can't see why some

10 watts erp is the limit. what type antenna will you be using TIM? If someone uses a 4 element beam any idea what his power output should be to get 10 watts ERP.

Dear Randy:

I have put up with your negative comments for over a year now...without thinking that your childish remarks needed any reply.
I think everyone is welcome to their evaluation and comments, BUT when it comes down as outright SLANDER, then you are talking about another thing.
IF YOU WILL REMEMBER in our original deal that I OFFERED to help in the cost of getting the amp repaired, even though YOU yourself said that YOU might have damaged it, by dropping it.
YOU chose to sell the amp on your own, WITHOUT even advising me of the cost of any repair OR even contacting me before you sold the amp.
As I had told you from the very beginning I am not a tech, that I had spent over $400 getting the amp repaired before sending it to you, and it WAS working fine when it left here....The unit was insured 100% against any damage in shipping but YOU chose not to file a claim. Could that be because of your admitting that you yourself had damaged the unit??
Let me make one thing perfectly clear to you, I DO NOT knowingly sell defective equipment or tubes....I have everything checked before offering it for sale....I go out of my way to satisfy customers and in most cases I will do more that most people would, just to make sure the customer is satisfied.
I GLADLY did the same in your case; which I did agree to help in the cost of repair to the amp which 1)was working fine when it was shipped 2)you yourself admitted that you dropped the amp. But there is no way you can expect me to pay you anything when you 1)NEVER asked me for a money regarding the repair 2)Sold the amp
I know that all deals can not come out acceptable to everyone 100% of the time but I think that my reputation will speak for itself, I welcome you and others to view unsolicited feedback comments on EBAY with my screen name **thetubeman**.
This tube and equipment business I have been in for many years, and we both know that a person can not remain in business and grow if they treat their customers unfairly. And this transaction would have turned out much better if you had of handled if in a different manner.
ALSO, even though the unit had 2 good tubes when it left here, you said the tubes were bad, I sent you THREE new tubes asking that you return the 2 'bad' ones along with the extra one that I sent...you did not do that....if fact you wrote me a Email saying "I hope you don't expect to get those tubes back". This was an additional $270 that I spent to satisfy you.
Then I agreed to help with any cost of repair, which you never asked for, and finally you sold the amp without contacting me first. And you have posted unjustified negative comments on the internet for over a year. All of which I have overlooked.
Slander is a different thing. I would respectfully request that you cease

your slanderous statements. There is a difference between negative opinions
and slander.
Randy, I am truly sorry that you are unhappy with the deal which transpired
all most 2 years ago but I think that I did more than my part in trying to
make you happy.

Sincerely

Richard Hale

Modulated CW is using a tone generator to make the dits and dahs, feeding
the output of said tone generator into the mic or line input of a
transmitter and using FM, AM, or SSB to transmit it.

I didn't think it was that hard to understand.

Wouldn't that depend on the dB gain of the beam in the forward direction?

I'm not arguing that it _began_ as such, just that it is not now. I thought
I remembered reading that using the 27mhz band for personal business was not
allowed.

Anyway, as a few others may need/want to, I'm going to re-read the regs.

Couldn't hurt. :-)

Why not look into the FRS band with its low cost. If that will not work
look into the grs talkies. Or go to Home depot and look at the Jobcom, motorola
radios or equ. Lisence free, One watt output, high band, PL tone.

When you read the rules note that there are two ways to read and write them. You can take it like the Form 2 Homeowners and give a list of covered perils or like the Form 3 which says everything except a list of non-covered items.

I think a fair paraphrase of Part 95 is that all uses are legal except where radio itself is the object of the exercise. Personal jabberjaw, business, fine -- hobby use, non. Take it hunting, take it camping, take it motoring, any human activity where radio helps it, just not where radio

is the activity in question.

And it really hasn't changed in 45 years.

3851. FS: MILITARY 6V3A rectifier tubes

Newsgroup: rec.radio.cb

show

Those links were not for any beacons. However if you took the time to look
you would have found those groups had in fact operated on 10m. For all
practical purposes that works out about the same as a beacon.

> any info of a 10 or 11 meter beacon being on Nauru during this cycle. as
you
> may or may not know the HF bands are changing from day to day

All the bands change from day to day so you're not telling me anything new.

I think the people responding to my comments miss the point. I simply
question the expense of the time, money and effort when the data already
seems available from 10m operations out of the same location. Too bad some
people can't take my comment at face value without trying to read more in to
it.

> Wouldn't that depend on the dB gain of the beam in the forward direction?

As far as Ham QRP operations goes ERP gain is not a limited factor. The only thing that counts is the power out of the rig, not ERP, and how effectively it gets used. If somebody can feed 10 watts in to a 30db gain antenna, well more power to them. For a CB style QRP contest I would think the same rules should apply. Using those rules would encourage the operator to maximize the efficiency of their station, i.e. get the best antenna up you can, and feed it with the lowest loss line you can afford that makes sense. The rest boils down to just how skillfull of an operator the person is, which makes the final difference.

Bert,

First of all, it is, of course, not illegal for John Q to purchase or own an FT 840. I am hearing, tho, that these so-called "export" and *some* so-called "10 meter" radios are getting attention because they aren't legal to sell to start with. They either don't meet certain requirements, and/or they put out too much power. A legal 10 meter radio that is difficult to mod, add "channels", or convert to the CB 40, wouldn't get that sort of attention. This is only a part of the crackdown I've been hearing Mr. H speak of at his forums--the same crackdown that I got laughed at and flamed for mentioning previously. I was only trying to alert people that things would change, and they seem to be doing just that. I'm even hearing that the Feds are going to start taking a hard look at radios that come into our ports, etc. under the guise of "10 meter" radios. They already have a list of what's not kosher radio-wise, and those radios on that list will be confiscated. For example, if you have a so-called "10 meter rig" that has a frequency display AND "channel" positions--that's not allowed. Real 10 meter rigs have the frequency readout only and may have programmable memories to save one's favorite frequencies in.

My own take is, if the so-called outlaws, or "freebanders", whatever, had stayed within the 40 channels, or very close to them, they might not have even attracted attention. I don't even care what they do down on channel 6 because, so far, it doesn't bother me. When they start getting up into the 10 and 12 meter bands where they don't belong, then I will record, document, and report what I see and hear. And that includes turning in truckers that are operating on "channel 19, 2 up".

Keeping the power limited to 10 watts PEP on sideband is perfectly legal. Part 95 allows 12 watts PEP max on the legal 40. So along those lines he's playing by the book. That is also the same definition of QRP power even on the Ham bands for SSB if I remember right.

If he wants to advocate operating outside of the band etc. Yeah then you have a point too.

Jeff,

CB radio is still intended as a short distance, personal business AND
business use medium.
To be sure, it HAS become a "hobby", but, according to the regulations, it
is NOT intended to be used that way. Your use on the farm as a short range,
economical comm method is
certainly legal--far more so than the "leenyars", freebanding, and
jabberjawing that occurs
there. I surmise that the "myth" of CB being a LEGAL hobby band came about
as an attempt to legitimize and justify the above activities. Yes, it became
a "hobby" band, but it
was, and still isn't, intended that way.

I Agree with Randy

Use MURS or GMRS.
The MURS band will have more range .
I would not use CB for any personal use, when the skip is in Its hopeless.

Well my 706MKIIG requires that only a couple of chip diodes be moved to open
up all of the H.F. frequencies for transmit.

I think there would have to be something else, and I think that would be
that the rigs are simply 10m ONLY rigs.

> For example, if you have a so-called
> "10 meter rig" that has a frequency display AND "channel"
positions--that's
> not allowed. Real 10 meter rigs have the frequency readout only and may

So what would you think about my 706 then? I have all of the CB channels programmed in to it for monitoring purposes only, the same as I have for all 14 FRS and 5 MURS frequencies too. The rig displays the frequency, and I have the frequency identified by channel number, using the alpha numeric memory name ability built in to the radio. That would be about the same as what you mentioned is a no-no, i.e. a frequency display and a channel number.

There has to be some other reason the FCC has specific radios on their hit list. Some of the things you mentioned are common with rigs the FCC does not consider a problem. Is there any way you can find out for sure exactly what the FCC is looking for?

I suppose over the years lots of CBers were 'condescended to' by hams
in the same way high school freshmen were 'condescended to' by senior
classmen. Some CBers took it personally. Others realized that CB was
never designed to be the equal of ham radio. It wasn't even designed
to be the stepping stone to it. If someone was seriously interested in
'radio' as a hobby they got on the path to acquire a novice ham
license. So look at it this way: to the the store clerks it made as
much sense as buying gold-plated wire and connectors for a crystal
set.

>
> http://www.TimNebo.com

Here's what they say on the website:

=========
The call frequency for the contest will be 27.507USB
For QSO use 27.508USB every 1khz 27.509;510;511ï¿½..up
to 27.550USB!!
There are just a couple of rules.
The max. output power for the contest
is 10Watts(ERP)!!!
We hope all operators will not tx with more than 10Watts.
==========

Hmmmm - will a person who knowingly uses illegal frequencies abide by
contest rules? I doubt it.

Hi Jerry,

Quite truthfully, I hope it never becomes illegal for John Q. to purchase an FT-840. (More on this rig later in this post.) I'm hoping Santa Spouse will reward an ARRL 20-wpm Code Proficiency Certificate with an IC-756PRO II. (Or perhaps the IC-746PRO II...I never said I wasn't greedy.) Heck, by that time my XYL should have both a KC2 AND a HC2 prefix callsign. I'll be picking up a HC2 call too later this year.

>I am hearing, tho, that these so-called "export" and *some*

This is good to hear. I only hope it really does curb the 10/12-meter intrusions.

>This is only a part of the crackdown I've been hearing Mr. H
>speak of at his forums--the same crackdown that I got laughed at and flamed

>"10 meter rig" that has a frequency display AND "channel" positions--that's
>not allowed. Real 10 meter rigs have the frequency readout only and may
>have programmable memories
>to save one's favorite frequencies in.

Back to the FT-840. It's a "soft" mod rig. That is to say that it can be modified without ant diode clipping or soldering any jumpers. Arguably, the most legendary "freeband" rig; the FT-757GX was 11-meter enabled with the flip of a microswitch. Whether you call it "MARS capability" or "extended transmit capability," frankly..."it don't come much easier than that!" I run a President Lincoln on 10-meters and would not like to see it on the FCC endangered species list. (But I think it's already on their ebay "verboten" list already, along with my beloved AR-3500.)

>My own take is, if the so-called outlaws, or "freebanders", whatever, had
>stayed within the 40 channels, or very close to them, they might not have
>even attracted attention.

Agreed. I personally don't give a hoot about anybody running a "clean" 30 watts on the legal 40 or the lower "freeband." Some may or may not like this position, but it's mine...no apologies. In the absense of Utopia, I'll take the lesser of two evils. "Kilowatt Charlie's" gotta go!

>I don't even care what they do down on channel 6
>because, so far, it doesn't bother me.

This is where we start to part ways. I still am an 11-meter enthusiast. When "Kilowatt Charlie" parks on ch. 6 with a X-Force or a Davemade class C monster driven by a $69.95 AM only splatter-box with the audio limiter "clipped," it "BOTHERS" me. I'd like to say that I carry around a quarter just for the call to "Uncle Charlie," but quite frankly it's bad enough that their getting a slice of my tax dollars so I'll be damned if I'm gonna waste my spare change on them too. (I know the CB is not Riles' gig.)

>When they start getting up into the
>10 and 12 meter bands where they don't belong, then I will
>record, document, and report what I see and hear. And that includes turning
>in truckers
>that are operating on "channel 19, 2 up".

Agreed 100%. Alright, so maybe I've wasted a couple of quarters already. Have you spoken with a representative of the FCC lately? I have...it's almost enough to make me want to not file my income taxes. (if I weren't gettin' $ back, that is.) Take care, Jerry. I hope you enjoyed the rare "Bert rant mode=on" moment. It's all meant in good spirit. :-)

If that only applied to everyone, you might have a point, Aaron. But, once again...you can't speak for anyone else but yourself. And from the looks of the phenomenal growth of 11-meter "hobby" radio over the last 15 years or so, I'd say there are quite a few <million> who'd disagree with your assertion. Take it easy, Aaron.

Tim, Are you going to take part in the Contest? I got some ideas to
eliminate lost power, this should help minimize your losses hook your radio
up with a double female right to the bottom of the antenna no feedline
losses so you may have to sit on the roof during the contest.

I never said it wasn't. Maybe I should make some clarifications:

The discussion was pertaining to operation under Part 95 (CB rules).
This kinda goes back to the definition of CB. The Citizen's Band isn't
just the frequencies, it's the use of those freqs with the power,
mode, operation and equipment limitations. If it doesn't meet those
requirements then it isn't CB.

CW and tone-modulated telegraphy is not permitted on CB. Beacons are
not allowed, either. But transmissions using those methods are allowed
on the same freqs under Part 15, which is one of the possibilities the
original poster had raised. Therefore, a beacon on 27.205MHz operating
under Part 15 isn't a CB radio -- it is a beacon on 27.205MHz
operating under Part 15.

BTW, telegraphy is allowed on most of the ham spectrum, but it is very
limited elsewhere.

I would hazard a guess here and say that it operates under Part 15. CB freqs have frequently been used for license-free walkie-talkies. Some are advertized as CB radios and some are not, but if you check the FCC tags on the back of these devices you will find that they are not classified as CB radios, regardless of how they are marketed.

But you bring up a good point. I'm not sure about this, but CB radio may have allowed CW in years past. Maybe Dick could answer that one.

With all due respect, these tubes are cheap when new unless you are looking at nos Russian tubes. Beyond that, many folks tend to overdrive them so the life is shortened--hence a good used 811a is something of an oxymoron. Buy a new set.

Noop. Not to say that it was not done both in legal and upper channels
but it was usually A2.

After reading about some of these Part 15 stations, that's not such a
bad idea. A few of them have made full use of limited antenna size by
mounting the transmitter right on the antenna, then use fiber optics
for audio and/or control signals.

Yeah Frank, they're Part 15 devices alright. Definitely not CB's, despite
operating on CB frequencies. (Most came equipped for ch. 14 or 27.1250 MHz.)
They get the job done though. Take ite easy now.

I want to set up my vehicles (e.g., cars, truck) with a cb
communication system, and home with a base-station, and I am
interested in your views on what type of equipment to get.:

i would say to get some "frs" radios. i bought some and really like em. they
are quiet and talk out pretty far. i use em out in the woods and they will
reach out even during the day. unlike cb radios with all the skip goin on
during the day.

Exactly what I was thinking Sparky, with only xx amount of watts available
everything counts.

> the FCC is looking for?

It's just common sense. The FCC is looking for radios that are
intended to appeal to (and be sold to) illegal freeband ops.....

FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and
forfeiture.--FCC

ï¿½

I've seen 4 element beams that only rated 5 dBi, and some that rated 12 dBi.

Picking the "generic" 4 element beam is pretty pointless. In other words, there's no point in debating it. Each beam design is different, and each has different characteristics, beamwidths, F:B ratios, lobe plots, and gain.

If you'd care to pick a specific beam, whose specifications are on the web, we might be able to calculate how much power in to get 10W ERP. You can't do that with any accuracy on a "let's suppose" antenna, because there are too many unknowns.

SSB, I gave you the specs a 10db gain beam why are you having a problem with
this? What 4 element yagi beam shows 5 dbi of gain? and which one shows
12dbi of gain. Could you be more specific since you sidestepped the rest of
the questions or you didnt find the formula for erp yet ?

It also seems strange to state the power limit as "ERP", and not the rig's
output power. As far as abiding by the contest rules I doubt most CBers have
any way to check that they are not breaking the "ERP" limit anyway.

I get the Idea Aaron. It does sound like the laws we have about porno, the
often stated - "I know it when I see it" test. The problem will be
identifying the rigs when they are imported. I can see the manufactures
playing games where they change the design enough to meet current FCC rules,
then with a cheap after market widget add-on, you're right back at square
one again. About they only way to stop that kind of nonsense is to open up
the box and fill it up with epoxy. I have seen this done with TV cable
decoders to keep hackers from messing with them so doing it with a 10m
import rig it not out of the question. Last but not least what is to stop
freebanders from just using the cheap non modifiable 10m rigs as is on 10m?
You get enough of them doing it and its going to be real hard to catch them
all. The reason I brought up the last point is the fact their is already a
problem with intruders on 10m, and they are there because either they don't
know they are in the Ham band, OR they know and don't care.

>
>I have put up with your negative comments for over a year now...without
>thinking that your childish remarks needed any reply.
>I think everyone is welcome to their evaluation and comments, BUT when it
>comes down as outright SLANDER,

Slander ??? You sold me a junk amp and I told everyone about it and am going to
continue to tell everyone about it.

then you are talking about another thing.
>IF YOU WILL REMEMBER in our original deal that I OFFERED to help in the
>cost of getting the amp repaired, even though YOU yourself said that YOU
>might have damaged it, by dropping it.>

LETS CLEAR THIS UP RIGHT NOW. SEND ME THE MONEY (THAT YOU NEVER AGREED TO)
FOR THE REPAIR WORK AND I WILL STOP POSTING THAT YOU SOLD ME A JUNK AMP THAT
DIDN`T WORK PROPERLY !!!!!!!!!!!!!!!!!!!!!!!!!!!!
You told me that your tech tuned and repaired it. I rememeber saying that I had
to drop in 2 or 3 inches to get it to do anything. Cold solder joints, lousy
tech work I dunno. THE AMP WAS NOT EVEN WIRED PROPERLY !!!!!!!! You tell me. I
wanted my money back and got no response from you. I had the amp repaired and
then asked you for my money back and you could have the now working amp back.
No response again !!!!!!!!!!!!!!

YOU chose to sell the amp on your own, WITHOUT even advising me of the cost
>of any repair OR even contacting me before you sold the amp.

BULLSHIT !!!!!!!! I PAID YOU FOR A PIECE OF SHIT THAT YOU TOLD ME WAS A 9 OUT
OF A POSSIBLE 10. I SOLD THE PIECE OF SHIT BECAUSE I WAS EMBARRASSED TO OWN IT
AFTER I HAD IT REPAIRED !!!!!!!!!!!! JUNK SHIT !!!!!!!!!!!!!

>As I had told you from the very beginning I am not a tech, that I had spent
>over $400 getting the amp repaired before sending it to you, and it WAS
>working fine when it left here....The unit was insured 100% against any
>damage in shipping but YOU chose not to file a claim.

FILE A CLAIM ?????? THE FUCKING THING WAS JUNK AND IT WASN`T WIRED PROPERLY
!!!!!!!!!!!! HOW THE FUCK WAS I SUPPOSED TO FILE A CLAIM ????
DID YOU EVER EVEN SEE THIS AMP ??? IT LOOKED LIKE A PIECE OF SHIT AND IT WAS A

PIECE OF SHIT !!!!!!!!!!
I am a manufacturers Rep. I ship motor freight, UPS, Fed Ex, Emery and DHL all the time and have filed claims with a lot of these carriers. I couldn`t file a claim with this piece of shit. They would have turned around and walked right out of my office and laughed about it all they way back to their office.

Could that be
>because of your admitting that you yourself had damaged the unit??

Hell, I couldn`t have made it any worse. It wasn`t wired properly and didn`t work when I got it.....

>Let me make one thing perfectly clear to you, I DO NOT knowingly sell
>defective equipment or tubes....I have everything checked before offering
>it for sale....I go out of my way to satisfy customers and in most cases I
>will do more that most people would, just to make sure the customer is
>satisfied.

BULLSHIT !!!!!!!!!!!!!!

>I GLADLY did the same in your case; which I did agree to help in the cost
>of repair to the amp which 1)was working fine when it was shipped 2)you
>yourself admitted that you dropped the amp. But there is no way you can
>expect me to pay you anything when you 1)NEVER asked me for a money
>regarding the repair 2)Sold the amp

BULLSHIT !!!!!!!!!!! I ASKED YOU FOR MY MONEY BACK AS SOON AS I RECEIVED IT WHEN I OPENED THE BOX IT CAME IN, AFTER I TRIED IT, AND AFTER I HAD IT REPAIRED !!!!!!!!!!!! WHERE WERE YOU THEN ???????????

>I know that all deals can not come out acceptable to everyone 100% of the
>time but I think that my reputation will speak for itself,

Yeah, you are right. Your reputation speaks for itself. I got emails from some other people that had conversations and dealings with you. I wish that I would have saved them now !!!!

I welcome you
>and others to view unsolicited feedback comments on EBAY with my screen name
>**thetubeman**.
>This tube and equipment business I have been in for many years, and we both
>know that a person can not remain in business and grow if they treat their
>customers unfairly. And this transaction would have turned out much better
>if you had of handled if in a different manner.

You are also correct again. I should have called my attorney and had this taken care of. I may still be able to do this because I`m still in touch with the tech that repaired it and knows where the amp is at. Do you want to proceed further ?????? I have all the emails that I sent to you and never got responses on. I also have six pictures of the amp that you sold to me along with the emails that you sent to me that said the amp was cosmetically perfect and worked fine and was checked/repaired by your tech.
Richard, could your misrepresentation be considered fraud ???? I`m not sure,

but I could find out without much trouble.

ALSO, even though the unit had 2 good tubes when it left here, you said the
>tubes were bad, I sent you THREE new tubes asking that you return the 2
>'bad' ones along with the extra one that I sent...you did not do that....if
>fact you wrote me a Email saying "I hope you don't expect to get those tubes
>back".

Here we go. Send me a copy of these emails and I will post it on this news
group for all to read. I had a thousand dollars in a junk amp that you sold me.
I`m embarrassed that I was stupid enough to buy this thing from you.
One tube was bad. You sent me TWO TUBES that were from different manufactures
made in different years. The writing was even half worn off one of the tubes.
Where the hell did you get these tubes anyway ?? You think I`m going to put
them in the amp ???

This was an additional $270 that I spent to satisfy you.
>Then I agreed to help with any cost of repair, which you never asked for,
>and finally you sold the amp without contacting me first

BULLSHIT..... I was so pissed that I almost drove down to see you in person.

. And you have
>posted unjustified negative comments on the internet for over a year. All
>of which I have overlooked.
>Slander is a different thing. I would respectfully request that you cease
>your slanderous statements. There is a difference between negative opinions
>and slander.

Tell you what then. My negative opinion is that the amp you misrepresented to
me was junk, didn`t work and was not wired properly.
Is that ok, Richard "The Crooked Tube Man" Hale ????

>Randy, I am truly sorry that you are unhappy with the deal which transpired
>all most 2 years ago but I think that I did more than my part in trying to
>make you happy.
>
>Sincerely
>
>Richard Hale
>The Tube Man

My comments are justified and I hope that it will save someone from making the
same mistake that I did. Beware of this crook by the name of Richard Hale. I
got burnt on my deal. Learn from my mistake. There are a lot of other honest
people out there that sell the stuff that this crook advertises.

Richard, I hope that you learned something from this. If you screw people and
expect to get away with it, think again. Not everyone will lay down and take
it.

I almost forgot. Can you tell me why your tech uses duct tape in his amps ????
I`m still trying to figure this one out. I guess it was to hold some of the

parts in ???
I doesn`t fucking work !!!!!! Try some glue or something else next time !!!!!!!

I`ll bet you wish that you would have given my money back one of the numerous
times that I asked you for it.....

Take care crook !!!!!
Randy

In Australia, a 1 watt ERP beacon would be legal anywhere from 26.98
to 27.23 Mhz, under low interference potential class license rules.

Is there something like it in the US?

Dear Randy:

Let's go over this one more time....these are the facts, No "BS".
By the way, I have been courtious to you, I would very much appreicate the same in return, the use of profanity does not help this matter.

FACTS:

1) I am not a tech and never said that I was...I DID pay $400+ to have the amp repaired and the amp was in good working condition when I shipped it to you and the amp was not damaged in anyway when it was shipped via UPS
2) You did ask for a refund AFTER you had dropped the amp and told me that "I may have damaged it but I will have it fixed"
3) I agreed that I would help you with the cost of any repairs needed to get the amp working to your satisfaction
4) I sent you additoinal tubes to replace the tubes that you said were bad>>even though the amp and tubes were working when I shipped it
5) IMPORTANT>>>I never never never got anything from you regarding the cost of the repair-nothing zero nada....the next thing that I heard about was that you had sold the amp
6) I never refused not to do what I said that I would do,. I would have gladly tried to negoiate a refund on the repair work, as I said that I would do>>>To this day I still do not know what you paid to have it repaired>>>Either you forgot to send me a total or maybe it was sent to the wrong address, regardless I NEVER RECEIVED anything from you
7) I responded promptly to all your Emails and do what I say I would do but for some reason we got 'off course' with the resoluction of this matter.
8) I have not and am not trying to avoid the issue....I will do exactly as I said I would do from the very beginning. But you can not expect me to respond when I have NEVER NEVER NEVER received anything from you, in regards to the cost of any repair or anything as to what you though would be fair, after you chose to sell the amp
9) As I stated earlier I do most anything within reason and many times more than I should, to insure a customer is satisfied and that is what I am trying to do here. I am TRUELY sorry that you were not pleased with the deal and AM going that extra mile in any effort to ''make the customer happy".
10) I welcome your suggestion as to what you feel is fair.

Respectfully,

Richard Hale

> the FCC is looking for?

I have to say, Leland; this does not sound like the Leland I know. I completely agree with everything you've stated here. The rig is not the culprit, the rogue operator is. I do agree, however, that there are certain rigs that are a bit too obvious with their true intended purpose though. I can't see maligning true "all/multi-mode" rigs like the President Lincoln/HR-2510/HTX-100, AR-3500, Magnum 257, etc., however, there are a bunch of "10-meter" AM or AM/FM only rigs that I just can't seem to see any legit use for. I think Azden or Alinco tried to market a FM only 10-meter rig that was a resounding flop. They couldn't even give 'em away. If you're both a ham and an 11-meter enthusiast, there's absolutely nothing wrong with taking advantage of the tighter receive of an FT-840, IC-706MkIIG, or a HR-2510 for that matter. When I read about an FCC field agent actually eyeballing the goods and then issuing a "half-vast" (Thanks Dick.) warning, I don't take it as the most positive note. If the FCC was really going to DO something, they'd have done it already. I now about the slow, yet exceedingly fine, grinding wheels; but enough rhetoric already. Sorry Leland, I know that I've been in a rotten mood lately. It's not directed at you, I'm just getting some general ranting off my chest.

That brings me to my next question. How's that IC-706MkIIG? I really am going to ask my XYL for a nice Christmas/birthday present this year and I'm a tad ambivalent. I kinda wan't a HF/MF/VHF rig for home, but I'm not sure. The price is right for the 706, but the 746PRO II isn't all that much more. The FT-847's always an option. I dunno, I'm feelin' kinda fickle lately. I know there's a "free" (I'll get Santa Spouse's credit dard activity anyway.) I'd forgo the VHF capability for the IC-756PRO II in a heartbeat though. I was at a friend's house a few days ago and playe with his FT-1000D. What a gorgeous rig and he's kept it looking like he bought it yesterday. Is it normal to go through this "kid in the toy store" syndrome? I'm usually a pretty frugal guy. Take it easy, Leland.

We have Part 15 (of the FCC rules) devices but 1 watt is way out of
bounds. CB is Part 95 and the Amateur Rules are Part 97. If you really
give a healthy hoot about US rules, see www.fcc.gov and be prepared to
wait.

>Dear Randy:
>
>Let's go over this one more time....these are the facts, No "BS".
>By the way, I have been courtious to you, I would very much appreicate the
>same in return, the use of profanity does not help this matter.
>
>FACTS:
>
>1) I am not a tech and never said that I was...I DID pay $400+ to have the
>amp repaired and the amp was in good working condition when I shipped it to
>you and the amp was not damaged in anyway when it was shipped via UPS

I immediately asked for a refund when I opened the box. No response from you. The amp was not working when I tried it. I picked it up and dropped it from a height of 2 to 3 inches. It then worked poorly and I think a tube was bad or went bad. I asked for a refund again. No response. You sent me two tubes. I had a tech fix the amp. I asked for my money back FOR THE AMP ONLY (I didn`t ask you for the money for the repair work) and I would give it back to you in working condition. No response. I found out from the tech that it was not wired properly.
I suggest you get a new tech.

>2) You did ask for a refund AFTER you had dropped the amp and told me that
>"I may have damaged it but I will have it fixed"

I asked for my money back at least 3 times. No response. I had it fixed and asked for my money back. No response. (I`m getting tired of typing this over and over)

>3) I agreed that I would help you with the cost of any repairs needed to
>get the amp working to your satisfaction

Do you want to pay me now ???

>4) I sent you additoinal tubes to replace the tubes that you said were
>bad>>even though the amp and tubes were working when I shipped it

You mean the two tubes from different manufacturers from different years with half of the lettering worn off the tubes ???

Why would I put these in this amp ???

>5) IMPORTANT>>>I never never never got anything from you regarding the cost
>of the repair-nothing zero nada....the next thing that I heard about was
>that you had sold the amp

I never asked you for money to repair the amp that you told me was in
excellent shape. I wanted my money back. Do you want to pay me now ??

>6) I never refused not to do what I said that I would do,. I would have
>gladly tried to negoiate a refund on the repair work, as I said that I would
>do>>>To this day I still do not know what you paid to have it
>repaired>>>Either you forgot to send me a total or maybe it was sent to the
>wrong address, regardless I NEVER RECEIVED anything from you

Same thing again. You would have never sent me the money anyway. The only thing
that I ever got from you was an email saying that you were sending me some more
tubes. Do you want to pay me for the repair work now ????

>7) I responded promptly to all your Emails and do what I say I would do
>but for some reason we got 'off course' with the resoluction of this matter.

Never did you respond.

>8) I have not and am not trying to avoid the issue....I will do exactly as
>I said I would do from the very beginning. But you can not expect me to
>respond when I have NEVER NEVER NEVER received anything from you, in
>regards to the cost of any repair or anything as to what you though would
>be fair, after you chose to sell the amp

Why would I continue to contact you when you would not send me a response. Do
you want to pay me for the repair cost now ??

>9) As I stated earlier I do most anything within reason and many times more
>than I should, to insure a customer is satisfied and that is what I am
>trying to do here. I am TRUELY sorry that you were not pleased with the
>deal and AM going that extra mile in any effort to ''make the customer
>happy".

Yeah, right.........

>10) I welcome your suggestion as to what you feel is fair.

I`m just curious, but why did it take you all of this time to respond to my
posts ??? An honest person like you would have resolved this 2 years ago when
there was a problem. Do you want to pay me now ????

I sure hope that there are millions of people reading this.

Randy

Source record: 118184

That's about it--Voobner pretty well summed it up. FCC has a list of single-band "10 meter
radios" that have no certification for import or sale. Some of the reasons are obvious. If you see one of those so-called "10 meter" radios that has "channel" display and frequency display, chances are it will be on that list. If it has powers of over 4 watts, it is certainly on that list--just as it is illegal to use your ham rig on CB. Surely, there are radios that may be
capable of operation on CB, but it is not legal to do so. We all know that. I am informed
that Customs has been told to confiscate such radios after 12/31/02.

What I was saying in my last post was that Mr. H. had spoken about actions that were going to be taken against illegal radio as far back as 1999. I have even asked him personally and
one-on-one about the truckers on 10 meters, and he reiterated his promise that things would be in the works to deal with it. I got flamed and cussed at about it along with denials ("Ah'm
a-gonna run mah 'reddio' enny whar I wanna, an' them thar FCC fellers can't do nothin' 'bout it".) Where we often disagree is the scope of the illegality. IOW, it isn't my place to
be "policing" the CB band, and as long as they do their thing down on channel ****, I don't
have a say. When I am on my CB, or listening to traffic reports while traveling, I just turn it
off if I don't like what I hear. BUT, when they get on frequencies or bands that interfere with me and where I have the privilege by virtue of license, then it WILL get my attention.

Things ARE beginning to change--granted, slowly--but change they are. It HAS to. There
are too many complaints from both at home and overseas. Some of that overseas chatter
we hear (and sometimes use in a failed attempt to justify our own "freebanding") is due to the fact that they are allocated those frequencies via treaty, and the US is not. It will happen in-
frequently at first, but then those truck stops and parking lot CB shops are one of the first
things in FCC's gunsights. From what RH said, they are right on their schedule and keeping
their word.

I am curious here....
Indulge me for a minute..
If a conversion was available for the HTX-10, How many of these things
are there out floating around ... Mind you this is only a question
I'masking. Say the conversion was obtained and worked to expand the
frequency coverage, How many people would want something like this done?

Thanks for your time
Chris

Interesting. There is a lot more to doing effective QRP than just the watt output. As far as I am concern, if a person has enough technical know how to figure all of that out, its time for them to get a HAM license. But then again, QRP on HAM bands isnt any easier..lol

> I have to say, Leland; this does not sound like the Leland I know.

You can rest assured that it is. What it looks like is the FCC is going to take the same approach they did with illegal amplifier use on 11m, i.e. they removed that ability from any commercially manufactured H.F. amp right out of the box. About the only way to stop the pirate CBer from using 10m specific gear on 11m is basically ban it from being imported in to the USA. Of course you know how happy that will make the collective Ham community as did the rules on H.F. amps did. It would seem once again Hams have to suffer because of the action of pirate CBers. The FCC also has to address the intruders on 10m because of the issue of stock CB radio PLL mod's. You can find info on how to mod these rigs just about anywhere on the net. I know at one time the FCC required that the PLL section be design so that one could not get in to modify it's operation. So either the FCC changed their mind, or people figured a way around the design safe guards.
I
> completely agree with everything you've stated here. The rig is not
> the culprit, the rogue operator is.

I agree.

> I do agree, however, that there
> are certain rigs that are a bit too obvious with their true intended

> however, there are a bunch of "10-meter" AM or AM/FM only rigs that I
> just can't seem to see any legit use for.

True. But the cost of the all mode rigs is dropping fairly fast. You can get an IC-706 or FT-100 for under $900 US now. In another year or two you can shave another few hundred bucks off the cost. Even the new FT-817, which can be modified for full HF transmit, can be had for a little over $600 US. If the cheap "export rig" is the problem now, I can see the dropping price of rigs like the above to be the pirate CBer's rig of choice later. Heck even Tim ran a FT-840 for a while.

> I think Azden or Alinco

> all that much more. The FT-847's always an option. I dunno, I'm
> feelin' kinda fickle lately.

Every rig has it's good and band points. The 706, well it works out of the box, but does need some ferrite rigs to keep RF out of the control head. The noise blanker does not work real well compared to the FT-100, and the DSP is not as flexible either. Other than that it works like a charm. I'm happy with it. Now if they came out with one that had the 222 band in it, all mode, I doubt I would wait long to get it. 8-))

The FT-100 some say has a better RX section, but others can't seem to tell the difference. The noise blanker works good, as does the DSP. However there are reports that far too many Hams have had problems with the output PA section going in to oscillation. Boo Hiss. Also there is no alpha numeric memory naming ability. Plus you need several cables to connect the remote head with the main box where as the Icom only needs one.

The FT-847 works fine as is. There is a small problem with the power switch failing if you use it real often. Also there is no remote control head for the rig or memory channel naming either. On the up side you do get a full 50 watts out on 70cm. The other two rigs will only get you 20 watts. One more nice thing about the 847 is in sat mode you can use the rig as a cross band repeater, and cross mode too. For example you can RX on 2m FM and TX on H.F., 6m, or 70CM SSB. Also the same ATAS screwdriver antenna that works on the FT-100 also works on the 847 exactly the same way.

> I know there's a "free" (I'll get Santa

Yeah it is. You always seem to want more that what the old pocket book can afford. Don't forget that those guys you see on the front cover of your favorite Ham magazines spent years trading equipment to get that dream station of theirs.

That could definitely apply to a percentage of the folks on 11-meters. I'd love to see the FCC reinstate licensing for the Citizen Band. I don't think a really positive effect can be achieved anymore without some sort of compromise re. the "hobby" status of the band. I know that the idea of ANY compromise irks allot of folks, but quite frankly...we've passed the point where ANYONE is going to move the masses off 11-meters. We could just draw a line in the sand, but the current situation will just roll on with little or no change. Sure, the FCC will get its "pound of flesh" here and there...but it's a classic case of too little, too late.

I;ve gone over some possibilities re. a "shared" solution to bridging the gap between the 11-meter "hobbyists" and the those who'd oppose ANY change, so I won't repeat them again. I think the denial of RM-9807 was a lost chance for a first step. The return of licensing and enforcement would increase accountabilty. Heck, you might actually even start to so some "self policing," rather than the empty rhetoric we commonly read on the NG. (Ad nauseum) The only thing I'm fairly certain of is that 11-meter "hobby" radio is growing. The HR-2510 and RCI-2950 have been in continuous production for over thirteen years now. That's (Along with the other various retailers.) indicative of the market. I didn't wish for it and I'm not making it up...it's just the way it is. I'll keep my fingers crossed for all parties concerned.

3929. Calibrating my CB with a SWR Meter, questions!!!

Newsgroup: rec.radio.cb
Date: 2002-03-14 23:12:56 UTC
From: Axl <no@idontthinkso.com>
Message-ID: <Y7ak8.153384$Hu6.35108915@typhoon.neo.rr.com>
Source record: 118190

I put a new CB into my car this week and it just didn't feel like I was transmitting at all. With this CB I also bought a new antenna...27" rubber coated (fiberglass I assume) that is magnet mounted to my trunk (92 accord). When using the swr meter, I am calibrating it on each channel as I should be. What I've noticed is that on Ch 1, I get almost NO signal loss....on the meter it's at about 1.2..which as I understand is good. The higher the channel goes, the more and more signal loss I get in my transmission....by the time I'm at Ch 40, the meter is reading past 3, into the red infinity area!! On Ch 19, I'm at about 2 or 2.5.

According to the manual it suggests to mount the antenna elsewhere. I just get the feeling that with such a regulated pattern of this channel/power loss ratio, mounting the antenna on my roof wouldn't really fix this problem.

Does the length or run of the antenna coax cable have any affect on this? As of now it runs down the back of the trunk, INTO the trunk, comes out and along the back seat, down onto the floor and then under my seat where it runs into the CB mounted on the side of the center console. I believe it's 16' long....possibly 12.

Power doesn't seem to be an issue at all...it seems to be well grounded.

Can anyone help me out on this?

Thanks!

Bert added:
> completely agree with everything you've stated here. The rig is not
> the culprit, the rogue operator is.

Heck, no one wants to ban the sale of Yaesu FT-840's Bert. But one
can't easily fit NRA-style arguments to this problem.

SOME rigs ARE the culprits.

As previously stated, some rigs ARE designed SPECIFICALLY for illegal
CB use. (The ones with "channel selectors" that go from 1 to 40 on
six "bands" come to mind)

Rogue operators did not suddenly (and collectively) decide, OK
EVERYBODY, NOW IS THE TIME TO BOOTLEG ON 10 METERS. The availability
of the 'right radio at the right price' did it. The number of
'export' radios manufactured and aimed at the US domestic market and
sold to truck stop distributors (a crime in itself) during the last
two years did INCREASE.

Few 'export radios' available = little or no intruders on 10 meters.

More 'export radios' available = more intruders on 10 meters.

If those cheap-to-buy, easy to obtain, simple to operate,
already-modded 'export' radios did not exist -- I seriously doubt that
truckers would be running to HRO to buy Yaesu FT-840's at $899 a pop
in order to operate on 28.085.

Perhaps without these already-modded rigs on the market, many of Bert's "hobby radio novice freebanders" would be deprived of an initial illegal freebanding experience and perhaps eventually drift away from the radio hobby and never matriculate to ham radio?

Nah.

-Aaron-

3932. Re: Calibrating my CB with a SWR Meter, questions!!!

Newsgroup: rec.radio.cb
Date: 2002-03-14 23:31:19 UTC
From: Gary Danaher <gdanaher@attbi.com>
Message-ID: <3C9132D7.B1DD968B@attbi.com>
Source record: 118193

A couple different things. Firstly, a short magnet mount antenna isn't going to do very well in many situations even if the swr is a flat 1:1. Because the swr progressively increases as you change from low to high frequencies, it suggests that the antenna is electrically too long. There should be an adjustment at the base of the antenna that will allow you drop the antenna into the base an inch or so. Do so and see if it makes a difference. Beyond that, reposition the antenna to the center of the roof, close the doors, get in the car and from that point check the swr. An open door makes a difference as well as a human body too close to the antenna. I'd give serious thought to getting a more permanent mount and antenna--perhaps a trunk lip mount, and something longer. I could build an antenna that's 6 inches tall and have a flat swr, but it wouldn't actually work very well at all, but it would look really good!!

you need to trim some off the antenna. do about 1/8" at a time, move your resonate frequency to the middle of the band. Say like where you have 1:2 swr on channel (1) if you cut the antenna a bit with a hack saw or a grinder. you can move the resonate freq. higher up the band. get it to where it show 1:2 on channel 20.

Yeah.. The arsonist didn't cause that fire.. it was the fact that matches
are readily available and too easy to use! LET'S BAN MATCHES!!!

Seriously now, I think it's more a problem of lack of education and
ignorance than anything else. Tell people the difference between 10 and 11
meters, and let them know the consequences of transmitting where they're
not licensed, and most will try to stay "safe".

There is that 10% that won't care, and who will freeband. Of that 10%,
there's 10% that'll care even less and venture onto the 10M band regardless...

Now if noone tells them any different, most will think that they have this
new cb radio with 6 or 8 bands they can legally use, and they'll think they
have a right to transmit on 28.085. They're wrong, but try telling them that.

Just a quick lesson on swr. It measures the ratio of transmitted versus reflected power. The second number is always '1', hence, a signal sent to a dummy load is normally seen as 1:1. If the swr is over 2:1 then it will adversely affect the signal output. While ideally you would like to have 1:1 swr on every channel, it isn't going to happen because the length of the antenna must change with the length of the frequency transmitted. The best you can do without a tuner is to shoot at the most used frequency and be happy with it. If you can get 2:1 swr at channel 1 and 40 and something like 1.3:1 on channel 19, go and enjoy the radio. Just remember that something only 2 feet high isn't going to do as well as a full length antenna roughly 36 feet long.

Hey George,

I used to have a GE version in the late 70's. I realize that most Part 15 devices are 100mW, but I could swear that I remember reading 300mW on this particular model. But I could certainly be mistaken. I currently have a NOS example of the unit pictured on the ebay link and I have to say, it gets the job done. Take it easy.

Yeah....I understand the theory in that...but I think the problem I'm running into is just the fact that just rolling on the highway, if I'm on 19 and hear people clearly, when I go to talk back it's like they cant even hear me....and if I'm losing a significant amount of power, like the 3 reading on the swr meter, then that would easily explain why I'm not being heard, correct?

Would another way to generally "balance" the calibaration be to try to perfectly calibrate channel to 20, so I dont have perfect calibration on one end but none on the other?

Easy, the NRA's correct.

>SOME rigs ARE the culprits.

The ones that are AM or AM/FM only, but certainly not the multi-mode ones. It's called personal responsibility, Aaron.

>As previously stated, some rigs ARE designed SPECIFICALLY for illegal
>CB use. (The ones with "channel selectors" that go from 1 to 40 on

I don't think it's the "channel selectors" that are the major determining factor, it's the available modes that nail it down.

>Rogue operators did not suddenly (and collectively) decide, OK
>EVERYBODY, NOW IS THE TIME TO BOOTLEG ON 10 METERS. The availability
>of the 'right radio at the right price' did it. The number of

I partially agree, see above re. modes...or lack thereof. "A crime in itself," yet a FCC field agent does nothing? C'mon A.

>Few 'export radios' available = little or no intruders on 10 meters.
>
>More 'export radios' available = more intruders on 10 meters.

Too broad.

>If those cheap-to-buy, easy to obtain, simple to operate,
>already-modded 'export' radios did not exist -- I seriously doubt that
>truckers would be running to HRO to buy Yaesu FT-840's at $899 a pop

Partially correct. Again see above re. modes...yada, yada, yada. BTW, you can bag a FT-840 for for a little over six bills and an IC-718 for even less than that.

>Perhaps without these already-modded rigs on the market, many of
>Bert's "hobby radio novice freebanders" would be deprived of an

>initial illegal freebanding experience and perhaps eventually drift
>away from the radio hobby and never matriculate to ham radio?

Perhaps not all...but certainly some. BTW, while I appreciate the spirit of
your gesture, I cannot claim ownership of any "hobby radio novice freebanders."

I told you you'd get in trouble trying to adapt the NRA argument to this situation. The matches analogy is flawed, and here's why.

All "matches" are not the same. In this case, the "matches" are specifically designed to be used by arsonists. They are marketed in such as way as to appeal to arsonists. And they are intentionally placed for sale where arsonists are likely to see them.

No one is threatening your legally-owned and operated ham radio, SSB, so calm down.

This is the stuff I got....in case this info might help diagnose.....I realize it isn't the best but price wise and what I need it for it was good enough.....The antenna is what I'm looking at the most...I didn't see anything that allowed the antenna to drop down even a little bit...there's the base with a screw on it and then the whip screws down on to that....on the underside there's a bit of plastic which just seems to cover the magnet.

there IS a nut down around the screw sticking out of the base but it doesn't seem to be easily accessible at at.....so take a look....I assume if I DO have to cut this down, I do some from the top and then replace the nipple thing...which seems to be impossible to get off too...lol

Follow these links to see what I got: (copy/paste links if you cant just click them)

The CB:

I'm having probs with them....so go to http://www.radioshack.com

and in the search type 21-1710 for the CB and 21-801 for the antenna.

sorry bout that.

If you go with trunk lip mounts it is a really good idea to be sure the
trunk lid is electrically part of the car. Also, with the crimping
ripple, rustproofing, paint etc. one or two setscrews aren't the world's
greatest ground in any case. I found this out the hard way on 2 meters;
what was an irritation on 2 would be a disaster on 11.

Right on with 'too long'

Still think the problem would go away with 6 channels of FM on something
like 13.2 kHz spacing with four goofy PL tones by direction (N<E<W>S) near
CB so they could use the antennas. Two watts would do the job.

>the FT-100 also works on the 847 exactly the same way.

Thanks for the info, Leland. There's something about the FT-100 I just don't
like. I'm "feeling" IC-746PRO II in my future and bringing the appropriate
pressure to bear on Santa Spouse.

>I'd forgo the VHF capability
>> for the IC-756PRO II in a heartbeat though.
>
>I don't know about the 756 Pro other than what I have seen. It does look

Depending on our fiscal situation toward the end of the year, if I can get away
with it...I'd prefer to "feel" the IC-756PRO II. Three Kilobucks is nothing to
sneeze at though.

>Is it normal to go

Sometimes I wonder about you. Anyone can see I was making reference to an ANALOGY Bert. It was SSB who introduced the "matches analogy" in the first place. Ask him about black helicopters.

My point still stands. The only people who would bitch about the removal of 'export CB radios' from truck stops are the ones who use them or want to see them used illegally.

Since your query is posted ONLY in rec.radio.cb it's safe to assume
you are testing the waters to see if you could profit from such a mod
aimed at the illegal CB market. Mind you, this is only a theoretical
assertion I'm making, but if you should begin marketing such a mod to
Cbers, I and others would make the FCC aware of you and your 'business
enterprise' in short order.

Think about this.....With the cost of a new truck I drove out to pick up with a friend a few months ago being $225,000, don't think for a minute these guys would blink at a number like that! If talking where they want is the game, they will get there and most drivers (owner ops) are not afraid to put out the money for what they want.

Then in the absence of any adjustment, either move it to a different location as previous suggested and test it there, or take it back. I understand you feel it is all you can afford, but what you have here isn't working. Never expect a Yugo to ride like a Mercedes.

Message-ID: <3C9179FB.6E6E6D93@attbi.com>
Source record: 118219

The 3:1 reading is PART of the problem. The other part of the problem is that the antenna is just a couple feet high. You probably have the squelch turned down so you can hear alot of stuff and you are presuming that the other guys are doing the same, but you might be mistaken. It's also possible that they can hear you and choose not to respond, but more likely is the fact that your little antenna is barely more than a dummy load compared to a quarter wavelength radiator. Find someone with a radio and talk to them as you drive away and see how far away they can continue to hear your signal. It won't be far. I still think you need to put it on the roof and then check the swr before you do anything else, and NO don't start cutting on the antenna if you don't know what you are doing.

You gotta dump that antenna my friend. Radio shack makes one that will work a lot better than that. It's not the best but a lot better than the one you have. #21-996.
$49.99 is still too high though. For 20 more bucks you can get a Wilson 1000, and a Wilson 5000 for a bit more than that. For your Application I'd go with the 1000.

Source record: 118222

Last hamfest I went to there was a dealer there selling cheap "accessories" for CB and ham gear. Among them where these little brass colored metal things that looked like some sort of detonator/trigger thing with a fat piece of mic cable coming off of them. The packaging said "Do not use as a weapon" or something like this. It was either made by Euro CB or Workman or one of the other "cheap" manufacturers. So.....what the hell was it? Any ideas? Thanks!

3962. Re: HTX-10 SURVEY.....

And I thought these things were made specifically unmodifiable by Radio Shack. Their "cousin" (I guess) the Magnum 257 was the modifiable one.

* No license needed at all (Part 15);
* 1 watt max input to the final;
* Antenna + transmission line + ground lead =< 15m;
* Out-of-band emissions reduced by 20dB min;
* Any mode.

The band has no skip but great groundwave propogation -- mine can
reach 20 miles using AM over poor soil and hilly terrain. I think the
over-land record is just shy of 1000 miles. Most of the people that
use the band are experimenting with antenna efficiency and modulation
techniques.

Here's a site with a few links:

http://www.vicon.net/~aketner/lofer.htm

At CB frequencies, you need an antenna so long, your car
looks like an RC vehicle.

Where's my remote control?

Nice try, Aaron. But your attempted redirect failed. Chris may have
introduced the analogy, but it was you skewed analysis of that analogy
that made me wonder about you. Matches marketed for
arsonists...indeed.

Again, while there are some models whose removal might help the
situation, (AM only? C'mon!) you can't blanket ban them all.

The "R" version is the more mechanically sturdy mobile version. Also the
same version has less power drift when used in a UHF class amplifier.

So who is going to stand at the truck stops to rip out the rigs that the
truckers will not give up voluntarily? Nice idea Richard but I doubt the
pirates will be handing over their radios without a fight.

3975. Re: FS: 3CX15,000A7 Follow Up Part 2 from Randy again

Newsgroup: rec.radio.cb
Date: 2002-03-15 14:10:45 UTC
From: lzboyz@aol.com
Message-ID: <20020315091045.24404.00000410@mb-cn.aol.com>
Source record: 118236

I see we are back to no responses again.

I was thinking about this last night.

Why would you say that you sent me 3 tubes for an amp that used only 2 ???
You sent me two.
Was it because you didn`t know if the tubes you were sending me were any good
??
I thought you said that you (or your so called tech) tested everything you
sold and knew that it was in 100% perfect working order before you sold it.
Was it because you knew the amp didn`t work (wired incorrectly) correctly and
cooked tubes ???
Was it because you didn`t know if the tubes in the amp were any good.
Why did you ship me the amp with the tubes in it ??

Do you want to pay the repair bill that I paid, to get the amp wired properly,
now ???

Do you want to refund my money if I get the amp back ??

Randy

You`re right Aaron. This amp will never be used on CB.
Hahahahahahaha.............
With 1.5 watt deadkey and a nice swing it`ll EASILY do 500 watts. Of course
that is into a dummy load because it`ll never be used on CB.
It`s still ugly.
Myself, I like to test much larger amps that I`ll never use on CB because we
know we ain`t allowed to.
I like to test dummy loads to see how hot they get. How about you ??

Randy

3977. Re: Lookin 4 a pair of 4CX250R

Newsgroup: rec.radio.cb
Date: 2002-03-15 14:30:33 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3C920589.8CBC6FFC@qnet.com>
Source record: 118238

Hello Skipp: The "R" versions are reccomended by the amplifier
manufacture.

I belive the 4CX250R's have a high output rating than do the B's.

This is for a 3150, older amp. That was made for the military, that
orginally used the 4X150 tubes, and a choke input power supply.

By replacing the 4X150's with the 4CX250R's, and removing the choke
input circuit, by bypassing (removing) the choke in the power supply,
the B+ shoots up allowing the use of the 4CX250R's tubes.

The bias is also adjusted. The Manufacture "Motorola" shows all the poop
in a later relaeased service bulletin, that with the owners manual.

Out of time, I owe I owe, so off to work I go.

Ckeck out http://www.majestic-comm.com/assembly/index.htm

Select the V-Quad. It is a 2 el. delta loop for 27 MHz. Hope that
helps, take it easy.

Leland,

Basically, there is a list of "export" radios that was published a year (?)
ago that FCC deemed illegal to sell in the USA. I know there are certain
Galaxy, Connex, and others
that are on that list. The basic reasons, I have already mentioned; too
much power, a
"channel" switch AND a frequency display, easily modded. It isn't all that
hard to look
at one of these banned radios and tell why it is not legal in the US. In
spite of all the
debate, the purpose and target market for these radios is quite clear to any
who care.
I believe there is and WILL be an increasing emphasis on stopping these
radios at the
border. Right now, they seem to be hitting the truck stops, particularly in
the West, in
an effort to curb the 10 meter incursions. My point is, and has been, that
FCC was AWOL
for over 10 years--basically asleep as far as CB was concerned. I think
they actually
thought that all of the problems would be within the 40 channels with a few
straying out
into the "freeband". The "predator" is stirring slowly, and while the
"prey" enjoyed their
time frolicking without danger of being pounced upon in the past, that
safety is decreasing
quickly. Some of the "prey" are in denial and believe that the "lion" is
dead. But the com-

plaints from all quarters has risen to the point that it can no longer be ignored.

We know, Leland, that the proliferation of amps on CB caused the law in 1978 that no
amplifier could be made and/or sold with 10/12 meters enabled right out of the box. The
hams, thru no fault of their own, got punished for it. This *could* cause the supply of single
band 10 meter rigs to dry up--hurting the new ham who is upgrading and needs an econ-
omical 10 meter rig. While many of us deny it, there are many results that could come of
the insistence of illegal ops to run their stations to the detriment of others.

On another topic, I was told by a Kenwood rep last weekend that the TS50 is to be upgraded this summer (after Dayton) and given 6 meters and remote (finally). They haven't
officially announced it yet, but it is *supposed* to be in the works. I have always liked the
TS50, and I guess I will have to have one of the upgraded ones.

Message-ID: <rhpk8.78982$Nn6.4102929@e3500-atl2.usenetserver.com>
Source record: 118242

Chris,

To date, I have not heard of a "channel" mod for the HTX10. Last I heard, if you try it,
the prom will go bonkers. Radio Shack intentionally made this rig unmodifiable because
they got in dutch with FCC over the HTX100. Their efforts are to be commended, IMHO.

Funny!
But the haters will still bitch and moan.
What else do they have to do?

Hello NI4L: The HTX-10 RS Radios weren't the cats meow when there where being made.

I think even the ten meter users arn't using them.

I have seen them modified by the Pros, just to prove a point that they can be modified, but whats the point if the radio is less than premium.

If its made by man, it can be modified by man. Ten-4!

Jay in the Mojave

I'm still waiting for one of the "big three" to include the 222MHz band in to one of the super-micro-mobile rigs. I had it out with the Yaesu rep last year, at Dayton, about why they couldn't stick 222 in to one of their multiband multimode rigs like the FT-847 or FT-100. I was told that nobody wants it, after he mentioned some other crap which I pointed out that didn't make any sense, and pointed out the 726 and 736 as an example. I told him if you didn't charge $300 to $500 for the module the story would be a whole lot different! The rep didn't have a cute come-back for that one. Who knows maybe they will get the point sooner or later.

FYI-222-225 (220-225 in Canada) is a "local" ham band here in North
America, it is not found in ITU Region 1 or 3. In Japan, where the
large amateur market dictates radio styles (Japan is the bellweather
for Ham Radio trends-large amateur population). Putting an odd band in
like 222(220) would limit the market for the radio to the US, CAN and
Latin America! Amateur & CB gear is a small market (called niche
market)
and for this reason, Motorola, Ericson and GE don't want it!

This all brings back a conversation I had with a friend on the topic of "nonmodifyable" radios not too long ago. This person was sent a radio BY THE FCC to see if he could mod the radio to transmit out of the spectrum it was intended for. It was claimed by the maker it was NOT convertible AND they (the FCC) could also NOT get it to go. The radio was returned to them within a few days fully converted along with the bill!
Wasn't there a "computer controlled" base model from RS about 1982 that was "supposed to be" unmodable?
As long as there are people wanting to get these or ANY other radio modified AND there are people willing to put in the time to figure out what changes need to be done to the "next newest bestest thing", conversions will continue on any radio that comes along. While some makes are making it a little more difficult to convert newer radios, there are those who will continue to thwart their attempts.

They can and did. Don't cry to me. Cry to the FCC.

FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio

Service (ARS) equipment." The notice--directed to "manufacturers, importers, vendors and users of these transceivers"--emphasizes that transmitters intended for use by FCC-authorized radio services except the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the transceivers discussed above are intended to be operated on frequencies where the use of type-accepted equipment is required, because of the simplicity of modifying them to extend their operating frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a transmitter that requires a grant of equipment authorization but for which no grant has been issued, and that it's a violation to transmit on frequencies allocated to a licensed radio service "without the appropriate Commission-issued station license." Violators could be subject to fines or imprisonment as well as equipment seizure and forfeiture.--FCC

Maybe you missed the point I'm making. If the pirates are satisfied with the export rigs they have now, since they can use them anywhere from 11m to 10m, why would they give them up for a rig with less "spectrum" to operate in? That is what you are proposing, 6 FM channels more or less, right? If that is what they want I would also assume they would have long ago moved to GMRS for example, which has about the same features you suggested except for the UHF frequency used.

Pardon me, but that is one of the GOOD qualities it has. For places like the
west coast, where 2m and 70cm is congested, another VHF band would help out
a lot.

Randy, you infer that the equipment is functioning well, i.e. you use
it illegally on CB. So why are you having an emotionally-charged
public conflict with an illegal seller/repairman of bootleg CB gear?

Just look at the Kenwood sky-command system for one example. The reason they
can't legaly sell the system here is you can't run a remote base system on
any band below 222, and that is exactly what they are doing on 2m.

Hi Group.
Can you please help with this problem.
I bought a cobra classic in the states then brought it to New Zealand
Does any one know the correct crystal and where I can get a free schematic
of the circuit.
Love to here from someone real soon.
Regards Pete....

It seems that the FCC is actually Targeting HF or "10" meter radios that have the 40ch USA Citezens Band already memorized & "Hidden" in the radio, waiting for a jumper or plug to "restore" it.
The Icom, Yeasu, Kenwood, Alinco & Ten Tecs, while also easily modifiable, don't automatically "pop into" a pre-memorized 40ch CB mode simply by doing the mod, like a Galaxy, Lincoln or Connex will.
The Problem, however is that there has never been a rule change to justify any new crackdown. These radios, as imported unmodified, were always considered "Legal" by the FCC, & there were actually some high profile "Busts" in the early 90's (A-1, Ranger ect) where the FCC confiscated & fined for 10/11M amps & Full 10/11M "export" radios, but allowed these same companies to keep & sell their Galaxies & Rangers, because they met all current written regulations as 10M rigs.
Also, the FCC has had many dealings with RCI, Galaxy ect, know exactly who they are, & yet make no effort to stop their radios from being imported.
The FCC rules are very specific on Amps, for example , no HF Amp will be FCC approved for import or sale if it is capable of amplifing 24-35Mhz as sold, and/or will reach full power w/less than a 50w input ect.
YET, the FCC has no specific written reg about 10M radios!! They could easily amend the regs "overnite", to say "No 10M/HF Radio can be offered in the US if it contains a 40ch selector switch, or it's internal memories are configured in banks of 40ch". This would effectivly eliminate or drastically reduce the most popular bootleg radios.
Why haven't they done this by now? It seems they are almost "in on it", that they knowingly allow thousands of these "40ch" 10M rigs to be freeely imported by Galaxy, Ranger & others, & openly Distributed to virtually all major wholesalers & dealers in the country, & seem content to just hassle a small few people & the odd truckstop or 2 each year, while knowingly allowing the main "problem" to continue.!

You are basically arguing 'installed base' for which you need only look at your TV set as a prime example. When UHF TV came out it took an act of Congress to require 82 Channel coverage and the color, stereo, captioning, etc. had to be compatible with the installed base.

Both your UHF and my FM do require some scrapping, mine far less than yours because I preserve an antenna system that does work hauling a 40 ft box. You want to use an existing service for which the queens, lids, channel masters, etc have equal access and I would prefer to see rigs sold in truck stops where the drivers could simply strangle the first one who sold to the local channel master. I should mention that one reg would require mobile-to-mobile communication only. We went the general service route once and you see where it got us.

Both of us still have the problem of incompatibility with good old Channel 19 which is still default in most places. And this is why we find them on 2 up, simple as that. I have skip disease you do not. Your antennas look crappy, mine don't. But they do find a place to talk and that, not outlawry, is the motivation.

I think it gets down to one's view of people and the role of Education and Engineering in the equation in addition to enforcement. You remind me of a border collie an uncle had who was a first rate herder but did not know when to quit: chickens proved to dumb to herd and the cats objected strenuously. Whatever else you might say about them, herding truckers is right up there with cat herding.

>few people & the odd truckstop or 2 each year, while knowingly allowing the
>main "problem" to continue.!

I really doubt that the FCC encourages freebanding. There are obvious
legal issues with the possession of such radios. There is also the
fact that anyone intending to operate illegally will use whatever
equipment that is available, imported or not. That is probably why the
focus of enforcement has been on illegal operation and not merely
possession of the equipment. The enormous fines for illegal operation
has been the primary deterrent of illegal operation. But enforcement
has been pathetically weak in recent years, and a person has a better
chance of winning the NY State Lottery than getting caught by the FCC.

So the real question is why the FCC is ignoring it's responsibilities.

In recent years the FCC has been busy licking the boots of corporate lobbyists. They have suspended long-standing regulations in broadcast standards, allocated frequencies based upon economic interests instead of public interests, and allowed previously illegal cartels to evolve and subsequently occupy the vast majority of the spectrum. Enforcement has been academic at best, just enough to keep the field agents from getting bored.

The major decisions by the commsission have been based not upon the best use of the spectrum, as per the Communications Act of 1934, but upon the protection of the economic interests of the biggest players. Do you ever wonder why the FCC takes such a keen interest in ham band intrusions while permitting tens of kilowatts on the CB and freebands? It's because the ARRL is one of those 'players'. Through selective enforcement, the FCC is effectively ignoring the issues of safety and interference that are imposed upon the voiceless majority.

Is the FCC to blame for it's poor decisions? Only in part: the majority of the blame rests with those that oversee the commission and influence it's decisions. We all know that the positions within the commission are appointed, not elected. And you can bet that any FCC official owes a debt to any elected official that is responsible for securing for them that position. You can also bet that the 'players' are constantly lobbying those elected officials in order to collect on those debts.

So to answer your question, "Why haven't they done this by now?", just follow the buck. You will see that the answer lies in the current state of politics: there is too much lobbying, influence-peddling, and political favoritism, and not enough accountability of, and from, our elected officials. If anyone wants to keep the current state of anarchy on the freeband, the best advice is to vote for the candidate that will ignore the best interests of the public in favor of 'campaign gifts' and 'career advancement opportunities'. And don't expect any responsible decisions from him or her in any other facet of government.

Truthfully, I would rather not. My point in all this is that in contrast to some real outlaws, these guy's major aim in life is making a living and staying awake. The availability of equipment plus a normal human desire for a quiet channel populated by like-minded people is far more the motivation than any electronic hell-raising. In a lot of respects they are more refugees than combatants.

Hey Aaron,

Did you get Doug and I rooms that adjoin yours for the lovefest we are having in Toledo? Like you, I had to tell the wifey that we were going to the hamfest. Oh! Forgot to tell you the other day when we were on 6 meters, that I finally got the damn gerbils to quit biting when I shove them into the tube! Cool, huh? Just wondering, should I bring one for each of us, or do you just want to share the same one? I don't think the wife will notice one missing, but I think she might notice 3.

Tell Doug to bring that hot love oil he always uses....like he would forget that stuff, huh! LOL BTW, I found a really cheap place to pick up the batteries for the toys, and I got plenty of AA, C, and your favorite size, D! Hell, if we run out, Doug knows his way around Toledo, so we can send him for more while you and I fool around without him! Wink, wink!

Can't wait to see you there,

-M

The post office will do nothing unless they see a pattern of such
actions. Even then, they cannot do anything to get your money back
for you - just criminally prosecute the fraudulent seller.

It is possible that he sent a money order - and that it was cashed.
That does not mean that you received it - it may have been stolen.

Once you have the serial number of the money order, you can contact the
Post Office for a copy of the cashed document. It may cost a few dollars
to do so.

Look here (my hands are thrown high in the air). Arghh. The point of moving the antenna to the roof is to provide it a different ground plane at the same time as eliminating some possibly offending metal which could be reflecting rf back, and finally by eliminating potentially poor grounding between the truink lid and the rest of the body as a cause of the problem. As far as cutting the antenna, just say NO until you figure out what the problem really is. I still have a hard time believing that the thing has no adjustment, but I'll take your word for it. No instructions with the antenna?? Strange. If you do have to cut, perhaps a quarter inch to start would be sufficient, but remember you can't put it back on after it comes off.

Axl wrote:

> It's because the ARRL is one of those 'players'.

It is worth noting that ham band enforcement was almost completely
ignored up until a few years ago when the ARRL and its members (a
relatively small lobby compared to Telecom interests) begged, pleaded,
threatened, and screamed bloody murder.

If CB got its act together and managed to unify its rabble into a
lobby that resembled something other than a group of Hell's Angels on
a drunken spree they might be able to leverage some enforcement
efforts too.

How hard is it to move a magnet mount antenna?

I suggest you ditch that antenna, wrap it up and take it back to the Shack. Get yourself a Wilson 1000 or a K-40 since you probably won't go the large decent antenna route. Magnet mounts are good for about 100 watts before you burn the paint underneath. A properly mounted (that means drilled hole) antenna is the *only* way to go.

> back to the Shack. Get yourself a Wilson 1000 or a K-40

And I don't mean a 'lil Wil or a K-30. Short antennas suck on 27 Mhz
frequencies. If you want short sticks, go ham. A quarter wave on 2
meters is about 19 inches. 1/4 @ 27 Mhz=108 inches.

4039. FS: Four Heathkit GW-21 Citizen Band Walkie-Talkie Transceivers

http://mywebpages.comcast.net/mnowlen/heath-gw-21-top.jpg

Four Heathkit GW-21 CB Walkie-Talkies from the 1960s. I had a similar set as a kid. I got these with the intention of restoring them but just don't have the time. Two look to be complete and fairly clean with all controls and whip antennas. The other 2 can be used for replacement or spare parts. Two sets of snap-on leather straps included. Someone with the time and ability should be able to make a good pair. Sold as-is.

$40 for all four
Plus actual shipping charges
Send Zip code for shipping costs

Please email if interested,

Mike

Hello Axl:

Don't mind Gary, a lot of us here consider him as part of the
entertainment.

Let us all know how your antenna works on the roof, and good luck.

Jay in the Mojave

Didn't think it was possible, but it is. I have an old tv antenna on my roof. I don't really know what kind, but I threw some coax on it and ran it through my tuner just to see if it worked. Hahah!! It DID!! I got some pretty good reports for radio checks too. My question is has anyone else done this?? If so, what kind of luck did you have. I had a nice 1:5 to 1 match across all 40. Just curious.

Regards,
Jeff

Uh, wrong group? Anyways.....yes, I have played with both. There's a 70cm link system in my area called NERA that links a whole bunch of repeaters together and then to IRLP. I've had QSO's with stations in the UK and several other parts of the world on this system. Pretty snazzy. About a month ago, a friend of mine introduced me to ILINK and I've used that to hold conversations from computer to computer and from computer to radio, vice versa. One of the local 2m repeaters has a manually operated (one of the users/trustees activates it) "node" to ILINK and it's been in constant use during the late afternoon/early evening of this week. I've heard stations from all over come in on that thing. Both systems are really an interesting twist to the hobby. I like them both even with the limited amount of time I've played with them.

4052. Re: Calibrating my CB with a SWR Meter, questions!!!--ROOF READINGS

Newsgroup: rec.radio.cb
Date: 2002-03-16 20:04:22 UTC
From: Axl <no@idontthinkso.com>
Message-ID: <azNk8.160465$Hu6.36703140@typhoon.neo.rr.com>
Source record: 118414

Alright, it's up on the roof and here are my general readings:

(excuse me if I dont list these in proper technical terms)....ok according to the SWR:

CHANNEL READING
1 1.3
5 1.2
10 1.3
15 1.6
19 1.9
25 2.4
30 2.9-3.0
35 Over 30 in the red zone
40 Over 30 in the red zone

So, my channel 19 is much improved but I'm still doing no good on the higher channels, which still leads be to believe the antenna is still too long, correct?

Now, I also just fucking hate it on the roof just cuz it looks bad and at this point I will consider switching out antennas...and if I do so I'd rather still try n base it off of the trunk rather than the hood, even if it be a longer antenna....now Gary mentioned the trunk lip mount....keeping away from magnet-bases, I assume this is my only other option?

Chevy, I'll make note of those antenna models but where do I get them? Around here seem the only place i can find anything IS at radio shack.....think they have anything comprable? (http://www.radioshack.com) If they do I could always try n trade this one out for another...

If anyone sees a decent one listed on the shack's page let me know or maybe suggest where I can find another.....another reason I would rather do a trunk mount is just for the sake of running the cable...much easier to go in thru the trunk than slamming it in the fucking car door while it's on the roof lol.

Thanks for helpin me out all..I'll be checkin back soon.

Small antenna - small bandwidth. SWR goes up quickly from center position.

Since we are at the peak of a skip cycle, noise levels during the day are
very high. I can't even call my neighbor on 19 five miles away with a box!
I have to call on the phone and tell him to change the channel! Try your
test calls at night, a few hours after sunset.

> Now, I also just fucking hate it on the roof just cuz it looks bad and at

Trunk-lip mount will give a better ground then the capacitively coupled
ground from a magnet. However, trunk hinges are not a good ground at RF.
You will need to connect a braid from the base mounting point to another
point in the car.

> Chevy, I'll make note of those antenna models but where do I get them?

21-973 is a mirror mount antenna. Don't know if you have anything to mount it to on the car or not. Take a look at RS #21-996. This is another mag mount antenna. I believe this is the one that a friend bought to use with a 10 meter radio and require shortening for that. Was easily tuned and is adjustable, unlike what you have now. Take the thing you have back to the store and at least consider buying this one. I think this will work for you.

OK, it is resonant at Channel 5 but too long for channel 19. How much? Just a tad, but the antenna has no adjustment to it, so take it back and get the 21-996.

George:

If you want to get "accurate" results with your nonspecification of the properties of your "generic" 10dB gain beam, then you go find the equations and do the math yourself.

If you want to provide all of the information necessary for the calculations, such as the F:B ratio, forward gain, height above ground, ground reflectivity, length of coax, loss factor of the coax per 100 feet, etc, I might consider teaching you a thing or two.

Until then, there's just not much I can do with your "10dB beam".

As for the other beams, do a websearch. I'm not here to do your research for you.

Just called the shack about switching out these antennas...I see why u want me to get the 21-996....bout 4 feet tall w/ the coiled whip. Anyhow, get this....I cant return the other because they require the original packaging....let me explain the packaging...it was a thinner-than-cardboard backing it was SHRINKWRAPPED to....the thing got torn to hell when i was trying to get the damn thing out.....so i pitched its remains...and now I'm stuck with this fucking thing.....not happy.

So now instead of paying 20 MORE for this better one I'll be shelling out a whole new 50.....so I wanna make sure there's an agreement that I'll be ok with this one...I know given the circumstances it wont be optimal but as long as I can safely and transmit decent on ALL channels (unlike now), I'll be happy.

21-996 look good....anyone agree with Gary.

That is the problem with the new no code extras class of ham, to calculate ERP, wattage output and coax losses if any and db gain of antenna are all thats needed thats needed what does f/b ratio, height above ground, ground reflectivity have to do with a calculated erp figure.

Since you can provide no proof of a 5db 4 element yagi I will consider your statement bullshit. It is the same as me saying there are people living on Mars. you prove there is not .

I noticed you don't want to do any research, and you are correct the 5db
gain 4 element beam was one that you must have built since it is not real
efficient. What do you think you can teach me my dyslexic one?

4068. Re: 11 Meter QRP Contest

Source record: 118430

effective radiated power (e.r.p.) (in a given direction): 1. The power supplied to an antenna multiplied by the antenna gain in a given direction. It is not difficult to determine ERP for a given installation. First you need to know the exact power output from the

transmitter - usually measured with a calibrated wattmeter. Next, deduct from this figure any losses caused by the

duplexer. If this figure is not known, it is acceptable to measure the power coming out of the duplexer. Subtract the power

lost in the feed line. This figure can be obtained from a table of coaxial cable characteristics. This gives the power

reaching the feed point of the antenna. Combine this figure with the gain of the antenna; the result is the effective radiated

power. In short, ERP is a measure of the power aimed in a direction that should be useful to the system.

Calculate Effective Radiated Power
Enter Appropriate data
Power Watts (Transmitter power)
Loss dB (System losses from transmitter to antenna)
Gain dBd (antenna gain)

The effective radiated power with respect to dipole antenna (ERPd) is dBm or Watts.
Calculations were made per the following data: power= Watts, loss= dB, gain= dBd

Note: The effective radiated power is in the direction of antenna gain.

NOTE: NO Mention of f/b ratios, height above ground or ground reflectivity. All these were asserted by SSB The new Fangled Ham.

==========

You forgot about reflected power (if any), the radiation efficiency of
the antenna (which is not the same as antenna gain), RF radiation
losses from the coax (caused by mismatch, direct induction, or
containment failure points), and insertion loss from connectors and
other devices (including any choke that might be used on the coax).
Then consideration needs to be given for any nearby objects, natural
or artificial, that might absorb, reflect or refract the signal. There
are also ground losses, HAAT, polarization,....

That remains to be seen, and I'm not at all convinced they will be so easy to "herd" as you may think. The fact that there are other radio services they can use on the road, and don't seem to make any use of them, would argue against your point of view, i.e - "desire for a quiet channel populated by like-minded people".

---
http://www.boulder.nist.gov/div813/metant.htm
==========

"What is th effective radiated power of a repeater station with 200 watts transmitter power output, 4 dB feel line loss, 3.2 dB duplexer loss, .8 dB circulator loss and 10 dB antenna gain:

a. 317 watts
b. 2000 watts
c. 126 watts
d. 300 watts"

ERP (effective radiated power) - radiated power, allowing for transmitter output power, line losses and antenna gain
---

Effective radiated power (ERP)
Effective radiated power. The product of the power supplied to an antenna and its gain relative to a half wave dipole.

The Toledo Hamfest frequency I will monitor is 146.52 MHz interminably during the time I'm there. For those that don't know it the above frequency is the national simplex calling frequency for the 2m band in the USA. I don't expect to be at there for than several hours starting at 8:00 AM with the group I'm traveling down to the swap. Depending on how things go the above frequency may be monitored on the way down there as well.

In this equasion the answer would be "c" but the problem at hand would be finding a omnidirectional antenna with a true "10db" gain. While allowing for an 8db loss would the "10db" gain would supposedly make up for the loss. You left out the equasion for figuring in the altitude on the transmitter. My favorite broadcast location is right in front of a local observatory from which i can look out over the NYC skyline. Armed with just a straight 4 pill, I can drop right in on Long Island , Brooklyn, Queens, a big chuck of central Jersey, and right on up into Connecticut from this location. Altitude should ALWAYS be figured into the equasion.

4092. Burger King

Newsgroup: rec.radio.cb
Date: 2002-03-17 02:09:20 UTC
From: Smokin Cash <ira20@earthlink.com>
Message-ID: <kVSk8.25371$Vx1.2173401@newsread1.prod.itd.earthlink.net>
Source record: 118354

Just remembered a funny thing.

I was sitting in a Burger King drive threw one night and they ask me to pull forward and they would bring my food out. So when I pulled forward I was now sitting in front of the windows in the "dining room". I was on channel 21 am jabber jawing with a friend a few blocks away when I notice everyone inside looking puzzled. Then I noticed two of the employees pointing and laughing. When my food was brought to me the girl said I was on their PA system inside. I looked at my 96" Francis and about half of it was laying on their gurts from being bent over. The funny part was before I new I was coming over there PA me and my buddy were cutting down this ch19 truck stop slut that had stumbled onto 21. So you can imagine what the ppl in B>K> heard. After doing some research on the radio I had bought very cheap. The TVI circuit had been disabled. After repairing they could no longer hear me. Had fun saying "Hello, Would you like an apple pie with that" every evening for the week before I fixed it. I think they got more of a kick out of than I did.

Just hit me thought I would share.

Enjoy!!

>ERP.They are not the Same

I am confusing nothing. Officially, ERP is the product of antenna
input power and maximum antenna gain. But all the factors involved in
the installation, location and position of the antenna influence the
gain of the antenna -- even the antenna height. The gain figures for
any production antenna are basically useless, since any antenna's
performance is widely variable depending upon the installation. And
that was my point in posting the information.

ERP is determined after the antenna gain has been measured, not read
from a label on the package.

Source record: 118370

Around 3-4 est when I get off work I'm gonna swap out my antenna...I called a different shack n they said they were cool with the antenna switch....so I'm gonna go with the 21-996....I have a few people agreeing with this model now so I figure it'll be worth the shot.

If anyone has objections or other ideas, post now before I do it. lol.

Also, since this thing looks like it's about 4' high, it WILL be going on my trunk, but of course it'll clear the roof n all.....but one question....will this thing be blowing all over the fuckin place? It looks pretty flexible cuz of that coil at the bottom. I cant have it blowing and hitting shit in high winds ya know......I expect it may lean a little..but how much we talkin here?

to check it out go to www.radioshack.com and type in 21-996 in the search.

I'll check back before I head that way tomorrow....15 hours and counting.

Thanks again all.

How does a everday cb operator determine his exact antenna gain? Does he
erect a 1/2 wave dipole and put it one wavelength high and assume that is
the reference of 0 dbd gain and make his measurementas against this ?
Spark,who said anything about reading an antenna gain figure off a package,
I gave SSB a know 10db gain figure to work with and he couldn't come up with
any answers and I know they gave that question on either the general pool
exam and or even the extra exam, surely he would have thought to ask, he
wanted to try and add all types of variables, i gave him the antenna gain it
was 10 db it's placement, height, etc doesnt matter that is already
factored in to the 10 db figure no matter how ever many feet off the
ground, or however close to other objects when is all said and done 10 was
the number, so we have a know figure after antenna was installed ...

You want me to find some non existant equations, you brought them up you cite them or you will be found guilty of fraud by the Keyclown Kangaroo Kourt for makin claims with out proof or basis for fact. What do you do buy a beam and disregard what the gain figures claim? you do your own db gain measurements then right? I mean hell ill bet you got some accurate equipment and some handy equations to perform this Dog and Pony Show sounds like you know exactly what your doing God Bless you son

> If you want to provide all of the information necessary for the

> etc, I might consider teaching you a thing or two.
>
Can you show me the formula for your calculations to solve for erp using items such as f/b ratio, height above ground, ground reflectivity. The best part is you ask for the forward gain, I thought thats what all your calculations were for to figure the true forward gain so the true erp could be calculated.

We are solving for forward gain so why pray tell would and how could I give you a forward gain figure without the rest of the numbers. The best part is that is your arguement to me that you need all this other info to calculate forward gain. So how do you radically change forward gain, element spacing, boom length etc ? none of that would make a difference right?

" Effective radiated power. The product of the antenna input power
and the antenna power gain. This product should be expressed in kW and
in dB above 1 kW (dBk). (If specified for a particular direction,
effective radiated power is based on the antenna power gain in that
direction only. The licensed effective radiated power is based on the
maximum antenna power gain. When a station is authorized to use a
directional antenna or an antenna beam tilt, the direction of the
maximum effective radiated power will be specified.) Where circular or
elliptical polarization is employed, the term effective radiated power
is applied separately to the horizontally and vertically polarized
components of radiation. For assignment purposes, only the effective
radiated power authorized for the horizontally polarized component
will be considered...."

He doesn't. Most hams don't, either. They just use what works best.

> Does he
>erect a 1/2 wave dipole and put it one wavelength high and assume that is
>the reference of 0 dbd gain and make his measurementas against this ?
>Spark,who said anything about reading an antenna gain figure off a package,

I did. The point was that gain figures that were determined by the
factory on a manufactured antenna are usually best-scenario
determinations, and do not reflect real-world figures: "actual results
may vary", "results not typical", "some assembly required", "batteries
not included", etc.

You can't get a real value from a hypothetical variable. If you want
to determine ERP you MUST determine antenna gain by taking REAL
measurements from the antenna as it will be used. You can shorten the
equation by assigning an arbitrary quanitity to the gain, but all you
will get is an arbitrarily-derived ERP, which isn't very useful when
the value must be real.

Exactly, you trust the db gain claims that were given to you "unless it is
a Cb antenna maker and even at that how can you really tell what it is",
set the antenna up as directed by manufacturer or by your own design hell
Eznec works great.

> > Does he

So what do

Sparky the value is not hypothetical it is a given number no different than you figuring the gain out, think of it this way I did the calculations for him and it turned out to be 10 db this was real world figure of our imaginary antenna . Maybe it was a moonraker when we put it up, who cares it has 10 db of gain when it is all said and done, so that means all that info was already taken into consideration, since that is how Antenna Gain is derived. I made it real easy I gave him a figure to work with and he tried to skew the results. Antenna gain is a direct result of many factors I have never disputed that fact. I assigned a figure the same as they do on the Ham exam I was looking for him to calculate an answer, so what do I do let him pick any number he wants out of a hat no we were using 10 db as the number , to get 10 watts of erp how many watts would his transmitter output have to be. Hell I even had Nebo on the roof with no feed line losses radio hooked right up to antenna to make it even more easier, no coax losses. Why are you trying to get into a semantics game for him I don't know? If I tell you a motor has 200 HP what are you gonna say, well it depends on the cam, the type of gas use, the carb, heads etc. No it has 200 hp who cares how it got it or why or whats inside the motor, It is 200 hp engine.
This is the same as antenna gain which is a direct result of many variables, after you have a antenna gain figure you don't say well it depends on height etc. because thats how you arrived at a gain figure by taking into account all that info.

Let me ask you this you have 2 identical horizontal yagi antennas mounted on the same tower, 2 exact feedline lengths, 2 exact swr readings, 1 is mounted at 36 feet high, the other is mounted 72' high all other factors are the exact same. How do you calculate the exact gain of each antenna? How much db gain either higher or lower is the 72' antenna compared to the other. An on the air test will yield who has the higer signal strength but this has nothing to do with the gain of the antenna. The fact that the 72' antenna may get out further has no bearing on its gain over the other So now what ? Maybe SSB will now post those bogus formulas and antenna calculation for our use.

If size is a consideration, upgrade to a 520XL. You will find that this radio (520XL) has quite good sensitivity and you can cut the RF gain back half-way and still receive local stations. An external speaker also helps. I would not want to part with mine. The next step in upgrading would really be a AM/SSB radio...

Yeah Train, I guess I did take it that way. But then again, it's not the first time you've posted moronic drivel in an attempt to piss me off. And yes, I should not have let my temper get away from me.....but God, you're an easy target.

The last time you stuck your nose in a post where it didn't belong, was when you made some comment about a guy getting 137 volts on his AC service, and him stating that was the norm. I told him that was not the norm, and you made some illiterate statement about me not knowing what kind of voltmeter he had or some shit. That time, I overlooked your obvious ignorance, and even reposted what I stated in simpler terms, so that even you could get the jest of what I was saying. It appears that you can only read what is between the lines when the words have four letters or less.

Now then, in this particular post where you once again stuck your big nose, the radio has been for auction for several days, and has been posted to the NG several times. The radio is junk, and has been hacked by someone who had no clue what he was doing. Why else would it need a new faceplate, and an auxiliary roger beep? There is no roger beep board in the radio that can be removed, it's on the board, and just needs to be repaired, but someone chose to include another board rather than fix what is wrong with the radio. The radio is not worth half of the current bid, and hopefully whomever bid that much for it will retract his bid before he gets a royal screwing.

In the future, you may want to buy tennis shoes more regularly, as I'm sure the taste of old dirty shoes and feet in your mouth is not pleasant.

You are now free to go play with your 4 "pill" box, and work all the "DX"<giggle>, on 27Mhz your little heart desires. I'm done with you, for now.

If you don't know the difference, or what those factors have to do with ERP, then you need to go back and read your antenna handbook, or maybe the General Class study primer.

Resorting to personal insults after being asked for more information to answer your question shows that you truly don't know what you're talking about, and you aren't worth my time. For now, until you reach down between your legs, grab your shoulders, and pull your head out of your ass, you can meet /dev/null.

I see that someone taught you to read headers! Cool! Just one question for you? Why did your OE fail to catch the error? Don't have Word? Couldn't figure out how to link the two or enable spell check? Or did you simply reTRAIN spellchecker to what you think the spelling should be? Wait! No! You didn't! Suddenly it hit me! I should have known.....you bought the pirated Ebonics version of Word, didn't ya?

I was there this morning, too.. Great teals on IC-2100H's in building 2.
Almost bought a TNC, but unfortunately it was too old to do APRS, and the
guy wouldn't budge on the price. So I passed on it.

Too bad I didn't see ya, Chuck. Woulda liked to say hello.

Maybe next time

Jay,
I haven't actually killed myself from high voltage, although there was that one time I got bit a little and was hurled to the other side of the room. You'd be shocked by how many folks I've encountered who cut about a foot off an antenna and then wanted to know how to make it a few inches longer. Really. They weren't very good with rf electronics, and they probably wouldn't have made a good carpenter either.

Again you are making claims and cannot back them up. Now you are resorting to insults I have had my given you refrences and you have provided nothing but your opinion which I say you cannot or won't for some reason substantiate. I know the difference It seems you don't and have made claims of formulas and calculations and I have yet to see one yet.

> Resorting to personal insults after being asked for more information to

StrawMan Reply! Where are the personal insults levied at you.? Your time would be wasted since you cannot provide any refrences to back up what you say.

ANTENNA BASICS
The gain or directivity of an antenna is the ratio of the radiation intensity in a given direction to the radiation intensity averaged over all directions.

Quite often directivity and gain are used interchangeably. The difference is that directivity neglects antenna losses such as dielectric, resistance, polarization, and VSWR losses. Since these losses in most classes of antennas are usually quite small, the directivity and gain will be approximately equal (disregarding unwanted pattern characteristics).

Consider yourself indulged.

>If a conversion was available for the HTX-10,

It is.

>How many of these things
>are there out floating around ...

Not many, the mod adds about $75 to $80 to the price of the radio. It also involves a different approach. Instead of attacking the task from the outside in, this requires the reverse approach.

>Mind you this is only a question
>I'masking.

We'll move ahead on that premise.

>Say the conversion was obtained and worked to expand the
>frequency coverage, How many people would want something like this done?

Again, not many! The mod is too expensive for most people's tastes.

>Thanks for your time
>Chris

Not a problem, Chris. Give it some thought and I'm sure you'll come up with it on your own. I personally don't think it's worth the effort. Have fun.

It's a non-cash transaction, Train. The cost...one steak lunch (or dinner) at The Spare Rib, here in Port Jefferson Station. Not a bad deal, if I do say so myself. ;-) Take care and 73.

Because the original poster's actions spoke louder than his words. I do agree that stuff like this shouldn't degenerate into an "us vs. them confrontation." If anything, it presents an opportunity to possibly pull some radioactive people into the fold. I think that's something you may have missed. Take care and 73.

Speaking of condoms...

A young redneck goes into a chemist, walks up to the counter and says to the female assistant "a packet of johnnies".
The assistant says "Look, Son, when you can ask properly, I will happily serve you".
The young redneck walks out the shop, wondering what he did wrong.

Half hour later, he's back again. He walks up to the counter and tries again... "A packet of Johnnies, Miss".
Once more, the assistant says "Look, Son, when you can ask properly, I will happily serve you".
So, once more, the young redneck walks out wondering what he did wrong.

Two hours later, after much thought, the young redneck tries for a third time.
He walks into the shop, slamming the door shut behind him. He then unzips his pants, pulls his penis out and swings it about while walking up to the counter.

He slaps it on the counter, and yells "Wrap it".

Absolutely.
Even if it was made law, don't bet on it stopping them.

Here in the UK, children manage to buy cigarettes - on their way to school,
in school uniform and clearly under-age. Children manage to buy fireworks,
even from their local shops where the trader knows the family.
Trading Standards have run checks by sending children in to buy cigarettes...
but the traders never get busted - they just collect figures as a percentage.
So even those with the power to enforce the law are doing nothing about it.

But you have to wonder if the authorities are prepared to stop certain
trading. If they stop the shops from selling certain products to people who
should not buy them, they will lose the tax from the sales.
The sales will still continue, but on the "Black Market"... and the
government will not see a penny of that money.
I wonder how much money our governments make from illegal sales such
as under-age smokers and fireworks purchased as toys. They have never seen a
penny of the money from the sales of American AM and SSB CBs in this
country... it is illegal just to own one, but there were plenty came over
here.

But, it is not illegal to buy Amateur equipment without having a licence. If
they made it law, that would be a pain in the ass to those studying for their
licence and wishing to listen first. They could insist on a licence when
buying an amplifier, but that would just force the sales onto the black
market.
Believe me, it happened here when they banned the 10 Metre only "Ham"
radios. They were still just as easily available, but all without tax. The
ban was lifted some time back.

3. High SWR.
I have known cases where a mismatch has caused TVI. Simple adjustment
cured the problems.

> I have never heard a bad word on it from Amateurs using
> it on 10 or 12 meters.
===

It comes down to "good housekeeping". Good antenna condition,
positioning and tuning can reduce the chances of these problems...
without spending too much money.

While many of the CBers on here are techs, most CBers will be
non-technical (as the service was intended that way) and so could
easily have problems which may show up more with some
antennas than others, depending on the radiation pattern.

> a hobby get an Amateur ticket.
>
===

Hell, the whole of the UK got it backwards.

We got CB for personal and hobby use, but the UK gov. decided to allow businesses to use it.
The problem was that they tried, and got their fingers burned. Taxis found that the old CBers didn't want them there, it was hard to find a channel clear enough to be reliable, and that their customers were being picked up by other taxi firms before they got there.
You cannot mix business and pleasure... specially on a band of radio frequencies.

> So, how much does the 2SC2312 put out?
===

Are you asking a question, or making a point?
From my "Towers International Transistor Selector" book...

2SC1969
Vce 30 volts
Veb = 5 volts
Vcb = 60volts
Ic 6 Amps
hfe 10 / 180
Ptot 20 Watts

2SC 2312 max ratings
Vce 20 volts
Veb = 5 volts
Vcb = 60volts
Ic 6 Amps
hfe 10 / 180
Ptot 1.5 Watts

Ptot = "maximum permissable device dissipation with case surface held at
25&#65533;C"

So my book suggests that, with correct tuning, they should both give the same
output under the same conditions. But, it would also seem that the "2SC1969"

could be run at a slightly higher voltage to give more output if in a separate (I know, Aaron + George... illegal) amplifier.

But I have to agree that correct biasing is important and should be checked.

Careful Tim, calling them by their first name makes you a "thug".

I wonder why he has such a big problem with his first name?
I can understand John Wayne changing his name... and I believe that the wrestler known as "Big Daddy" has the first name of "Shirley", so it's no surprise he used another name.

Maybe we all have it wrong, maybe Georges real name is Georgina. That would explain his problem.

>
> If its made by man, it can be modified by man. Ten-4!

So true.
It's the same with the fights against hackers, car thieves, etc. You don't eliminate the problem... you just evolve a smarter opponent.

A few years back (quite a few), the 40 channel BCD PLL radios were supposed to be impossible to modify. Well, there were boards made that gave the UK radios something like 5 bands (FM only). Many (possibly most) of the old 40 channel UK radios have been converted to 80 channels.
Those dedicated 40 channel PLLs were not so hard after all... wussys.

You cannot make it impossible, the idea is to make it too expensive too difficult or too damn slow. The opponent may move to another area or field, but they don't go away.
The problems come when dealing with those who do it for the pleasure of defeating the system... they don't care how long it takes or what it costs, they just have to defeat your system.

Effective radiated power (e.r.p.)

This is calculated on the basis of transmitter power,antenna gain and line
loss.

Yep, I'm sure that CB helped in slowing more people down before the BIG wreck there last week. We GOT TO SLOW DOWN in da fog, people!

It's too bad that HAM radio did nothing to help in this incident in alerting others about what was ahead of them, because of the smaller amount of Ham radios out there in cars & trucks. I guess different frequencies are for different folks! Maybe Hams help in long term emergrencies, while CB helps in IMMEDIATE, FAST, in front of you and around you emergencies on the road! CB is the Radio of choice for us ROAD WARRIORS !

Hello All. Ive been involved in the hobby for quite a few years , my all time passion has always been collecting tubed radios and tubed type lenears/modulators, some of the better linears ive had have been "Thunderbolt 305's" and "Pride KW's" and up until about a week ago I thought I had used some of the better boxes out there......Here is a god's honest experience. I subscribe to a magazine that "Betty Bearcat" puts out and in the back of the mag are ad's for used stuff for sale. This fellow had a "Browning Golden Eagle, MK III" 4 sale @ $400.00/mint cond, and used only 2 yrs by his late wife, I figured Id call and see if he had anything else CB related 4 sale. He then told me about 2 Linears he had that were made by a company named"D&A". He said they were 150 watt "Raider's" in "NEW" condition, as a matter of fact, they were NEVER USED, and STILL IN THE UN-OPENED BOXES that the factory sent them in. He said they were "Multi Banded" to operate on 40/20/15/and 10 meter band's, and that he wanted $50.00 a peice for them. It sounded too good to be true, but I figured Ive gotten ripped off in the past 4 more than this, so I bought them. 3 days later, sure as shit they were exactly what he said. I hooked both of them up just to test them for tube output and dried up caps.....everything was perfect, they were keying up @ about 60-70 watts dead key and swinging about 165-180 watts on a peak reading wattmeter. Now when I say "BRAND NEW" I mean it, theirs not a single fingerprint on them, very well made, nice looking too. Can anyone give any thoughts on what their worth? or how they ranked back in the 70's & 80's when they were made? In performance, they impressed me just as much as anything else ive owned in this "Vintage" of amp's. Thanks for reading this post. Good deals are still out there, I guess.....and so are honest people too!!!!!!!! 73. Frank.

They are OK as far as sweep tube amps go, but with the cost of and/or
availability of various sweep tubes, I'd unload them ASAP, unless of course,
you just want to keep them for posterities sake.

4189. Motorola FRS dropped into ICE TEA ! Not a CB!

Newsgroup: rec.radio.cb
Date: 2002-03-17 22:32:50 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3c951c92@news.planetc.com>
Source record: 118501

Yep, a Talkabout 250 was dropped into Ice Tea by a little chillin'. Dried out, still no work. Speaker works; no powering up, no sound or digital. Checked a few small transisitors but gave up. ANY ideas, supertechs? Does it have a "protect" dinky transistor, like the portable SW radios have in them that the power goes through to get to the circuit? E mail me direct or post. This newfangled technology small junk from malasia is enough to make your eyeballs fall out!
Dave!

NYC ICE MAN:
WHERE did the winter go, or the ICE this winter, ICE Man? Winter is over next week and Saturday I was working here in Tenn. with 76 degree temperatures! Where is da winter this year, or is it comming next month? I remember seeing lots of snow in Ohio in early April. What will this lack of ICE have on the CB skip this summer? Since you ARE the ICE authority on da CB NewsGroup, I'm sure you can fill us in! Please prognosticate on da propagation of da ICE as it relates to da Ionosphere!!!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

On Sun, 17 Mar 2002 15:26:36 GMT, "Curious George?"
<bigfoot69@yahoe.comm> wrote:

<snip>
>...Hell I even had Nebo on the roof with no feed line losses radio hooked
>right up to antenna to make it even more easier, no coax losses. Why are you
>trying to get into a semantics game for him I don't know?

Because both of your arguments were based on different definitions of
the same concepts. Instead of spouting the definitions myself (which
apparently some people don't like) I tried to encourage both of you to
find common ground. Obviously, that didn't work.

Your definition of ERP has three factors;

>1) Transmitter Power
>2) Antenna Gain
>3) Feed line Losses
>
>Period

Which isn't exactly true. The only device that is relevant to ERP is
the only device that radiates RF power -- the antenna. Therefore, ERP
is determined by only two factors:

1) Antenna input power; and
2) Antenna gain

Period.

Antenna input power is a fuction of many things, such as transmitter
power, reflected power, transmission line losses, insertion losses,
blah, blah, blah. And antenna gain is also a function of many things.
When Sideband said:

>If you want to provide all of the information necessary for the
>calculations, such as the F:B ratio, forward gain, height above ground,
>ground reflectivity, length of coax, loss factor of the coax per 100 feet,
>etc, I might consider teaching you a thing or two.

you might have answered that your 10dB beam was in consideration of
all those factors, but instead you wrote:

>That is the problem with the new no code extras class of ham, to calculate
>ERP, wattage output and coax losses if any and db gain of antenna are all
>thats needed thats needed what does f/b ratio, height above ground, ground
>reflectivity have to do with a calculated erp figure.

So it's clear you didn't include those factors in determining the 10dB from your beam. On the flip side of the coin, Sideband didn't acknowledge that those factors were determinate of antenna gain, only that they affect ERP (which they do, but are included when determining antenna gain).

So your entire argument with Sideband about ERP and antenna gain was based on ..(gulp).. semantics. The funny thing is that both of you were right, you just had your definitions crossed. And whining about semantics when semantics is the issue makes you sound like Toll_Free.

>Let me ask you this you have 2 identical horizontal yagi antennas mounted on

>are the exact same. How do you calculate the exact gain of each antenna? How
>much db gain either higher or lower is the 72' antenna compared to the
>other. An on the air test will yield who has the higer signal strength but
>this has nothing to do with the gain of the antenna. The fact that the 72'
>antenna may get out further has no bearing on its gain over the other So now
>what ?

Field strength has everything to do with antenna gain. Begin with absolute (not relative) field strength measurements at predetermined arcs, distances and altitudes, and map the field. Add two cups calculus and mix until well blended. Bake in a conversion oven until iterations inserted into the center come back clean. Remove from oven, round off the corners, garnish with polarity specifications, and serve hot to the FCC. If you want more specific instructions go take an EM class.

Sparky your trying to nitpick again how many cb and or ham or even other
radio comms systems hook up directly to the antenna with no coax? Thats why
the coax losses is usually mentioned. If you look up erp you will see the
defenition that I gave so I am assuming there is some sort of standard
there. The antenna input power comes from a transmitter, antenna gain comes
by design. Honestly If you can find me an instance where it states antenna
gain changes with height above ground I would like to see it also. Antenna
range would definatly change but so far I have yet to see it said anywhere
other than the NG.

> Antenna input power is a fuction of many things, such as transmitter
> power, reflected power, transmission line losses, insertion losses,
> blah, blah, blah. And antenna gain is also a function of many things.

And you can take it a step further then and transmitter power is a result of volts and amps.

> When Sideband said:
>
> >If you want to provide all of the information necessary for the

>
> you might have answered that your 10dB beam was in consideration of
> all those factors, but instead you wrote:

And he only had to answer what the coax losses were since i gave him a antenna gain figure, which takes into to account all those factors, otherwise we cannot give a gain figure. So I gave him an arbitrary gain figure of 10 db thats what his calculations should have been based on why would he need to know any other info other than coax losses? I gave him the gain figure?

Did he think I was reading it off a box and he had to disapprove of the maufacturers claim? then he goes on to say "If you want to provide all of the information necessary for the calculations, such as the F:B ratio, forward gain, height above ground, ground reflectivity, length of coax, loss factor of the coax per 100 feet,etc,

I gave him the number already there was no calculation on antenna gain for him, It was 10 db. he just needed to figure transmitter power to keep ERP at or below 10 watts.

>
> >That is the problem with the new no code extras class of ham, to
calculate

> from your beam. On the flip side of the coin, Sideband didn't
> acknowledge that those factors were determinate of antenna gain, only
> that they affect ERP (which they do, but are included when determining
> antenna gain).

I didnt need to include those factors that I gave for the figure of 10 db for him to work as you said they are determinate to antenna gain. It was supposed to be a mathematical equation for him to figure out. And he turned it into a side show the question was no different than whats on the amateur exam they give you the gain and the coax loss as well as transmitter power. And I still say f/b ratio has no bearing on erp, directivity in one direction does, nor does antenna height above ground I have yet to hear that a 1/2 wave dipole whch is used as the reference if you raise it to xx amount

of feet it will now have more gain than it would at another height. They use the word Free space. They are all after products the antrenna has xx amount of gain and these things may degrade the performance of the antenna after the fact.

> So your entire argument with Sideband about ERP and antenna gain was
> based on ..(gulp).. semantics. The funny thing is that both of you
> were right, you just had your definitions crossed. And whining about
> semantics when semantics is the issue makes you sound like Toll_Free.

My definitions were not crossed Sparky I gave him a gain figure which as you want to say includes everything he stated, so that being the case I gave him a figure that included all he asked for All I ask if for some references to cite what both of you claimed and so far I see none of it. I think I proved that what I said Is pretty standard stuff. He just wanted to make it into an arguement by asking for relative figures which determine antenna gain when I already gave him the antenna gain which takes into consideration all the factors which make up antenna gain.

>range would definatly change but so far I have yet to see it said anywhere
>other than the NG.

The input impedance of the antenna changes according to ground, which
would change the reflected power, and therefore the antenna's input
power. It also changes the resonant frequency of the antenna. Need
more?

>> Antenna input power is a fuction of many things, such as transmitter

It was clear he didn't understand that your gain figure was inclusive
of the installation, which is why he asked. But your response was that
those factors had nothing to do with the discussion, so I don't think
you understood it either. Quit backpeddling.

I'm not interested in typing up several pages of instructions and
formulae. If you want to learn how to determine antenna gain then you
will have to learn it from another source. However, if you want a
couple good sources I will be glad to help you out there. First, your
local public library. Second, IEEE publications on the subject.
Depending on how fast you learn it will take you from a week to a
month... I'll wait.

Ok, I Know This Question Has Been Asked A Hundered Times....Some Say Solorcom2000, A99, Maco V58....These Seem To Be The Most Talked About ! Now, I Dont Run An Amp & I'm Using A Mobile Unit In My House (Cobra29LTD) With A 0-30V / 5 Amp Power Supply & A K40 On A Tin Roof , Fed With 36' of 9913F Coax. I Want A New Antenna...I Listen To Both CB (27 mhz) & (145 & 154mhz Range On Scanner) I'm On A Budget But, I Know "You Get What You Pay For" So...Any Idea's On What I Should Choose ? Just Recently I've Read Some Thing's About The IMAX2000 In Here..& I've Seen The Maco V58 Wow ! It's Huge !! But I Have The Space To Put Up What Will Work, So I Dont Care As Long As What I Choose Work's ! Thank's In Advance , DW.

I put my current antenna on my roof remember? Well...it's 27".....I work downtown...and I park in a garage....today, first fuckin thing I hear pulling into the garage...BOOM.....that antenna was hitting every damn concrete covered beam till I got to my spot (on the ceiling of the garage)....JUST a little...didnt knock it off but you could tell it was leaning it back and then the magnet would snap it back in place....

So if I go get this one that's almost 4 feet...even if it's on my trunk, am I gonna be in trouble with the garage's low clearance or because it has that spring coil on the bottom with it have enough flex to not be a problem?

> ANTENNA BASICS
> The gain or directivity of an antenna is the ratio of the radiation
> intensity in a given direction to the radiation intensity averaged over all
> directions.
===

Maybe your idea of it, but read this and weep...

<quote ref="The ARRL Handbook 1999" page="20.2">
Gain is expressed in decibels, and is based on a
comparison with a "standard" antenna - usually a
dipole or an isotropic radiator.
</quote>

Nothing there about referencing gain to the antenna being tested, or
averaging anything.
Quite simply, it is the gain over another antenna, so the dB figure must
state the "standard" antenna used to compare against.

===
> Quite often directivity and gain are used interchangeably. The difference
> is that directivity neglects antenna losses such as dielectric, resistance,
> polarization, and VSWR losses. Since these losses in most classes of
> antennas are usually quite small, the directivity and gain will be
> approximately equal (disregarding unwanted pattern characteristics).
===

<quote ref="The ARRL Handbook 1999" page="20.2">
The gain of an antenna is closely related to it's directivity.
Because directivity is based solely on the shape of the
directive pattern, it does not take into account any power
losses that may occur in an actual antenna system. Gain
takes into account these losses.
</quote>

So, directivity and gain are not equal, and cannot be interchanged...

Directivity compares the power in different directions, and needs no other
antenna to reference to. Gain compares the power in *one direction* (that of
maximum radiation) with the power transmitted from a reference antenna, so
requires the use of a reference antenna to compare with.

Also, according to the above reference, directivity does not account for losses while gain does.

If you don't like the ARRL Handbook quotes, I can give you quotes from the 23rd edition "Radio Handbook" (William I Orr) and "Practical Radio Frequency Test & Measurement" (Joseph J. Carr).

Brainbuster.

An old guy I knew once when I was younger got ahold of a CB and had no antenna but the one on his roof, which had a rotor. I hooked a coax to it, and it worked like a beam - that was the only problem with it - it was too directional. It worked great, though, as he lived on top of a hill.

What's up with the fiberglass? Lose the fiberglass, get a stainless steel, and set your SWR on channel 19 or 20.

"Axl" <no@idontthinkso.com> wrote in message news:HFNk8.160470$Hu6.36707812@typhoon.neo.rr.com...
posting twice in case anyone misses it in the other header:

Alright, it's up on the roof and here are my general readings:

(excuse me if I dont list these in proper technical terms)....ok according to the SWR:

CHANNEL READING
1 1.3
5 1.2
10 1.3
15 1.6
19 1.9
25 2.4
30 2.9-3.0
35 Over 30 in the red zone
40 Over 30 in the red zone

So, my channel 19 is much improved but I'm still doing no good on the higher channels, which still leads be to believe the antenna is still too long, correct?

Now, I also just fucking hate it on the roof just cuz it looks bad and at this point I will consider switching out antennas...and if I do so I'd rather still try n base it off of the trunk rather than the hood, even if it be a longer antenna....now Gary mentioned the trunk lip mount....keeping away from magnet-bases, I assume this is my only other option?

Chevy, I'll make note of those antenna models but where do I get them? Around here seem the only place i can find anything IS at radio shack.....think they have anything comprable? (http://www.radioshack.com) If they do I could always try n trade this one out for another...

If anyone sees a decent one listed on the shack's page let me know or maybe suggest where I can find another.....another reason I would rather do a trunk mount is just for the sake of running the cable...much easier to go in thru the trunk than slamming it in the fucking car door while it's on the roof lol.

Thanks for helpin me out all..I'll be checkin back soon.

The problem isn't so much that they sell them, but they sell them without license verification. You've got to have a license for 10-meters. Go to a Radio Scrap and try buying 10-meter stuff even from them, and they'll make ya come up with a ham ticket before they'll sell it to ya. Truck-stops just sell whatever they can push across the counter (at a higher price than anyplace else - they figure you need it, you're there, you'll pay for it). They also sell tire-thumpers, and in some places, those are considered illegal (could be used as a weapon - DUH!?)

"FinalOutput" <finaloutput@aol.com> wrote in message news:20020315174819.16220.00001559@mb-fm.aol.com...

It seems that the FCC is actually Targeting HF or "10" meter radios that have the 40ch USA Citezens Band already memorized & "Hidden" in the radio, waiting for a jumper or plug to "restore" it.
The Icom, Yeasu, Kenwood, Alinco & Ten Tecs, while also easily modifiable, don't automatically "pop into" a pre-memorized 40ch CB mode simply by doing the mod, like a Galaxy, Lincoln or Connex will.
The Problem, however is that there has never been a rule change to justify
any new crackdown. These radios, as imported unmodified, were always considered "Legal" by the FCC, & there were actually some high profile "Busts"
in the early 90's (A-1, Ranger ect) where the FCC confiscated & fined for 10/11M amps & Full 10/11M "export" radios, but allowed these same companies to
keep & sell their Galaxies & Rangers, because they met all current written regulations as 10M rigs.
Also, the FCC has had many dealings with RCI, Galaxy ect, know exactly who
they are, & yet make no effort to stop their radios from being imported.
The FCC rules are very specific on Amps, for example , no HF Amp will be FCC approved for import or sale if it is capable of amplifing 24-35Mhz as sold,
and/or will reach full power w/less than a 50w input ect.
YET, the FCC has no specific written reg about 10M radios!! They could
easily amend the regs "overnite", to say "No 10M/HF Radio can be offered in the
US if it contains a 40ch selector switch, or it's internal memories are configured in banks of 40ch". This would effectivly eliminate or drastically
reduce the most popular bootleg radios.
Why haven't they done this by now? It seems they are almost "in on it", that

they knowingly allow thousands of these "40ch" 10M rigs to be freeely
imported
by Galaxy, Ranger & others, & openly Distributed to virtually all major
wholesalers & dealers in the country, & seem content to just hassle a small
few people & the odd truckstop or 2 each year, while knowingly allowing the
main "problem" to continue.!

If you are willing to have the antenna off-centered on your roof, a
solution may be to put it close enough to the driver-side window to
roll down the window and reach up and detach it by hand and pull it
into your car/truck as you approach the parking garage (use the same
method to put it back up when you leave the parking garage).

As the co-owner/operator of a 220 Mhz repeater, I share your frustration
for the general lack of good 220 equipment (Including multiband
antennas). Part of what makes 220 appealing for me is that it has
similar coverage to 2 meters, yet has many less people competing for air
time.

That being said, I can understand why the manufacturers chose not to
actively market 220 gear. It's strictly a marketing/business decision.
220 is not a ham hand in most of the rest of the world, and isn't overly
popular (especially after the FCC took the lower 2 Mhz away) in the U.S.

This in one reason why ham radio is no longer on the forefront of
technology anymore. In the past, technology was sufficiently simple
enough that most hams could homebrew something and prove the concept
before the manufacturers decided it would be worthwhile to market (READ:
profitable).
Today, modern digital techniques are far to complex for most hams to
homebrew. We have become almost a captive audience for what the major
ham equipment manufacturers decide to market to us. They won't develop
and market, for example, a 900 Mhz digital spread spectrum radio, unless
there is a market for it. And there won't be a market for it until

people start playing with the technology. A chicken and egg scenario.

But it's nice from a repair standpoint, that most CB radios are still being built using 1980's technology. Nothing worse than trying to unsolder a VLSI chip, and a plethora of surface mount devices, with just a pencil iron.....

Your point is well taken. There are clever people out there that can
"trick out" even a rom-coded PLL, in a closed loop (single crystal)
radio. However, most of those mods are a bit of a kludge, and while they
may be a bit liberating, by giving "40 up and 40 down", they are not a
threat to ten meter operators.

Back in the "old days" when modifying a CB rig was the only way to get
"extras", the design of the radio limited the total amount of channels.
Power output and receive sensitivity started falling off rapidly above
27.900 (or way below channel 1, depending on where you wanted the radio
tuned). Since there was no good reason to get on 10 meters, the effort
to further broadband the radio, was usually not attempted.
With this in mind, the proliferation of "freebanders" was pretty much
contained to the 26 - 28 Mhz spectrum. While this was definitely
illegal, it did not bother that many people, and did not attract as much
attention from the FCC.

So-called "export" and "freeband capable" 10 meter radios changed all
that. Now you have a radio that will run from 26 to 30 mhz with full (or
almost full) transmit power and receive sensitivity. By simply changing
a band switch, you move to another channel, which is much quieter than
channel 19. The fact that it might be on 10 meters, is irrelevant to the
user. Many probably don't even realize where exactly they are. But if
it's there, then they will use it.
I'm sure that most truckers are not out to trash the 10 meter band. They
just want a clear place to yack off of channel 19. I'm sure they don't
care if that clear channel was 10 channels below 1, 30 channels above
40, or on 10 meters. They just want a "quiet channel".

If we manage to halt the import of these wideband radios, and return to less capable modified CB's, the 10 meter incursion problem will go away on its own.

Then on the flip side also the very same digital technology should make it easy to add the band as well. The Yeasu rep gave me some crap that they would need to add another power amp to the FT-847 if they added the band. I pointed out they already have a 2m amp that works fine and may work on 222, and the 70cm amp section would most definably could do double duty on 222 with a bit of gain control. The only thing that would complicate things could be the filtering on the input and output. Other than that I don't see a reason not to do it.

> Today, modern digital techniques are far to complex for most hams to

> a pencil iron.....

And that may well be the answer to fixing the problem with people modifying CB's for out of band operation. Suck up all of the frequency controlling circuits in to one VLSI chip with all of the programming etc. That would be better than filling the boxes with epoxy to stop the pirate modification mess.

You forgot that antenna gain varies around the antenna so you also need to know the gain pattern to determine the ERP at a particular point in 3D space. The ERP off the end of a simple dipole is nowhere near what it is broadside to it for one example.

It is relevant to ERP since transmitter power is part of the equation.

> It was clear he didn't understand that your gain figure was inclusive

> you understood it either. Quit backpeddling.

So because he wasn't clear then I am wrong as well as I stated antenna gain
is the function of many varibales, to come up with a gain figure those
variable would have to be met. He just wanted to create an arguement It was
cut and dry. 10 db gain he wanted toshow us how smart he was.

>You never answerd the question Sparky? Don't get like Toll Free on me.

You won't hold up to the standard that you ask of others Sparky, you made claims then provide no references to what you say. I provided sources and just asked you to back your claims with references now it is too hard to do that.

This thing is 4 feet long though...doesnt sound like it would be that easy
to do just because of its length...and i already have decided its not going
on the roof just so it doesnt look completley awful

Again, since it has a coil at the bottom, if it'll give when it hits these
beams, without dismounting, i could care less.

Sure,

I'm trying to think of a good place in NJ? Ground Round on Rt. 17
perhaps? Or we can split the difference and make it in Manhattan.
Chinatown's always a rip in the morning. I used to make the hour trip
just to enjoy some Dim Sum. While were in the area, we can dip on over
to Barry's Electronics on Broadway. It happens to be right in one of
my favorite neighborhoods, Soho. (South of Houston - pronounced
HOUSE~TON.) Plus it's only a few bolcks away from Chinatown.

I have a funny story concerning Barry's. Back in the 80's, I went
there to buy some coax and a Unadilla balun. Well, I was looking
around and noticed that the only CB they had was a Cobra 148GTL. I
asked if they had any others. Anybody who knows or remembers the old
(BTW, the business has NOT changed owners.) "shopkeeper," knows the
ornery disposition of said individual. After a snide CB related
comment and an unsolicited statement about how he wouldn't sell a rig
without eyeballing a valid ticket, I bought my gear and left. (BTW,I
eventually befriended this chap.) Well, while pulling a NYC assignment
two years ago, I happened to mosy on in there. What a difference!
While they will NOT mod any radio for you. There are RC-2950's, echo
boxes and mics, Texas Ranger CB's, and Artsci mod books galore. I
chatted with the current "shopkeeper" and reminisced about old times.
This is when I found out that the ownership had not changed...just the
times had. He tried his hardest to sell me an IC-706MkIIG for about
nine bills. (Really good price by NYC standards.) "Don't you want to
see my ticket?" I asked. "Nope, just you money." It's a nice place,
you'll like it. But it goes to show you, money talks...and B$ still
goes the way of the dinasaur. I'm glad they won't perform mods, but
the rest?...I'm not sure yet.

BTW, the underground electronic market is right on Canal Street. You
can get just about any electronic component or device there. We'd have

to pass it on the way to Barry's, but be prepared. Some of these shops
can be pretty dingy. Lemme know. Take it easy, Brian.

The ratio of maximum power density to the average power density over the
entire space is the numerical measure of directivity.

http://www.ictp.trieste.it/~radionet/1997_workshop/wireless/notes/sld030.htm

>

That is funny the Us Navy seems to think that they are in fact the paragraph I posted was directly from there page.:
http://ewhdbks.mugu.navy.mil/ANTENNAS.HTM

Furthermore the paragraph you posted backs up what I said directivity doesn't take into account antenna losses, but why not read the same paragraph in the ARRL Book only a few sentences down which states:

<quote "For many of the antenna systems used by Amatuers the efficiency is quite high (the loss amounts to only a few percent of the total). In such cases the gain is essentialy equal to the directivity" (end quote) Seems like the ARRL handbook also agrees with my statement after all gain is essentuialy equal to directivity. .

>
> Directivity compares the power in different directions, and needs no other

> Also, according to the above reference, directivity does not account for
> losses while gain does.

Antenna gain is a function of directivity. High gain is achieved by narrowing and lowering the radiated beam, making high-gain and wide beamwidth mutually exclusive. Gain is measured in dB's referenced to a theoretical radiator having equal gain in all directions (isotropic radiator = 0 dBi).

I wonder if for no better reason than the human motivation -- the need for
the quiet channel or the one populated by your fellow tribesmen -- will
not go away with the rigs. I think some form of trucker band is the only

long-term answer. One can argue any number of considerations and Leland and I have but this one is mildly skewed by a perceived need to cover legal channel 19 as well as Fantasyland. It may well be that this is what has kept the truckers off 2 meters or the marine VHF area as long as it has as well as FRS and GMRS. Similar fiascos occur in the Gulf and Alaska on marine freqs for much the same reason.

4277. Re: 3 Things needed to determine ERP - No, you need four

We have 2 radio stations One has a maximum ERP of 100kw, yet covers less
than half the geographical area of another one that also has a maximum ERP
of
100kw, over similar terrain. Why? Because the former uses a directional
antenna. The maximum ERP is indeed 100kw in the main lobe, but is less in
all other directions around the antenna than its omnidirectional
counterpart.
